Some religions exist to help form a more just and moral society. The promise of eternal reward or punishment in an afterlife, based on actions committed in this life, is one way to convince people to behave better.

>"Holy books" tend to stress stories and actions which reflect that
>particular religion's cultural values, morals and societal ethics. To me, it
>seems ridiculous to try and use any "holy book" to rationalize war,
>oppression, slavery, and racism, yet many people find certain passages in
>their "holy books" to try to do just that.
>
>There are enough passages in many "holy books" to justify shunning them as
>something to model one's life after (unless you happen to be the "cafeteria"
>type when it comes to adherance of a chosen religion's tenets- picking what
>you like about it, and rejecting what you find disagreeable).

Seems to me that such a method is preferable to blind obedience to an unquestioned dogma.

>Yet, if you
>really read them, most "holy books" tend to reflect nothing more than the
>same tired old story of humanity, don't they? Sure, there are stories of
>compassion and love for one's fellow humans, but they are to be found
>interspersed amongst annals of war, strife, getting ahead of others,
>persecuting those who believe differently than you do, the hoped-for and
>eventual triumph of certain people or religions over others, etc. All while
>trying to somehow fit in the concept of some Supreme Being who will
>eventually justify it all.

I think the real problems with most "holy books" are:

1) We don't have the cultural background to understand all the nuances and implied meanings.

2) They are way too long and sometimes self-contradictory. (See my rant on the two creation stories in Genesis, in another thread).

3) Some people take them literally, even when not meant to be. Others are willing to kill each other over interpretations of minor points.

4) (This is the biggie) Most are frozen in time, unable to be revised as new information comes to light.

>Who knows the truth for sure?

God. Or rather, God IS the truth.

So for any human to claim to know the truth for sure is a form of blasphemy, really.

> I certainly don't.

Me neither. The person to watch out for is the one who claims to know the truth "for sure", and who wants to force it on others.

>I have come to the
>conclusion that people choose to do good in spite of religion, not because

>of it.

Some people, anyway.

>I don't know if there is a life after this corporeal one. I don't think I
>*can* know. That's the essence of being an agnostic. It's not that I
>*don't* believe in a Supreme Being- but, if there is one, then I very much
>doubt that he/she/it would fit entirely under the auspices and creeds of one
>singular religion. Personally, if I were the Supreme Being, and I had
>created the universe and everything and everyone in it, I'd be mightily
>pissed off at what some people did in my name and then claimed that I
>ordered it.

One of the probelms I see in many religions is the tendency to define God as a "person" - just sort of a magnified, more powerful image of ourselves. Another is the division of the universe into "natural" and "supernatural", as if there were some sort of difference.
>
>Anyway, since I'm not sure whether or not there is an afterlife, I try to
>treat others the way I'd want to be treated, for as Jesus said, this "sums
>up the law and the prophets"-- Matt. 7:12. It just makes sense; that's why
>so many religions have this "Golden Rule" at their very base (or at least
>claim to). Living by this principle makes life more pleasant for EVERYONE
>involved on this planet, irrespective of culture, creed or socioeconomic
>status. This same principle is also expounded upon in the Buddhist principle
>of "karma". Do good in your present life and you get rewarded in your next
>incarnation. It's also to be found in Judaism: "What is hateful to you, do
>not to your fellow men. That is the entire Law; all the rest is commentary"
>(the Talmud); "No one of you is a believer until he desires for his brother
>that which he desires for himself."- a hadith (saying) of Muhammad.

Also logically proven by Hobbes - a society without this rule will not do as well as one with the rule. If a society without it can survive at all.
>
>Now, of course, many people who claim to follow a certain religion don't
>always act in the ways their prophets or their version of "God" told them
>to, so that makes me think that either these groups don't have a direct line
>to the Almighty, or maybe the concept of "religion" as a way to understand
>the unknowable itself is flawed.

No, it's just that people aren't perfect. They make mistakes and have weaknesses.

>Either way, to me it means that religion
>cannot lead us to the Great Answer of who, or what, is "up there"-- or help
>us to know if there *is* anyone "up there".

All depends how you define God. I don't think of God as being "up there" or separate from the physical world at all. For example, think of all the laws of physics, chemistry, mathematics. To me, these rules are a part of God - a tiny part of God, but still a part, or perhaps an expression of God.
>

>I like good old Abe Lincoln's personal definition of religion: "When I do
>good, I feel good; when I do bad, I feel bad. That's my religion." That's
>mine too.

If it makes you strong and kind and healthy and happy, I say live by it.

>I know this doesn't have anything whatsoever to do with amateur radio...
>however, since the topic was brought up... :-) Sorry. That's all I'll say on
>this subject.

Actually, there is a connection:

For thousands of years, people had no idea that such a thing as electromagnetic fields existed, or could exist. Nor relativity. Everyone "knew" that Time was a uniform, unidirectional dimension that was the same for the entire universe.

People accepted the explanations of Aristotle/Ptolemy/Kepler/Newton in their turn. All were blindingly obvious once revealed, particularly Newtonian physics. Everything appeared to be knowable and straightforward.

Then about 150 years ago, folks like Maxwell, Hertz, Einstein and many others began to discover all sorts of odd phenomena. Fields of energy that could not be directly detected by any of our senses were shown to exist all around us. Time was shown to be dependent on the observer's frame of reference. The speed of light was shown to be not only tremendously high, but also the same for all observers - as Time was once thought to be. All of these things were shown to be true through ingenious experiments. None of them were predicted by any religion I know of, nor described in any "holy book".

In short, the Universe was shown to be a far stranger place than anyone had previously guessed. Even so, humans learned to harness the new phenomena and use them.

For most of human history, if someone claimed to be able to instantly communicate over vast distances using only some strange apparatus, they would have either been locked up as insane, burned as a witch or revered as a god or prophet. Yet today, and for almost a century, we radio folks do such things without a second thought.

The possibility of radio was there all along, of course. Who knows what other undiscovered phenomena exist, waiting to be discovered?

Perhaps our "purpose" here is to make the discoveries, so the Universe can know itself.

Ya broke da code.

Here's another one:

For many decades, married couples where both people work have paid a "marriage
tax" or "marriage penalty" to the IRS. And it's not small change for most
middle-class folks, either.

This was partially offset by a refund/credit program insituted under the Carter
administration. It was promptly removed under Reagan as part of the "tax
simplification" that "got government off our backs". When Papa Bush campaigned
for "family values", d'ya think the marriage tax was considered? Nope.

And child labor laws, and why school is mandatory for kids between certain ages.

If I had my druthers, public school would extend from preschool through Ph.D level - all free. But above the high school level, you'd have to make the grade to stay in school.

Heheheh... maybe I should do that, since I don't have a door either. But we are soon moving out of our present office space, and I've heard this rumor that I might get a door- finally. Been working there almost five years, it's about time!!

I'll buy that! But in practice, raising the cost lowers the demand: if it takes "lots of work" to fire anyone, then firings will become much rarer. You're morally right to charge negligence when a supervisor fails to do so, but it's still a fact of life that even a highly motivated supervisor will fire many fewer people when the bar is raised so high.

Another side effect is that there's a long time delay before firings take effect. So the baggage inspector who can't spot a pistol on an X-ray, even lying flat, will be checking bags for months and months before he loses his job.

I hated those classes in college. But it turns out you need to be
able to write well enough to get your boss and his boss to
understand what you have accomplished for the company.
Something like chem lab reports. So English class is as
valuable as that digital circuits class. The subject material in
English class may be lame, but that material is just what the
English prof is familiar with.

OK, I'll stand corrected on fine detail explanations.

I don't remember that a Restricted 'Phone ever needed any
test. It was a Permit, not a license, yes? Or is that going
to evolve into some Roaring Rant of a new sub-thread?

> The Commission added two other licenses for
> the required Global Marine Distress and Safety System radio

Thank you again, Phil, but didn't you leave out the orbital
characteristics on the Inmarsat for GMDSS? :-)

Note word "permit." Is that newly defined as a "license" which
requires a TEST? :-)

TESTS seem to be the ultimate thing in AMATEUR radio...
right behind that "necessity" to be an expert 1930s style
morseman. Must be the very biggest hurdle in any ham's
life, yes?

>> Keeping a certificate in a safety deposit box is VIRTUALLY
>> the same as RETIRING it.
>
> No different from hanging it on the office wall.....

In general, true. Wouldn't you say that wall hanging attracts the
eye more than a building housing safety deposit boxes?

Fancy looking certificates and licenses on a wall announce
something: The person who hung them expects to be admired
for achieving same, praised, and generally getting sucked up to.
In the case of professions of law and medicine, those are there
to inspire confidence that clients can be separated from money
painlessly, yes?

There's some gorgeous certificate making programs available
in larger software stores. Anyone can have a neato certificate
in their choice of fancy frame. Ought to impress the hell out of
neighbors and casual friends. If the wall is an outside-facing
one, hangings can add a fraction to the insulation from cold.
Otherwise the fancy certificates don't DO anything, do they?

>> Radiotelephone licenses are nice
>> keepsakes for some, I suppose, but times change and they
>> aren't much needed in the larger world of today's radio.

> because the job includes assignability to service such transmitters
> licensed to the State.

Hello? Can anyone read "aren't much needed?" That's not an
absolute statement, is it? If it were, how many "California Radio
Shops" are there doing handling State radios? Compare that to
all the OTHER radio shops handling PRIVATE or BUSINESS
radios. How about radio manufacturers that do repair?

How does a certificate fix or adjust a radio? Answer specifically.

Well, if push comes to shove, no problem. I just go to the bank
and yank out that commercial license. However, I don't see any
immediate need to do that nor change black, grey, or beige
radio boxes in very official state police cars or bikes. How do
amateur radio licenses stack up to allowing lawful fiddling with
official state police radio boxes? :-)

Your witness, counselor...

Yes, you are coorect taht it's a permit...not a license.

>Or is that going
> to evolve into some Roaring Rant of a new sub-thread?

Not unless youa re about to create yet another "see...people CAN communicate on HF without Morse Code" rant. THTA'S where the winding, twsiting threads come from.

>TESTS seem to be the ultimate thing in AMATEUR radio...(SNIP)

Only because you are an idiot and HAVE NOT PAID ATTENTION!

The RADIOS are the ultimate thing in AMATEUR Radio, Lennie...The RADIOS!

(UNSNIP) >Must be the very biggest hurdle in any ham's
> life, yes?

No.

>Fancy looking certificates and licenses on a wall announce
> something: The person who hung them expects to be admired
> for achieving same, praised, and generally getting sucked up to.

From what you present here, Lennie, it's the only way you'll EVER get "sucked"...up, down or laterally.

As for me, it's a reminder of whjat I can achieve when I put my mind to it, and I am alsways motivated to do better/bigger/faster, etc.

That you brag in here continuously about who or what you think you are is YOUR certificate, looking to be admired and sucked up to.

The problem is you have never leared how to "play nice", and if everyone doesn't suck up to you, then SCREW everybody.

>How does a certificate fix or adjust a radio? Answer specifically.

YOU answer specifically, Lennie. This thread was addressd to you. YOU have yet to answer the question, ergo YOU ahve absolutely NO right to make any demands of anyone else in this thread until the challenge is met.

Still waiting...your credibility still ZERO, Herr Putzmann.

I understand that. But my original statement would also require a HUGE
inrush of new hams to use up all of the existing callsigns available under
current callsign structures. But I don't see that happening all too soon.

Apparently, Davidson County in Tennessee is issuing some sort
"radio license." I saw one this weekend, and they look official.
It matters not they are legal, since the "licensees" believe they are.
Got in a heated discussion with one guy. Told him it wasn't worth
the paper it was printed on. He assured me it was and he is running
a low power FM station, using his "license" to broadcast.
Watching how far this "license" thing will go should prove to be
interesting.
And for the cynics, no it is not a troll, just an item of interest to
people interested in radio things.

> Then, severely restrict anyone who would broadcast on the ham bands.

A bulletin is not a broadcast. Broadcasting is defined as a transmission to
the general public. The entire term 'broadcasting' in in-correct in any
aspect of Amateur Radio...since it is illegal...period.

K1MAN and W1AW share one and only one thing in common concer ing the
transmissions. They both use radio waves.

W1AW has a special place with the FCC because it has earned that privlidge.
Did you know that during WW2 when ALL HAMS were shut down that W1AW was
allowed to transmit its bulletins?

You see the ARRL has earned the respect of the FCC by helping the FCC
'control' amateur radio. Some of this is good and some is bad. But my dear
sir...the ARRL is ALL WE HAVE.

If you don't like the ARRL thats fine....Im sure it is tearing them apart
that you dont. I don't support a lot of things they do or have done. But
it beats the alternative...no representation at all.

Phil:

In my experience as a supervisor in the Air Force, I will affirm the above statement. While stationed in Germany, I even managed to get a British national civil service employee fired -- something that was, at the time, considered to be metaphysically impossible. All it took was over a dozen well-documented and witnessed infractions, and he was out. You're correct. Most supervisors put up with poor employees because they're too lazy to get rid of them, but it is eminently doable.

A YL friend of mine is now working as a TSA Security Screener at the Indianapolis, IN airport. She has already told me of several cases where screeners were fired virtually on-the-spot. Of course, 100% of their workforce is still within their 6-month probationary period, so it may just be easier now due to that fact. However, I would hope that there are special work rules pertaining to the screeners in order for their supervisors not to have to be saddled with the lazy, unmotivated ghetto and trailer trash that I am used to seeing at airport security checkpoints -- usually more preoccupied with raucously shucking and jiving with each other, filing their 3" fake fingernails, or talking on cell phones than in attending to their checkpoints.

Lennie, you've responded to two other posts in this thread without
answering the initiating question.

The question was raised in response to YOUR assertion that an Amateur
Radio license "does not come close to the possible frequencies, modes or
modulations available to the rest of the radio world".

You made an assertion. I am asking for you to substantiate it. YOU are
the alleged professional, so I am ASSUMING that you had SOME facts with which
to make it. True professionals do NOT make such public assertions unless there
is something to back it up.

Shall I type it slower?

Would you like for me to have a "Hooked On Phonics" kit delivered to you?

Was this just an emotional outburst, foolishly uttered in the midst of
newsgroup combat?

Still waiting. Where's the answer?

On the ham bands? I know that certain locales are assigned certain UHF frequencies which they can do whatever they want to with, but for the ham bands? There's no question in my mind as to the legality (in this case, the lack thereof) of that.

That was my thought. The original poster said something about "low power FM", so it does not appear to be an Amateur band impact, but it certainly could be if not brought under scrutiny.

CAP is an example of an oranization that issues it's own "callsigns". We are under NTIA, and as a whole authorized to operate on assigned federal frequencies. There is no "license" per se issued to us, only "authorizations" by appropriate officials. CAP uses tactical callsigns, not traditional "K" or "W" prefixed calls like FCC issued calls would.

New York City had that when I went to school there in the Dark Ages.
There was no tuition at City College of New Uork and its sister
schools (Brooklyn College, Hunter College, Queens College) for any
resident of NYC who graduated from a NYC school with an 85% or
better GPA. My two brothers and lots of friends took advanatage of
that as would have I had I not snagged a full-tuition scholarship to
a much smaller and tougher engineering school in NY. Grad school at
CCNY et al was also free, but for the three of us, grad school(s) at
private institutions came out of our own pocket.

Sadly, that free tuition aspect of CCNY et al (now all lumped into
a "City University of New York") is all gone.

Hey Steve, Lennie doesn't love you any more so why don't
you stick your head back up your ass and shut up? We are all
tired of your crap.

An excerpt from the FCC webpage (http://www.fcc.gov/lpfm/):

Low Power FM Broadcast Radio Stations
This page contains information about the Low Power FM (LPFM) radio service, which was created by the Commission in January 2000. These stations are authorized for noncommercial educational broadcasting only (no commercial operation) and operate with an effective radiated power (ERP) of 100 watts (0.1 kilowatts) or less, with maximum facilities of 100 watts ERP at 30 meters (100 feet) antenna height above average terrain (HAAT). The approximate service range of a 100 watt LPFM station is 5.6 kilometers (3.5 miles radius). LPFM stations are not protected from interference that may be received from other classes of FM stations. A construction permit is required before a LPFM station can be constructed or operated.

END OF EXCERPT

I don't know if this is what you're posting about, above, but I suspect so.

Dear Reality,

You are so correct in your posting. Lurking I have been here for two years almost, and 80% of the traffic is Steve baiting Len, or Dave baiting Len, or Brian posted trite non-intelligence, Lloyd posting purely ignorant drivel, or Dave baiting Len, or Hans baiting Len, or Len acting confused, or other nonsense. Where is the radio policy?

To all of the above I think your proctologist called and your head is ready for insertion.

I did not know that! Thanks, Phil!

So it is quite possible that the FCC was indeed that forward looking - 50 years ago, almost to the day.

btw, the 1951 restructuring was due in part to petitions and proposals from two amateur groups. Neither was the ARRL. Anybody else know who they were? ;-)

>emergency.
>
>Are there established nationwide frequncies I can have this unit
>programmed for the presribed purpose?
>
>
>Thank you for your time.

If you want to contact Police/Fire/EMS in event of an emergency, from
anywhere in the US, use the following procedure:

1. Go to nearest telephone (cell, payphone, home phone, etc.)
2. Pick up receiver, place over which ear suits you
3. Dial "911"
4. When dispatcher answers, state the nature of your emergency.
5. Follow any instructions given.

There, that's all there is to it. There is no stinking "National
Police/Fire/EMS
emergency frequency" because if there was, it would be jammed 24/7 by
Radio Hero Wannabes like yourself. For the sake of the efficiency of our
existing emergency services, and for the particular inconvenience of the
Radio Hero Wannabes like yourself, I hope there will NEVER be any kind
of "national emergency frequency" directly linked to public emergency
service providers.

BTW -- to all you Ham Hero Wannabes out there -- you have a golden
opportunity to provide something like the Clydesdale is talking about simply
by setting up a nationwide monitoring network on .52 simplex -- and
exercising it on a regular basis. Just a thought...

Its just a matter of time and we will all be pirates. Keep on Jamming the airways OLD MAN. You have all ready got you hand slapped once for that kind of activity. One question what is the differance between a bulletin and a broadcast? Its been my experace is that a bulletin is on paper and it becomes a broadcast when it is put out over the air. What W1AW does is broadcast CW for the public to improve there morose code ablity. THAT IS A BROADCAST FOR THE PUBLIC!! Even by your definition of a broadcast. Right or wrong I call it the way I see it. I doesn't mean I like it but a spade is a spade. Just because something is right or wrong dosen't mean that I have to like it. Face the fact if K1MAN has to go so does W1AW. Don't get me wrong I think that W1AW needs to keep on broadcasting ARRL bullitens so new hams can get their code speed up to par. I also think that K1MAN needs to obtain a SW license and broadcast his stuff somewhere on the 41 meter band. We just don't have the room for his broadcasts in the genral portion of the phone bands. But right now as long as the FCC has not done anything to put K1MAN off the air you and anyone else jamming his broadcasts are breaking law. If I where you I would just pick my OLD (Yes your old becareful you might break a hip) ass up and move to another frequency to hold your QSOs there. I think that your not smart enough to see the simple way out. Like it or not those are the facts! You always get personal with people that don't agree with your old ways. I won't be long and we will all be pirates

It should take some effort to fire someone! We're talking
about livelihoods here. As long as there can be incompetent employees,
there can be incompetent bosses, or worse - vindictive ones. I've
worked for a few people in the dim dark past who based your worth as
an employee on your political party, the neighborhood you lived in,
and what side of the tracks you came from. If it were easy to fire
someone, many many people would be fired for some very trivial
reasons.

>Hey Steve, Lennie doesn't love you any more so why don't
>you stick your head back up your (explitive deleted) and shut up? We are all
>tired of your crap.

I should have noted it before, but once again someone comes to Lennie's "rescue" that is (1) anonymous and (2) profane (3) has nothing "positive" to offer to the exchange except the aforementioned profanities and insults.

What's with Lennie that he can't find one, single tenured Amateur Radio operator to have the guts to stand up with him in public and use their real name and skip the profanities? Of course there IS Brian, who doesn't have a clue about the regulations he comments on, and Mark Morgan, who is a documented pathological liar and functionally illiterate. And of course we can't forget "MegHz" and "W2DNE", neither of which have ever owned up to being anybody, ergo they are nobody.

The ironic thing is that two Anonymous Trolls show up at once which leads me to believe it's probably just Lennie under ficticious ID's anyway since he refuses to answer the question vis-a-vis his assertions. They also make it a point of suggesting what's "proper" for the NG, a favorite tactic of The Licenseless One.

Two more nobodys with nothing constructive to offer...Just insults.
Again, very Lenniesque.

Why am not surprised?

Steve, K4YZ

Should prove interesting. Commercial FM broadcasters really get their panties in a knot over unlicensed FM broadcast stations. This invariably brings down the FCC and a hefty fine (the FCC does enforce the broadcast bands as that is where the money is). I wonder if the county is thinking they can do this or if someone is running a scam and issuing 'county' licenses?

I'm more curious now. I just visited the Nashville and Davidson County website. Maybe the idiot paid for a 'business' license. You certainly may have a radio station and pay for a business license, but you'll need the FCC license to legally broadcast. Nothing on the website about a 'broadcasting' license.

Don't flatter yourself, Jim.

I called you a dangerous man, for the same reason that I consider Trent Lott
a dangerous man, based on your characterization of the nature of our
society.

Here is your quote:

"Any human activity has a class structure of some kind."

That statement, particularly because you chose to defend it, sets you aside
with a category of people who I consider to be in opposition of the "self
evident truths" such as "all men are created equal".

>evident truths" such as "all men are created equal".

Out of context, Hans, on two counts. Some class structures are good, some are bad.

Example of a good class structure: Dividing education into grade levels based on the developmental level of the students, so that the class matches the educational readiness of the students.

Example of a bad class structure: Arbitrarily dividing/categorizing people by race, ethnicity, gender, or other charateristics (code speed?) that have nothing to do with the situation at hand.

"All men are created equal" refers to the basic rights of humans, and was meant as a direct rebuttal to the concept of nobles and commoners having different rights under law due solely to who their papa was, and whether papa and mama were married.

Guess I should have bought a copy of "Welcome To The Monkey House" when I was in Borders' last night.

Your problem here, Hans, is that you do not understand human development
or the need for humankind to seek a support structure of it's own.

Even among ants there are different "classes" (castes, divisions, what
ever you care to use as a defining term), and there is the same in almost all
species of mammal. There is a leader, a "queen", followers, workers, soldiers,
foragers, etc.

Can you honestly say that there is NO "class structure" in human activity?
There is NO "society", even tribal, where these patterns do not manifest?
There are eople living in a truely chaotic, unorganized fashion?

The difference between us and the animals is that we can conciously
overcome some of this propensity to "classify" people by race/gender/age, etc,
and allow them the opportunity to rise or fall to rise or fall on thier own
merits or misdeeds.

There was nothing "dangerous" in Jim's comments. It was quite accurate.

No sarcasm intended, Larry. The KVG quote is simply better writing
than mine.

Kurt Vonnegut and I were "created equal", and we're both writers. But
there's no way in the world I'm in the same class as he in terms of
writing.

Right. I dunno if it can be called a "service" or a "sub-service" or
what but from what I've read the FCC intent for the authorization of
these stations involved, for one, to provide low-power broadcasts for
urban ethnic groups in their ghettos which the "majors" do not serve.
"Gettos" taken in it's historic connotation, a concentration of
immigrants with English as their second language. If at all. Dunno

about a county getting into the act, that sounds very fishy.

> It should take some effort to fire someone! We're talking about livelihoods
> here.

In the case of baggage inspectors, you're wrong: we're talking *lives*
here. But even in general, your statement is highly debatable: you are
suggesting that you, as an employer, are obligated to provide a living
to a person who cannot execute the work required of them. That is, you
are obligated to pay people for NOT working. Is this morally, let
alone legally, true?

Most people should be responsible for their own livelihood; if they
can't perform one job, they should go find another that they CAN
perform. As for those people who truly cannot in any way support
themselves, I believe in giving them charity--but why must it take the
form of putting them on the payroll and pretending that they are
performing a job that they aren't? I can think of much more
efficient--not to mention honest--ways of delivering charity.

> As long as there can be incompetent employees, there can be incompetent
> bosses, or worse - vindictive ones...

Sure--I've worked with such people too. But that doesn't really
provide a good argument that bosses should not be empowered to fire;
the incompetent and/or vindictive boss should simply be fired by HIS
boss. And if he's the owner, then the employees have many options:
find another job--which, if all employees agree, will drive him out of
business; strike, picket and otherwise engage in collective
bargaining; seek tort relief, if applicable; etc.

I don't think they're allowed to reassign those frequencies to anyone
else. They're strictly for use for community business. (garbage
trucks, landscapers, overflow spectrum for police, whatever)

And a darn good one to. If hams monitored .52 and made sure they had
or were near a phone to summon the proper authority VIA TELEPHONE,
the public safety workers would have a lot easier time in their jobs.

>
> 73 de Larry, K3LT
>

You can legally use any frequency to summon help during a emergency,
but you had better have a REAL good reason for using a police, fire,
or military frequency when you do or else say good bye to that ham
license for out of band transmissions. That is if the authorities will even
answer you on their frequency, most likely they won't! Around here the
dispatchers ask for your unit number when you call in. If you don't
provide one that they recognize as being a valid number they won't
do anything for you at all.

I had a bit of difficulty understanding all this incoherent blabber, but I must address some of the more readable areas.

A. His position on pirates is from one of experience. You see he was BUSTED by the FCC for being a pirate broadcaster. This by his own admission.

B. His claim of my jamming is interesting, and a total fabrication. I'll just add this ...it is a FELONY to LIE to a FEDERAL OFFICIAL. 'MARK MY WORDS'.

He know what I mean.

C. I have already defined 'Broadcasting' . No one else has a problem with it. Why is that Orfis does? Remember he is suffering from brain damage.

D. If you don't care for me getting personal. Then stay the hell out of my way.

E. As for 'breaking a hip'.. Could be Orfis...but it wont be mine.

Your punt fool.

Dan/W4NTI

"Oris" <orisnospam@dirtball.com> wrote in message news:3DFE935D.2040209@dirtball.com...
Its just a matter of time and we will all be pirates. Keep on Jamming the airways OLD MAN. You have all ready got you hand slapped once for that kind of activity. One question what is the differance between a bulletin and a broadcast? Its been my experace is that a bulletin is on paper and it becomes a broadcast when it is put out over the air. What W1AW does is broadcast CW for the public to improve there morose code ablity. THAT IS A BROADCAST FOR THE PUBLIC!! Even by your definition of a broadcast. Right or wrong I call it the way I see it. I doesn't mean I like it but a spade is a spade. Just because something is right or wrong dosen't mean that I have to like it. Face the fact if K1MAN has to go so does W1AW. Don't get me wrong I think that W1AW needs to keep on broadcasting ARRL bullitens so new hams can get their code speed up to par. I also think that K1MAN needs to obtain a SW license and broadcast his stuff somewhere on the 41 meter band. We just don't have the room for his broadcasts in the genral portion of the phone bands. But right now as long as the FCC has not done anything to put K1MAN off the air you and anyone else jamming his broadcasts are breaking law. If I where you I would just pick my OLD (Yes your old becareful you might break a hip) ass up and move to another frequency to hold your QSOs there. I think that your not smart enough to see the simple way out. Like it or not those are the facts! You always get personal with people that don't agree with your old ways. I won't be long and we will all be pirates MARK MY WORDS!

What special status? If you mean that because the ARRL has, over
some 70+ years, cultivated a relationship and respect from the FCC
because of the ARRL's being a positive and supportive organization, then
I see nothing for anyone to complain about. The ability to start an
organization,
gain members, cultivate a relationship with the FCC has always been
an option for anyone or any group...and some have indeed done so.

> There are many of us who think that is just plain wrong.

You would propose what to make it right then?

> Let the ARRL register as a lobbying orginization,

I would ask why...if the ARRL isn't violating any "lobbying" laws now,
should ARRL have to register any more than myself or other
organizations?

> And there are 556,000 hams who *aren't* ARRL members.

Your point? Odds are most of the 556K of non-ARRL hams
are just not interested enough to join and probably
wouldn't join any "alternative" type of ARRL organization
if you started one.

> And I've listened to K1MAN too. So what does that have to do with
> equal treatment under the law?

The ham bands are NOT for broadcast of just any political garbage
and clearly ARRL does not transmit any. What the ARRL transmits is
100% ham information for those that might need it. The distinction
is pretty clear to most people...but apparently not all.

Cheers,
Bill K2UNK

> I don't remember that a Restricted 'Phone ever needed any
> test. It was a Permit, not a license, yes? Or is that going
> to evolve into some Roaring Rant of a new sub-thread?

No test for the RP, and it is issued only because (mostly international) the law requires same. A number of years ago, the Commish' dropped the RP requirement for operators of VHF marine equipment on pleasure boats on domestic waters and operators of VHF aircraft radios in domestic airspace.

To short-circuit the "rant" on a "license" versus a "permit", the ITU Radio Regulations and various other treaties which require radio for safety purposes refer to three classes of "commercial" radiotelegraph operator certificates (which will not be discussed here) and two classes of "commercial" radiotelephone operator certificates:

Radiotelephone Operator's Restricted Certificate - requiring practical knowledge of radiotelephone operating procedure, ability to send and receive messages correctly by telephone (i.e. spoken words) and general knowledge of the Regulations applicable to radiotelephone communication, especially safety communications.

Radiotelephone Operator's General Certificate - requiring the above plus knowledge of the elementary principles of radiotelephony, detailed knowledge of practical operation and adjustment of radiotelephone "apparatus" (sic), and detailed knowledge of the applicable Regulations.

Note that the Radio Regs do not make a distinction between "license" and "permit" or about detailed examination versus applicant's statement of qualification. That is left up to each Administration.

In the U.S., there are NINE different "commercial" operator certificates at present. See Section 13.7(b) of the FCC Rules for the gory details.

The FCC decided to call the Restricted Certificate a "Permit" - both the Restricted Radiotelephone Operator Permit issued by declaration of qualification and need, and the Marine Operator Permit issued by examination. The exception to this is the GMDSS Operator License, which is a Radiotelephone Operator Restricted Certificate for international purposes. In later years, a

"Broadcast Endorsement" was added to what was then the Radiotelephone Third Class Operator Permit, allowing operation (but not adjustment or maintenance) of certain classes of AM and FM broadcast stations.

Historically, the FCC decided to make two classes of Radiotelephone Operator's General Certificate - the Radiotelephone Second Class Operator License, which was oriented to land mobile, marine, and aviation station operation and maintenance, and the Radiotelephone First Class Operator License, which allowed operation, adjustment and maintenance of all classes of radio stations not employing manual Morse code (with the exception of stations in the amateur radio services, of course). These "Licenses" carried the legend "Generral Radiotelephone Certificate" under the name of the license.

On the 1980s, the Commission declared that with the advent of more stable and reliable transmitters (and for other political reasons), a radio operator license or permit was no longer required for the operator of a domestic broadcast station, placing the obligation for ensuring rule compliance squarely on the shoulders (or as some people said at the time, another part of the anatomy) of the station licensee.

At that time, the distinction between the two classes of Radiotelephone Operator Licenses was abolished, and the resultant "uni-class" license was named (after some agonizing) the General Radiotelephone Operator License. Several years after that, the certificate was replaced by a wallet-card.

>> The Commission added two other licenses for
>> the required Global Marine Distress and Safety System radio
>> equipment (a digital data and SSB voice system replacing the old
>> MF/CW 500 kHz distress system with its venerable _SOS_) on ocean-
>> going vessels - the GMDSS Operator Permit, counterpart of the Marine
>> Radio Operator Permit, and the GMDSS Maintainer License, counterpart
>> of the GROL.
>
> Thank you again, Phil, but didn't you leave out the orbital
> characteristics on the Inmarsat for GMDSS? :-)

In practice iNMARSAT is used as an integral part of the GMDSS because the otherwise horrific charges for a call are waived for genuine distress traffic, but the 2 MHz and HF SSB and SITOR GMDSS sub-systems can be used instead of INMARSAT, as not all ships in the system are required to have INMARSAT capability.

Don't forget NAVTEX, a SITOR/FEC bulletin system on 518 kHz. I'm one of those nuts who keeps a receiver and TNC on NAVTEX 24/7 and gets solid copy from the Astoria, OR station (100+ miles away) as well as spotty copy from Northern California (Pt.Reyes), Southern California (Cambria), Western Canada. and Alaska (Anchorage). Now

if I had a 300 foot broadcast tower to tie my receiver onto.....

> Note word "permit." Is that newly defined as a "license" which
> requires a TEST? :-)

The real distinction between a "license" and a "permit" is that the
latter does not permit the holder to make adjustments and repairs
of the transmitter, exclusive of operator-enabled design functions
such as preset channel changing.

In FCC practice the "license" and "permit" have no other
distinction. All licenses and permits require exams with the
exception of the Restricted Radiotelephone Operator Permit.

>>> Keeping a certificate in a safety deposit box is VIRTUALLY
>>> the same as RETIRING it.
>>
>> No different from hanging it on the office wall.....
>
> In general, true. Wouldn't you say that wall hanging attracts the
> eye more than a building housing safety deposit boxes?

If the building housing safety deposit boxes is a bank, that
sounds pretty attractive to me. As Willie Sutton, a noted bank
robber of a half century ago said when asked why he robs banks:
"Because that's where the money is".

> In the case of professions of law and medicine, those [certificates]
> are there to inspire confidence that clients can be separated from
> money painlessly, yes?

That didn't make much of a difference to several deadbeat former
clients. I learned the hard way that I had to do business "on the
CUFF" - Cash Up Front First.
>
> There's some gorgeous certificate making programs available
> in larger software stores. Anyone can have a neato certificate
> in their choice of fancy frame.

That describes my membership certificate in the Order of the Iron
Test Pattern. That and $1.10 plus tax will get one a "dollar
meal" at a fast food emporium of choice. <Burp...>

Someone (I don't know who) said:
>Steve, you've said many things, but you never answered the question.
>
>"What is this fellow's obsession with this Lenny?"

Then K4YZ said:
>> Know >>!<< know...Come out come out where ever you are, LENNIE!
>>
>> Sheeesh. What a PUTZ.

There are "enemies" among us. K4YZ is the defender of Ham Radio and all good things.

However, he takes words out of context and then "demands" an answer. Or, he will accuse the person of lying.He feels he has to attack those that disagree. His style is to call those that disagree a "PUTZ" or "creep". Two words that are not in the dictionary. He often, without foundation4, accuses those he disagrees with, with a lack of knowledge of the subject. This after the person has presented alot of supporting arguments.

K4YZ has appointed himself the defender of the noble cause of Ham Radio.

Those liscenses are pefectly legal:

Dear Mr. Hunt:

I notice that you personally introduce your agency as being charged with regulating interstate and international communications consisting of almost all electronic methods. This leads me to ask you, does your agency, the Federal Communications Commission, have any jurisdiction over intrastate radio communications, meaning "within the state"?

If you do have jurisdiction, where may I find the implementing regulation in the Federal Register, and specifically, what section and paragraphs would pertain to radio transmissions that do not cross state borders?

Thank you very much in advance for your answer to me.

The answer was as follows:

March 3, 1997

I've been asked to respond to your letter regarding intrastate radio communications, meaning "within the state." The FCC only regulates interstate and foreign commerce in radio communications. For your reference, I have enclosed a copy of Title 1, Section 2, 47 United States Code 152. Also enclosed are copies of other sections and titles referred to in Title 1. Respectively, they are Sections 223 through 227, Section 332, Section 301 Title 6, and Sections 201 through 205 of the Communications Act of 1934 as amended.

Intrastate, meaning "within the state," radio communications may be regulated by individual states, and I would recommend contacting your state utility commission for further information.

Signed,

Martha E. Conti

Chief, Public Service Division

Office of Public Affairs

>However, he takes words out of context and then "demands" an answer.

No, Vipul...The questions are in direct response to specific assertions. Those assertions are made by persons (and specifically Lennie Anderson) who have no practical experience in Amateur Radio, yet a made with the air of superiority OVER Aamteur Radio.

Lennie the Liar specifically stated that Amateur Radio licenses do not grant the same access to other modes and frequencies that the "rest of the radio world" grants.

I have asked him to state WHICH radio license grants the degree of access to the ether that Amateur Radio licenses grant. He has yet to answer that question. He cannot. There is NO other radio service that allows one to eperienc as much as radio has to offer as Amateur Radio.

Just like I specifically asked YOU to please tell us why Amateur Radio is any different from any other sport, hobby or pasttime in regards to it's own "jargon". YOU have ignored that request. The reason for that is that you can NOT answer it without looking foolish. Your assertions were silly and poorly concieved in the first place and it took little effort on my part to show you why.

>Or, he will accuse the person of lying.

Vipul, I disagree with a LOT of people in this forum, however the one's who get labled a "liar" are the one's caught doing it.

>His style is to call those that disagree a "PUTZ" or "creep".

Only when you act like a putz or a creep, or hide behind anonymous screen names. YOU seem to beleive that is't perfectly OK to slur and denigrate people, both specifically and in general, and then NOT be called on it.

>Two words that are not in the dictionary.

It's STUPID assertions like this that get you labled AS stupid, Vipul. Since when are "creep" and putz" NOT in the Webster's dictionary? (Webster's, by the way, is the standard used in most US primary, secondary and collegiate educational systems, Vipul)

>He often, without foundation, accuses those he
>disagrees with, with a lack of knowledge of the subject. This after the

>person
>has presented alot of supporting arguments.

For months we tried to get you to tell us what your "circumstances" were, and from what background in Amateur Radio you came. You refused, yet continued to make assertions and proclaimations that were themselves unfounded and without merit.

You have provided NO "supporting arguments". You have only supplied your OPINION as to why you think Amateur Radio is boring and itself without merit. You speak so as to make it appear to the uninformed that ALL of Amateur Radio is such when such is NOT the truth.

>K4YZ has appointed himself the defender of the noble cause of Ham Radio.

Against such as yourself and Lennie the Loser...?!?! You bet! It doesn't take much!

>"What is this fellow's obsession with this Lenny?"

My "obsession", Braniac, is that I do not tolerate liars, bullies and fools, all three of which seem to be summed up in the personna of Leonard H Anderson. lennie seems to think it's OK to "attack" me, ergo he's found an opponent who will not allow his ranting to go unchallenged.

Lennie seems to be determiend to undermine the very same Amateur Radio in which you are licensed by making slurs, denigrations and outright mistruths in order to make it appear as though it is less than what it is. Lennie would have the uninformed think Amateur Radio is nothing more than CB with a code test.

Lennie portrays the average Ham (read that YOU) as a mindless tot playing with a toy he has no practical knowledge of. Indeed, his suggestion that an arbitrary age limit be placed on an Amateur license was a manifestation of that misconception.

Lennie makes it claer that he and ONLY he truly represent that which OUGHT to be allowed to "operate" a radio. He is unable to differeniate between "commercial" radio and "Amateur" radio, it's purposes, history or applications.

Unfortunately Lennie has a very visable soap box from which to mount his crusade, and to the uninformed, if allowed to go unchallenged, Lennie's rants would appear to be valid.

Did that answer the question to YOUR satisfaction, Brian?

Now...where are your T5 logs?

Steve, K4YZ

>
> Ain't that the truth. BTW 155.475 MHz is a "nation wide"
> emergency frequency for POLICE USE ONLY.

155.865 is Michigans state-wide law enforcement freq, as well as 154.295
being the statewide fire frequency.

>
> > For the sake of the efficiency of our
> > existing emergency services, and for the particular inconvenience of the
> > Radio Hero Wannabes like yourself, I hope there will NEVER be any kind
> > of "national emergency frequency" directly linked to public emergency
> > service providers.
>
> Agree 110%

Same here..... as being in the form of an emergency services myself, I would
definitely not want to see that either. Now a monitoring network would
sound like a great idea in concept.

>
> You can legally use any frequency to summon help during a emergency,
> but you had better have a REAL good reason for using a police, fire,
> or military frequency when you do or else say good bye to that ham

> dispatchers ask for your unit number when you call in. If you don't
> provide one that they recognize as being a valid number they won't
> do anything for you at all.

Basically the law is written to the effect that a person must have exhausted
all other options such as CB, GMRS, FRS, MURS, Cellphones, Smoke Signals,
Drumbeating or any other method of attracting attention to the emergency
situation, and be able to prove that was the only option left. There is no
law that says you cannot own a transciever capable of transmitting on any
frequency. What is against the law is transmitting on unauthorized
frequencies.

I will say however, you will definitely be "run through the mill" of
questions/interrogation if you were to transmit on the emergency (as well as
others) services frequencies. Best solution I have is to keep a couple of
different communications options with you in your vehicle. Even a cellphone
with no normal service, still is good for 911 in most areas. I had a
situation where I came across a vehicle that the driver was drunk as hell,
and was swerving from both sides of the roadway (2 lane 1 lane in each

direction) and running people off of the road. Unfortunately I could not raise anyone on either a 2m or 70cm repeater in that area (16 of them within reach) nor any simplex freq. in those bands, and had to resort to the cellphone. Had I had my fire dept. HT, I may have been able to get some help there.

I think you might overstate your knowledge of radio, which has
prompted the remarks. I have no illusions about the amateur radio
license, or my abilities as an electronics genius. I take no offense
if I don't think his remarks apply to me.

> Lennie makes it claer that he and ONLY he truly represent that which OUGHT

>Unchallenged, or over the deep end? Can you tell the difference?

Can you? Can you tell the difference between your opinion and a hole in
the ground? Can you see the tears of concern in my eye?

>I don't believe that, and I don't see where Len has said that.

Then you need glasses and a good proctologist.

>I think you might overstate your knowledge of radio, which has
>prompted the remarks. I have no illusions about the amateur radio
>license, or my abilities as an electronics genius. I take no offense
>if I don't think his remarks apply to me.

Where did I STATE my knowledge of radio? My remarks have been over the
general basis and purpose of Amateur Radio. I have stated, in very clear,
unmistakeable English that I defer to Lennie's apparent knowledge of
electronics (more likely his ability to paste-and-cut)

And if you take no offense, then perhaps your head is a bit too deep in
the sand.

>> Lennie makes it claer that he and ONLY he truly represent that which
>OUGHT
>> to be allowed to "operate" a radio. He is unable to differeniate between
>> "commercial" radio and "Amateur" radio, it's purposes, history or
>applications.
>
>CW, cw, and more cw?

If you think that that's all it is about, then you DO have your head a bit
too deep and have NOT been paying attention.

Lennie thinks that's all it's about, but that's only because that's all he
wants to THINK it's about. Lennie's a fool, though.

>So ignore him. But since you are obsessed, you cannot.

History has repetitively shown what happens when you let braggards, liars
and thugs go unchallenged.

>Was anything revealed to you as you answered the question? Did a
>little grain of wheat light turn on above your head?

For what? That you disagree with my dogged challenging of someone who insists on insulting me and a whole subset of American society?

>> Now...where are your T5 logs?
>
>In storage.
>
>But I can assure you that you are not in my T5 logs

I know I am not. You were never an item in DX circles. You were never "legal" as a T5 station, and I doubt there are any T5 logs from you.

Steve

>organizations?

The ARRL *does* have registered lobbyists. I was in the library reference section one day and came across a thick book entitled something like "Registered Lobbyists to the U.S. Government." Out of curiosity, I looked up "American Radio Relay League" and found, sure enough, that it had several lobbyists registered, including Paul Rinaldo, W4RI.

Now, I don't think that's a bad thing. It's a good thing that we have lobbyists for our interests in Washington, and all the better that we be up front about it, especially if such registration is required by law. But it's a lot of semantic hair-splitting, to no good end, about whether the ARRL does any "lobbying" or not..

Dear Friends,

It becomes my painful duty to write you a letter of apology instead of sending you the holiday remembrance that I had intended for you.

Knowing so well the appetites, likes and dislikes of my close friends, I made up a list of twelve of my best friends and went down and bought several quarts of "Royal Canadian" 18-year-old whiskey. Nothing but the very finest for my friends. I took this home and put it in my cellar and intended to put it up in nice Holiday wrappings and send it out to you just before the New Year.

My wife got to fumbling around in the cellar and found the liquor and didn't understand just what I intended to do with it. So she came up and told me to empty the contents of every bottle down the sink, or else. So I proceeded with the unpleasant task.

I withdrew the cork from the first bottle and poured the contents down the sink, with the exception of one glass which I drank. I extracted the cork of the second bottle and likewise poured the contents down the sink, with the exception of the glass which I drank. I pulled the sink from the next bottle from the cork of the next and drank one sink out of it and threw the rest down the glass. I pulled the sink out of the next glass and poured the cork from the bottle. Then I corked the sink with the glass, bottled the drink and drank the pour.

When I had everything emptied, I steadied the house with one hand and counted the bottles, corks, glasses, and sinks with the other, which were twenty-nine. And, as the houses came by, I counted them again and finally had all the houses and bottles and corks and glasses and sinks counted, except one house which I drank.

So this accounts, dear friend, for your not receiving a more stimulating present than this letter.

73, de Hans, K0HB

> Go out and find a book called "The Peters Principle" by a Doctor Peters
> (Imagine that!!). It came out several years ago.
>
> It will explain it all to you both.

I've read it (I think you meant Peter Principle) It seems to me that to argue that a Supervisor doesn't need to actually justify their reasons for firing someone, as Len Budney seems to advocate, really leaves a wide open field.

There are people out there who have very "exacting" standards. How would you like to get a new supervisor who decides to fire you on account of your ethnicity, or religion? Or your hair color, or just how attractive you are, or whether or not you know Morse code. Maybe you've been there for a long time. Maybe the new supervisor just doesn't like you. Those should be grounds for your termination?

All I'm saying is that if you document it, document it correctly, and present it properly, the system will work. I've used it, my wife used it in a harrassment case, and it just works. you have to have some rules and guidelines.

If the person deserves it, sure - fire their backside. But remember, all the lazy, incompetent, self centered and sometimes just plain evil people are more than just underlings.

>How about because he didn't understand English?

More Japanese in Japan understand English than some Americans understand English in America.

>Is there a "Robeson Rule"
>now that all must understand English and ICAO ebonics or else stay off ham
>radio?

Did I say there was? can you proide a cite where I suggested there is? I pointed out that English IS the international communications language. This is a fact. The ICAO alphabet is the internationally accepted phonetic alphabet that has been agreed upon by signatoris of the ITU. This is also a fact.

Are YOU having a problem with facts today, Hans? Speaking of "Lennie-esque" behaviour. You're trolling a bit too shallow today.

>Talk about Lennie-esque arrogance! Are you SURE you're not related?

Dead sure. Are you related to Liberace? Because I know what YOU are qualified for, Hans!

Well heck, that's the answer then! And at least one county
(Davidson County TN) has taken advantage of the authority to
issue radio licenses and make some revenue in the process.

It'll never fly. The answerer was just another bureaucrat who really didn't know what it was they were putting out.
Federal courts long ago ruled that since radio has the capacity to cross state lines with no regard for jurisdictions it will be regulated on the Federal level. A single letter from any functionary won't change that.
Somewhere along the way someone heavy from DC will get wind of it all and will grab them and straghten them out.

But you know, Dick, it's absolutely true that 47 USC 152 says that the FCC has no jurisdiction over intrastate radio transmissions. Notwithstanding any court decisions, if your transmissions do not cross state lines, then the FCC can't regulate you. Of course, this is a problem of proof, but the burden is on the FCC to prove their jurisdiction, not the other way around. Telephones are instruments of interstate commerce, even if you only call across town, but telephones are all interconnected, worldwide. Radios aren't. Looks like a little recreational legal research project comin' up.

Indeed.

Furthermore, has anyone besides me actually read the last two letters sent by the FCC to Glenn Baxter, K1MAN? I ask, because most of the posters in this thread seem to be oblivious to the information contained in them. You can find them at the ARRL web site:

http://www.arrl.org/news/stories/1999/07/02/1/
http://www.arrl.org/news/enforcement_logs/2002/0209.html

The only issue that's confusing for me is why the FCC is taking so bloody long to take care of the matter. Perhaps Mr. Hollingsworth, like Bush and Iraq, is making sure that the FCC dots every "i" and crosses every "t" to make sure that whatever hammer falls on K1MAN will find its mark and stay there.

Individuals who continue to blather on about "K1MAN is doing the same as W1AW" are assigned the FCC letters above as remedial reading. You won't find the FCC writing to the ARRL with such a detailed listing of multiple violations of FCC rules, including illegal broadcasting, absence of a control operator, interference, broadcasting recordings of telephone conversations, and threats. You won't find ARRL officials responding to the FCC with such pathetic, almost comical, baiting of authority that Mr. Baxter has been engaging in over the past few years.

As you state...notwithstanding the courts...the FCC has long ago been
acknowledged/granted exclusive jurisdiction for both inter and intra-state
radio transmissions (i.e. federal preemption being the applicable phrase
I believe.

If such was not the case, then the only time part 15
might apply would be for those cases that were very close to a state line
and
might, therefore, be interstate in nature. Can you imagine the mess that
we'd
have with things like locally generated interference, etc.

> Of course, this is a problem of proof,

Which is exactly why the FCC has the full jurisdiction in radio matters.

> but the
> burden is on the FCC to prove their jurisdiction, not the other way

So how do you propose to prevent any radio wave from crossing state lines?
Even UHF/SHF will do it. There is nothing magic in a state line, they're only
visible when deliberately marked by some human.

It's a smoke screen. Nothing has changed. If it has, then GMRS away from a
state line doesn't require a license, as does not a UHF TV broadcast station in
the center of a state. But occasional propagation vagaries make it just possible
for even that RF to cross state lines, thus the court ruling. NOTHING has
changed, but I imagine Phil Kane might be in better position to comment.

Thanks for the links. I read them in real time when they were first
published but their content had faded in my memory. It was fun to
review them.

>The only issue that's confusing for me is why the FCC is taking so

I suspect that with license renewal in October of 2005, he will be
designated for a hearing and the voluminous evidence will be heaped
upon him with the burden of proving he's worthy falling on him.

You're right about the idiots. Listen to any of the ARRL sessions
(they'll have to listen to the phone transmissions, because I doubt a
one of them can copy CW), and it is clear that it is an amateur radio
bulletin or code practice. There's no nonsense like call-ins, breaks
for "commercials," editorials, or anything other than either news or
(in the case of code practice) technical information.

Listen to a Baxter broadcast. It's formatted like a broadcast, it's
paced like a broadcast, it sounds like a broadcast. It fails the duck
test; it's a broadcast, and it's illegal.

Moreover, ARRL has been providing their services for 75 years or more,
and there is every reasonable expectation that they will continue to
provide them for the distantly forseeable future.

Baxter is 60, and barring his hoped for removal, will likely only have
the energy to carry this charade on for, at most, 15 years. That
should put the lie to any judgement of "value" he is providing to
Amateur Radio. He's not here for the long run. Just a short burst of
easily forgotten self-aggrandizement.

Oh, and someone said he was a lawyer ("and a fine one"); check his
bio, he's an engineer. Not a single mention of law anywhere. I've yet
to meet a lawyer who doesn't manage to bring it up somewhere in a

conversation.

But that's the point, Bill -- jurisdiction is granted by 47 USC 152, that's the jurisdiction statute. And the statute says very specifically that there is no jurisdiction over intrastate radio communications. Here is the pertinent section:

(b)

Except as provided in sections 223 through 227 of this title, inclusive, and section 332 of this title, and subject to the provisions of section 301 of this title and subchapter V-A of this chapter, nothing in this chapter shall be construed to apply or to give the Commission jurisdiction with respect to

(1)

charges, classifications, practices, services, facilities, or regulations for or in connection with intrastate communication service by wire or radio of any carrier,

Federal courts cannot override statutes with their decisions, unless they find them unconstitutional. I think this is interesting.

I don't propose to do anything. I'm not taking any position on this -- I just think it's interesting that the statute that grants the FCC its jurisdiction over radio specifically excludes intrastate communications, particularly when, as you state, almost any radio transmission can be interstate.

You can't call federal legislation a smoke screen. Like Richard Pryor said about cancer, you can't laugh that shit off. I'll be interested to see how the court decisions have handled this.

So how come the FCC doesn't "operate" on the principal you site below?

Additionally, why isn't there any "radio regulations" on an "intra-state"
basis in each of the 50 states?

Methinks there's a misreading or misapplication of 47 USC 152
in your analysis.

Cheers,
Bill K2UNK

On second thought...
Here's your analysis failure....
There is NO presumption that any radio service can be truly
intrastate only in nature. The courts long ago recognized the interstate
(as well as inter-country) nature of all radio propogation
regardless of specific content or intended limitation to intra-state

only communications. We have long ago seen that nothing
can guarantee limiting propogation of a radio signal to
only an intra-state geographic boundary 100% of the time.

Indeed, folks have done amazing distances with
verrryyy low power at all sorts of different frequencies.

Soooo... without an actual case to the contrary, the court record of
radio regulation clearly is on the side of FCC jurisdiction of all
radio station transmissions within the USA.

Cheers,
Bill K2UNK

That's exactly why there is no conflict and there is no
state level regulation of radio. See prior posting on this
point. Dick has it 100% right as to all radio being interstate
in nature at some point...and since the originator can't control
or limit the interstate nature of any RF signal, the issue
is always under FCC regulation.

The courts have not, to my knowledge, ever sided with your
viewpoint that radio can ever truly be 100% intrastate only
100% of the time.

Works for me.

The people who represent the govrnment like to use interstate commerce and crossing state line synonymously. Commerce and crossing state lines are two distinict things.

Article I, Section 8 states:

"The Congress shall have Power.....

To regulate Commerce with foreign Nations, and among the several States, and with the Indian Tribes; "

> It's a smoke screen. Nothing has changed. If it has, then GMRS away from a

However I am sure that if the transmission affects another transmitter engaging in interstate commerce then they could do something about it.

It's a good thing that automobiles cannot cross state lines as the
states would have to give up licensing authority to the Feds.

Is this public trough feeding bureaucratic bimbo brain damaged!!? Anyone with even a smattering of understanding in the area of federal pre-emption and communication law knows that this nonsense is laughably wrong! Someone get hold of these clowns and remind them that issues of this type was effectively settled over at Appomatox Courthouse in Virginia about 137 years ago. I'm sure they must have heard of it - it was in ALL the papers.

I have a feeling the original poster was just under an assumption that there
was no licensing for LPFMs.

You're welcome to back that claim up with a google search, if you know
how.

It shouldn't take an engineering degree to accomplish, but since
you've got one, why waste it?

The keyword is "commerce." Private vehicles don't pay to travel outside either home state; commercial vehicles have a complicated set of apportionment rules that allow them to engage in interstate commerce. Ma and Pa on vacation are not part of the commercial aspects that are in play.

>
>And a darn good one to. If hams monitored .52 and made sure they had
>or were near a phone to summon the proper authority VIA TELEPHONE,
>the public safety workers would have a lot easier time in their jobs.

Well, I've posted the same idea many times before on Packet BBS's,
Fidonet, and here. I've also seen similar ideas in the Letters to the Editor
of all the ham magazines from time to time. Problem is, as simple and
obvious an idea as it is, it would take a modicum of initiative and
motivation to implement it on a local level, such as a club project; and
then to take it to a regional level, state level, and ultimately national
level. At least all the major ham population areas should be reasonably
well covered -- but they aren't -- not even close! At the most basic
level, we really don't have anything like a readily accessible ham-radio
emergency communications system!

>You can legally use any frequency to summon help during a emergency,
>but you had better have a REAL good reason for using a police, fire,
>or military frequency when you do or else say good bye to that ham
>license for out of band transmissions.

There are a few infamous incidents where this has been done, and the hams involved received a first-class proctological examination as a result, but were provisionally cleared with the understanding that this was not to ever happen to them again in their lifetimes. One incident California was somewhat controversial because there was an appearance that the ham involved actually caused a personal injury accident for the express purpose of allowing him to be the one to "call it in" to the authorities on his HT.

Personally, I can't imagine any situation where this would ever be necessary, and I believe the very fact that a ham was prepared to transmit out-of-band on a public-service frequency implies that he was "looking" for an opportunity to be a Ham Hero™.

>That is if the authorities will even
>answer you on their frequency, most likely they won't! Around here the
>dispatchers ask for your unit number when you call in. If you don't
>provide one that they recognize as being a valid number they won't
>do anything for you at all.

I believe that's a good policy. You seem to have a good head on your shoulders, Bill. We'll have to get together for a game of "horseshoes" some time!

Baxter a lawyer? Now, that's a good one! Prove it. Where did he go to
school?
This claim can be verified by searching for attorneys in Baxter's home
state...by law
attorneys are registered, unless they have been disbarred.

Let me state unequivocally that I am not in any way in opposition to the "self evident truths" such as "all men are created equal".

"Created equal" does not mean that all are equal in every way for their entire existence. It means that they are "endowed by their Creator with certain inalienable rights".

It means that no individual gets special rights or lack of rights under the law, based on the accident of birth. Unfortunately, it took almost a century for that
idea to apply (in theory) to nonwhites and almost a century and a half for it to apply (in theory) to women.
>

> There is NO "society", even tribal, where these patterns do not manifest?

Perhaps my statement would have been clearer if it read:

"Almost all human activities have a class structure of some kind."

>There are people living in a truely chaotic, unorganized fashion?

Oh yes! All over the place!

> The difference between us and the animals is that we can conciously
>overcome some of this propensity to "classify" people by race/gender/age,
>etc,
>and allow them the opportunity to rise or fall to rise or fall on thier own
>merits or misdeeds.

Actually, I'd say it was the other way around! Animals of the same species
usually build their "class structures" around things that are functional,
rather than arbitrary. Humans are the ones who make all sort of bad class
distinctions based on arbitrary and irrelevant characteristics.

Pirate radio enthusiasts have been closely watching the goings
on in Tennessee for some time now. The county radio licenses
are quite legal and the federal bureaucrats would do well to keep
their obnoxious collective noses out of local affairs, lest they have
their noses clipped off and handed to them. Then again, look at
K1MAN. The FCC is leaving him alone, with good reason.
If the commission bothers Baxter anymore, he will slap the FCC
from one end of the federal court system to the other, and
Hollingsworth will be lucky to leave the commission with his
pension still intact.

Wrong... No such "your own little (radio) station...can exist on a purely
intrastate basis 100% of the time. The nature of RF propogation
can't be limited to only intra-state 100% of the time.

There is some room for abuse. I didn't advocate the idea that a supervisor can fire anyone for any reason without ever being questioned.

> There are people out there who have very "exacting" standards. How
> would you like to get a new supervisor who decides to fire you on
> account of your ethnicity, or religion?

Those things do happen. Note that the problem does have a self-correcting quality (in the longer run, not the very short run). For example, if a supervisor is bigotted but his boss is not, then his boss will fire him. Eliminating the bigot is hampered if the bar to dismissal is raised too high, just as eliminating incompetent employees is hampered.

On the other hand, if the bigotry runs all the way to the top, then in the long run the company will not survive. For example, a restaurant which turns away minorities is turning away money, and is dooming itself in the long run. Nobody will want to eat there unless he is comfortable being recognized as a bigot by everyone who sees him enter, etc.

Finally, there are options for more direct action: don't forget that I mentioned picketting, collective bargaining, walkouts and lawsuits as possible remedies.

So your question, while valid, is not necessarily THE question. There are answers to the bigotted supervisor OTHER than requiring a papal dispensation before anyone can be fired. The question is, do the benefits from freedom to hire and fire outway the costs from arbitrary firings, given the remedies that exist? One can cogently argue that the answer is yes.

By contrast, the cost of firing under the present system can be extremely high. I've known supervisors who wouldn't DARE to reprimand--let alone fire--any minority employees under them, for fear of lawsuits. I've also seen supervisors administer the reprimands, and get a lawsuit for their troubles. This is one of the downsides of affirmative action, the ADA, etc. Is it, on balance, worth it? One can

argue yes--but usually people seem to assume that there is no way to address bigotry and prejudice other than legal force, and I don't think it's fair to assume that without question.

> Maybe the new supervisor just doesn't like you. Those should be grounds for
> your termination?

Put the shoe on the other foot. If a total obnoxious donkey is working for you, how would you feel knowing he was basically unfirable? Remember, from his perspective, you "just don't like him". If I hate my boss, I'll quit (and I've done so before). If he hates me, I recognize in principle his right to get rid of me (though I'd of course be quite ticked if it happened to me). Freedom of association is meaningless without freedom of non-association.

With Phil floating around here it's gonna be a very short project.
Methinks the Feds prempted jurisdiction in all matters radio with the
Communications Act of 1934. At least to the extent that no civilian or
civilian entity can put a legal 100w transmitter of any type in any
service without an FCC license. Anywhere. Maybe not counting the old
lowfer induction radiophones used by the railroads back when.

More from the peanut gallery? FCC hasn't busted Baxter because he's another nutcase and when he goes dpown it'll probably have to be the hard way. So far he just isn't worth the trouble. The evidence is still a-building, and when the time comes the evidence will be complete. It WILL come.
And the Tennessee "license" situation will be resolved as well. Such actions aren't taken until ALL the background work is done, evidence collected and everything is in place. That's all the result of lessons learned from the past.

I'm not sure but it may have began with the original Radio Act of 1912. Much modified and updated with tje Act amd the
formation of the Commission in '34.

Yep, even the unlicensed low power radiators and services are "authorized" by FCC action.

I would take the FCC on over this...

Low power transmission can be calculated to be below X microvolts at X
distance,
the amount of energy past the point of being equal to interference from the
local oscillators in
domestic equipment.

Let them argue about tropo ducting, sporadic E and all the rest of their
arsenal of propaganda.

Current licenced stations transmit further than their service area anyway
and that can cause interference to other
paid up broadcasters.

I think that if the jusisdiction issue was raised with states and counties
and that they were made aware of licence income
then you may have a winner.

You lot need to group together and push this as an interest group, go take
the battle to the FCC..

Get a smart lawyer.....

Peter

My guess is that the county has a license, and they are issuing a
piece of paper or a card, being called a "license," to those that they
have authorized to use the frequency.

Tell that to Mickey Mouse and the State of Florida. Bed tax is used
for revenue instead of state income tax.

Dick was there. He broke the news using a knee key hooked up to the
telegraph wires. Wasn't no "wireless" in those days.

The dominant liberal media intentionally ignored the story of
Hillsdale College's battle with federal bureaucrats in Michigan.
For 20 years, Hillsdale College battled the federal department
of education for the right to be just left alone. Hillsdale College
fought for and eventually won the right to enjoy rights which were
already granted Americans in the U.S. Constitution. If more
Americans educated themselves, the federal monster could be
brought to heel, using powers the people already have in the U.S.
Constitution. The "sheeple" would rather drink beer and watch
TV football, and that is why criminal tin horn federal bureaucrats
are drunk on illegal power. The principle is simple and was
conceived a long time ago by that politically incorrect crowd in
Philadelphia known as "The Founding Fathers." THE POWER
FLOWS FROM THE PEOPLE TO THE GOVERNMENT.
How much simpler can it be said people???????????

There has to be "commerce" involved for the federal government to have
jurisdiction. Remember the ICC?

Well...

Since the US Supreme court was threaten from the Congress in the 1930s that it would stack the court with democrats ,it has upheld every Interstate Commerce claim the Federal government put forth. There is nothing in the US Constitution that indicates there has to be twelve justices. Shortly after democrats took control , democrat Justices were appointed to the court replacing the exiting one. This change is what made the US government grow in leaps and bounds. Shortly after though, democrat Justices were appointed to the court replacing the exiting one. It was not till the Regan years that the court finally saw many Republicans. Before WWII the US tax was only about 7%. During the war the is when the tax grew. It was not till the Regan years that the court finally saw many Republicans. 1995 is the first time since the 1930s the US Supreme court reversed the congress on an interstate commerce in the case of US vs. Lopez.

The problem is that the courts have no real authority. They can only claim a law unconstitutional. They cannot get rid of a law because they don't like it. The district courts were created by congress and could be easily dismantled. What if the president and congress decided to gang on the US Supreme court? The court could do nothing. They only have a few bailiffs. Their pay comes from congress.

So just because a court decides a case does not make it right. They have to appease in many cases and hold on to what power they have.

So you then believe that each and every state needs a local version of the FCC to administer all this? Which would have to coordinate with all adjoining states for frequency coordination and non-interference issues? Or to decide who is and isn't too close to the borders to use "intrstate" radio? When most states are beyond broke and in debt already? Are you serious? Why do you think FCC got the job in the first place?

But just because it was decided that in the past does not mean it will be decided that way in the future.

Maybe the lawyer against the regulation did not present his case very well, or the judge was 100% pro government. It could be any number of reasons.

Things change.

What about the prohibition of alcohol in the 20s?
The biggest reason the was changed because of the people. juries were no longer convicting people on the cases.
But now days the government lies and tells juries they must make decision of the law only.
So many people in this country now days are ignorant sheep. They don't take the time to look up things to learn and accept what they are told. As long as they get their weekends off and watch their cable TV they don't care about anything else.

I have called many government offices and ask them about their particular area they enforce.
Their response is 100% of the time...well according to document..publication..etc etc.
I have to stop them and say..I don't care about that, I want to know the law. That is when they become stupor .

Here is a good example. 2 years ago I apply for a passport. On the application it mentions about according Interal Revenue code requiring your social security number on the application or else there could be a $500 fine

I took the time to look up this US code. It says nothing about SSN. It does mention about tax payer identification number. SSN and TIN are not the same thing. I called both the state department and IRS and they went into that same stupor when I ask them about this. They said they would call me when

they could find out something. I am still waiting. Good thing I did not wait on their response.

I just left reponse area blank. I got the passport 10 days later.

It's all very simple - the state, which ever state it is, is going to raise so much revenue to conduct it's
affairs. The rest is a matter of detail. In my state we pay a state income tax, and the tax on our housing is
quite moderate by comparison with Texas, where your real estate tax on your home easily runs into the thousands
of dollars. But Texas has no state income tax.

They gotcha coming or going, whichever way you happen to be headed.

Why don't you try starting one occasionally? Try the difference between RF which goes every
which way with no regard to where it is, and vehicles which don't.
Unless you happen to be behind the wheel, maybe?

Okay, Bill, now after doing a little bit of research on this (not legal yet, just scanning a Google search) I see that this topic is pretty hotly debated by the black-helicopter kooks and separatist-militia types. I can see why this is a hot-button issue for some of you folks -- I walked right into this one. I assure you, I am not advocating any position on this topic at all, but being both somewhat of a radio enthusiast and a lawyer, these legal issues have some interest to me. I just thought I'd do a Lexis search some time when I had a free moment, and see if the courts have interpreted the use of radio similarly to the use of the telephone -- even if a call is not across state lines, a telephone is an instrumentality of interstate commerce, and is thus subject to federal regulation. That's all. Around here, a little bit of knowledge is a dangerous thing, I guess.

The FCC and most other federal bureaucratic agencies are outlaw agencies, with no legal justification for their existence. They have no basis in the law and are not authorized by the U.S. Constitution. Don't believe it? Take 20 minutes and read your Constitution. I suggest you start with a strict interpretation of the Tenth Amendment. Then again, forget it and go back to your beer guzzling and football games while your kids are being taught to hate the Founding Fathers in their government controlled schools.

: then you may have a winner.

G'day, ya ignorant mate down there. (Damn, you Aussies spell
"license" funny.)

Since almost all counties (and even a couple of states) over here are
only a few square miles, you would have something over 3,000
jurisdictions "regulating" radio, and trying to gain some financial
reward.

Sheeeeeeeeet, and you thought CB was a mess? This would be a cluster
phuque of magnificent and spectacular magnitude!

No, I think what he is saying is that anyone trying to go against well-established legal precedent, and without competent legal advice, is in for a long, hard road. Seek qualified legal counsel with expertise in both the area of law you seek advice, and in the jurisdiction in which you reside.

A classic example of misguided "resistance," and associated kooky legal theories, is the tax avoidance movement. The IRS actually has a detailed FAQ document on so-called "Frivolous Tax Arguments":

http://www.irs.gov/pub/irs-utl/friv_tax.pdf

According to this document, not only will these frivolous arguments be summarily dismissed by the IRS and the U.S Courts, the courts may even assess substantial penalties just for wasting their time.

You are free to "disagree" with the IRS or the FCC, the courts that will uphold their regulations (through multiple levels of appeal all the way up the Supreme Court), and the U.S. Marshals that will sieze your property and your person to enforce the law. However, that is really beyond the scope of judicial review of the legislative and executive branches of government. Resistance at that point falls into the realm of armed revolution. I'll leave that discussion to the conspiracy nuts who form "militias" because they see black helicopters wherever they go.

>I read about a married couple who became homemade biologist after their son
>came up with a rare diesease with no cure. They sure did find one.

Non-sequitur.

Law != Medicine

Furthermore, while neither field is perfect, there's much less
uncertainty in established case law about common legal questions than
there is in medical knowledge about rare diseases.

Next?

Your entire argument is trumped by the proper (and legal)
application of the Tenth Amendment. Perhaps you should take
a high school government class, then come back here and launch
a logical debate.

Good Luck,

John Worthington

That can apply in the case of the county itself holding a land mobile
service license which permits the operation of some number of public
service base stations & mobile units under the same license. County
non-profit emergency services organizations, police, fire, etc. This
guy is apparently tossing signals out on the FM broadcast band for
commercial purposes. Pirates is pirates whether via stupidity or
intent. In either case he's inviting a knock on his door.

And this "intrasate only" crappola is just that. I can routinely copy low-power FM BC stations in four states from here with a decent consumer-level FM rcvr. I've worked six states on 2m FM with 25 watts and a gain whip.

That is a bad example you gave. It makes me also believe that you fall into that US Govt = fact/truth.
That document is written by the people whos job it is enforce the US tax laws and is one sided and biased.
It is their job to enforce tax laws, not interpret them. This is the same thing with the FCC. I probably could go through that document and pick it apart. I am sure they have listed only the cases where persons have lost. Wwhat about the ones who won a court case? The government is also known to let it go and drop everything when a person comes up with a valid point that could very well win in the courts. It would be better to have that one go than go have the law changed in a way they do not want. I am sure there are lots of people the IRS let go.

That instance happened to me when I challenged the Texas automobile liability insurance law. the state attorney requested it be dismissed for "certain reasons."

The "kooks" just seem to make up their own ideas. If you take the time to actaully read those laws then you will see problems with them. They are not written in chinese and do not have to be interpreted.
The US Constitution says that the Supreme court is the interpreter of the Consitution, but that only means the government.

The people are the real final interpreters via juries. This is one of the major reasons why prohibition was finally reversed. Juries finally stopped convicting people of alcohol crimes.

Huh??? The cure for AIDS draws closer but still there is no knowlege to even begin where to find a cure for the common cold. That sounds like much more uncertianty than law.

I like the Sams beers that don't get too odd. Regular is good,
Winter lager is good, and there is one they put something called
grains of paradise in that is pretty good too. Not that I don't like
odd beers, I just don't like the way thay do odd.

Speaking of odd beers, I love Franziskaner wheat with a slice
of lemon, Hops Infusion, Unibroue Maudite, and (oddly enough) Genesee
Red.

Friend of mine and I had a big argument about which was the worst beer,
Carling Black Label or Genesee. To settle the argument we put a sample of
each in separate un-labeled fruit jars and sent them to the University of
Minnesota to be analyzed. The report came back, saying both horses were
going to die.

And in the above "strawman" it isn't NY, but rather it is ANY
state other than Kansas that might be affected. And there is
no way to guarantee that even a 5w FM transmitter in the middle
of Kansas can be limited to ONLY the state of Kansas.
That's not simply common sense, it is also scientific fact.

Cheers,
Bill K2UNK

:
: You have to consider the effect range of the transmitter.
:

If every county can issue licenses, then use a little common sense! A 5-watt transmitter FM transmitter in flat-assed central Kansas is likely to be heard in several surrounding counties who might also be licensing transmitters on the same frequency.

Better yet, a 5-watt FM transmitter in the high country around Denver might be heard in 3 or 4 states!

Now are you getting a clue why the Feds (FCC) has pre-empted the management of radio station licensing?

Like you say, use a little common sense!

With all kind wishes,

de Hans, K0HB

It does not matter if the signal goes into another state.

So I guess you are saying that a 5 watt transmistter in kansas is going to affect a 100,000 watt transmitter on the same frequency in Misouri??

You better study some more

I do use common sense, it is a document that sets up the US Government and
their powers. And one of them is ro regulate commerce among the several
states. Not in a state

With sensible frequency planning, that simply won't happen. Capture Effect allows the use of many transmitters on the same frequency if they are geographically spread in a sensible way. The "5 Watts in Denver" example is a nonsense - we're talking about broadcasting in the FM broadcast band, not NBFM amateur operation. You're talking about receivers with poor sensitivity and selectivity. (You're also talking about listeners who refuse to use a proper receiving antenna, but that's a different issue).

> Now are you getting a clue why the Feds (FCC) has pre-empted the
management
> of radio station licensing?

The FCC has a poor reputation for broadcast planning - they are, frankly, inept. They also have a poor reputation for enforcement of their rules, particularly when it's one of the big commercial radio concerns - there isn't a single FM station in any major American city that isn't operating outside the rules. They are almost invariably overdeviated, carrying "unlicenced" additional services, and putting out substantial amounts of harmonic and spurious rubbish. Many of the problems have been caused by downgrading the engineering jobs (particularly by Clear Channel) to the point where janitors actually earn more (and are often better qualified) than the "engineers"!

Sensible frequency planning? If each county is in charge of their own licensing (there are upwards of 3,000 counties over here in the colonies) how do you coordinate that? Then how do you coordinate between the 48 contiguous states? Damn, maybe this IS a job best left to the Feds, sorta like the FAA keeps airplanes sorted out, etc.

: The FCC has a poor reputation for broadcast planning - they are, frankly,

:

Given that jeremiad of problems by a well funded federal agency, am I to believe that the situation would be better if instead of a single regulator, there were something like 3,000 of them, one in each county across the country, with 1/3000th of the talent available to FCC?

Did someone mention common sense?

With all kind wishes,

Hans, K0HB

In theory radio waves travel indefinitely.

But~~

Use a little common sense.
if Some hobbiest is using a 5 watt transmitter in the center Kansas, will a person in New York pick up that transmission on their auto's FM radio?

You have to consider the effect range of the transmitter.

HAW!

Nonham friend of mine has an "Oktoberfest" party every year. Price of admission is two six packs of your favorite beer, registered with him ahead of time to avoid duplicates. "Blind test" methods are used so the drinkers don't know what they are drinking, and all drinkers rate each beer on a 1-5 scale. Odd to see how some cheap brews score highly while some highly touted stuff gets dissed.

President Lincoln all mode CB radio For Sale, modified
to operate up to 30 mhz.

Also have several linear amps for sale, 300 watts to 2000 watts.

Contact Highway King, I-80 truck stop, west of U.S. 24 just over
the Iowa state line. Stand by channel 17.

Highway King
27880 lower side

I guess Mr. Yagi Uda was wasting his time?

Hey everyone, Dick says we cannot harness the direction of RF!

Hihihihihihihihihi -hah

Yep, that's how they do it.

This
> guy is apparently tossing signals out on the FM broadcast band for

> intent. In either case he's inviting a knock on his door.

You're right.

I hadn't inferred that from the original post. I went back and read
it, then I read his second post stating that it was in the FM
Broadcast Band, and he reiterated "one way."

> And this "intrasate only" crappola is just that. I can routinely copy
> low-power FM BC stations in four states from here with a decent
> consumer-level FM rcvr. I've worked six states on 2m FM with 25 watts
> and a gain whip.

Lotsa fun. I do my broadcast band "dxing" on AM. I use a portable
panasonic sw 500-1600khz. I try to give it 15 or 20 minutes each
evening before my eyes close.

Brian

Yep, when working for the St Louis Corps of Engineers, I lived in Illinois. MO got the bulk of my tax money, IL got the rest. Illinois was a low cost of living area (unlike St Louis), and I had base priveleges which also helped.

In Ohio, I'm paying more taxes on less money, mortgage is $35,000 higher on a 400sqft less home with a 1% higher mortgage. I don't like it.

I'm ready to move to the land of Mickey Mouse.

Now, now, Dick, you know that's false. I support licensing (one full license, one beginners license), I support theory and even history on the exams, along with rules, safety, prop, etc., and I support code.

I do not support code as a stand alone exam, however. Embed code knowledge in the written as is it is with any other mode, and we'll be in complete agreement.

See, we're closer on these issues than you thought.

Merry Christmas.

>could very well win in the courts. It would be better to have that one go
>than go have the law changed in a way they do not want. I am sure there are
>lots of people the IRS let go.

"I am sure there are" is quite different from "Here's who they are."
Handwaving arguments without supporting evidence are fairly worthless.
As I noted above, please be sure to cite legal opinion and precedent in
your analysis. The IRS document enumerates cases in which they have
won. Please give examples where they have lost (or dropped the case)
based on the arguments that the IRS characterizes as "frivolous" in its
document above.

Also, please clarify one point so that we are clear on this. Do you
feel that the IRS document above is a falsehood in its entirety, or that
there is some truthful elements in it, and some untruthful elements?
Which, specifically, are truthful, and which are untruthful?

Do you feel that your position is strong enough that you yourself could
avoid paying federal income taxes, using any of the tax arguments that
the IRS characterizes as "frivolous?" Have you actually done so? Do
you feel that you would have a good chance of the IRS backing down and
letting you go if you used some of these arguments as justification for
not paying your federal income taxes?

[snip!]

>>

I just read it, it confirms what I have been saying. Ham Radio is becoming nothing more than CB, with ARRLs approval. My question is an easy one, since CW testing is History, or soon to be, when are we going to get rid of the Stupid Written Test?
For that matter why are we still testing at all? Why not legally just turn it into CB, that way the FCC is out of it, we can then make up are own Calls and use what ever Freq we wont. Thats the direction were headed, so why delay it, lets just get it over with 1 sweep and be done with it.

As for dropped cases it is going to be more difficult to find. These type of
cases are dropped for reasons. They will not be recorded in a published
record such as case law. In order to find these cases one would have to go
through every single court document in every court house. I have the time
nor resources just to satisfy a few people who don't care to study for
themselves.

> Which, specifically, are truthful, and which are untruthful?

You will notice the title of the document. They only describe "frivilous"
claims.
I am sure none of it is false, but it is portrayed one-sided to favor the
IRS.
The last thing they want to do is be giving people legal advie on how to
make valid claims and making the IRS defunct.

>

>

I am sure I could make a valid claim to avoid paying taxes. If you look over the frivilous claims, most of those people are the ones who are "kooks."

Just off the top of my head i can come up with one which could be a valid claim to at least hold off paying taxs for a while. It is in the Constitution:

as you know, the 16th Amendment allows for collection of taxes. Just because that amendment is in there does not cancel other rights guaranteed.
The 5th Amendment in part states:

"....nor be deprived of life, liberty, or property, without due process of law."

You may not own that US currency per se, but you do own that value that you gained from employment, business dealings, etc.

When was the last time you were given due process when IRS deprived you of your money?

Stop being sheep

Brian:

I've read Silver's editorial. Unfortunately, to me it seemed to have been plagiarized from many other editorials I've seen which had the same basic message. Well, N0AX got this two columns in QST, but I've not been moved toward any "resolution."

Without quoting directly, he basically states that interest in electronics is no longer what drives people to become ham radio operators. I, OTOH, think that it is necessary for hams to have a basic interest in electronics at the nuts-and-bolts (or transistors and IC's) level in order for our hobby to serve one of it's primary purposes -- to be an entry-level hands-on learning experience for future electronics experts who will ultimately advance the technology upon which the world has come to depend. We also need to serve the purpose of being an alternative, backup emergency communications service -- and this means that we need to have retained and mastered proven communications skills which can keep people in contact with each other over various distances under the most extreme conditions. And, yes, this means learning, mastering, and using the Morse/CW mode at a useful proficiency level!

I strongly believe that basic electronics knowledge and Morse Code are two aspects of ham radio which are essential to our mission. Each requires something that is becoming more difficult to find with each passing year: the willingness to make an effort to learn something useful. My experience with ham radio newcomers these days is that they are more interested in the instant gratification of powerful, globe-spanning personal communications than in learning the basics. They want to put the cart in front of the horse. Many claim that they'll learn CW or try some homebrewing "later" -- but "later" never comes. They buy their station off-the-shelf, get someone to help them get it working, and proceed to -- well, not proceed. "Elmers" now have to help newcomers do things that they could easily learn on their own simply by making an effort at individual study. The newcomers don't want to learn how something works, they want to be shown which button to push. And when the button needs to be pushed again, they're stuck with a non-functional whatever-it-is until they can get their "Elmer" involved again.

I'm the kind of ham who learned everything I know by opening books and reading what was inside. Sometimes over and over again until it finally sunk in. When I encountered something I didn't understand, and there wasn't anyone else around to explain it to me, I did some basic research and looked up the answer. I had an "Elmer" (a YL, actually) for a while, but she provided mainly motivation and encouragement. The knowledge I gained on my own. In fact, at that point, as a result of being a non-ham electronics hobbyist for years, I already had most of the technical knowledge I needed to pass my exams all the way through Extra class; I just needed to learn that which was specific to ham radio. I taught myself how to solder. I taught myself how to put a PL-259, or a male BNC connector, or an "N" connector on a piece of coaxial cable. I taught myself the Morse Code -- several times, in fact. I built dozens of kits and home-brew projects, starting with a "breadboard" AM receiver which won my eighth-grade Science Fair.

My point is that new hams these days aren't getting anything like the true Ham Radio experience, mainly because they're so used to instant access to technology that they take it for granted. They don't think there is any need to learn how it got there in the first place. I guess I understand where they're coming from, but I don't' agree that they should be allowed to get away with creating that new paradigm in the ARS. I think that older, "pre-Restructuring" hams, whenever approached to "Elmer" a newcomer ham, should practice "Tough Love." If they want to know how to do something, throw the book at them. Literally. Make them read, study, learn. If they encounter a term they don't understand, then throw *another* book at them. Of course, I don't actually advocate making missiles out of your books -- just tell them what's available and where to buy it.

I've said it before, and I'll say it again -- if it were in my power, I'd do away with Restructuring and retroactively cancel all licenses issued after April 15, 2000. Then I would re-institute the previous licensing requirements and go on from there. We had a great set of licensing requirements, and our system wasn't "broken" -- but those who wanted to get ham radio privileges were. They were broken by having been brought up in a society with instant answers and instant gratification in almost any conceivable endeavor. And when they encounter someone like myself, who was brought into ham radio under a more challenging and comprehensive set of licensing requirements, they accuse us of being backward in our thinking if we don't take the politically-correct stance toward the changes that have been made in recent years. That's you, Brian -- in case you hadn't noticed!

Pardon? We don't sell ANY "cheap and dirty little transmitters" to anyone, anywhere! Any equipment we ever sell is fully type-approved for the country in which it's going to be used. Type Approval in the USA is usually just a question of providing a suitably fat brown envelope, however.

Deregulation of broadcasting is usually a bad idea - the problems it caused in Italy (for example) are well documented. However - conglomerate ownership of virtually all media outlets is a MUCH worse idea!

Take a look at Europe! We're a much smaller area than the USA, but actually have MORE FM stations than you do! We also suffer fewer interference problems than you do! It's just down to sensible planning (even across Country borders), and good engineering practice.

No. We have the EBU, which (by and large) does a pretty good job. This is an international agency. Each country has their own equivalent of your FCC, and these agencies work together through the EBU.

One goal I want to work on is to finally get my Worked All States award,
after over 20 years as a ham! To that end, I'm working on improving my
indoor dipole antenna farm in my third-floor apartment.

>Ryan, KC8PMX

The equipment purchases I'm contemplating for 2003 would be either a
Yaesu FT8900 10/6/2/440 FM mobile rig, or an Icom IC-706 and some
sort of "screwdriver" HF mobile antenna to set up a mobile HF station.
However, considering the fact that I just don't spend any great amount
of time in my car (no long commute to work -- only 4.5 miles one way!)
it would be difficult to justify either.

I'm probably going to increase the capability of my indoor dipole antenna
farm in my apartment by adding something reasonably resonant on 40
meters -- so I could be purchasing some wire, insulators, coax, the
usual antenna stuff.

Franziskaner is an import (I think). It's a classic wheat beer with suspended yeast, the wheat tang and most budcoormiller drinkers won't touch the stuff, since it's cloudy - oh and it has taste too. 8^)

Hops infusion is microbrew. They are serious about the hops. It's very bitter. So you need to like hops - a lot!

Maudite is made in Quebec, and costs horribly down here in PA. The last time I went to Canada I got a fair amount of that. It's a very malty strong beer, very dark. It isn't anything you would drink for refreshment, but more like a beer to have after dinner.

Grade school reading? If you cannot even understand its standard english
language you need not be here.

More to coem on taxes later

The lovely lady who owns the local homebrew shop talked me into making a chocolate porter a while back. Yummy stuff. Tho' the person drinking better like chocolate. In addition to the regular porter ingredients, you add a whole 8 oz can of chocolate malt extract. (real homebrewing stuff-not the grocery store Chocolat malt)

You have consistently railed against those mythical techs who
were in a (supposed) "entry-level" class for NOT advancing the
state of the amateur art...not to mention the "shack on a belt"
demi-pejoratives levelled against same. Tsk, tsk.

There are at least 300K+ morse-tested US radio amateurs who
have been around long enough to advance the state of the
amateur radio art. Where are they, what are they doing? Do
you know? You are one of those.

Why haven't you done more? You've had the time.

>We
>also need to serve the purpose of being an alternative, backup emergency
>communications service -- and this means that we need to have retained
>and mastered proven communications skills which can keep people in
>contact with each other over various distances under the most extreme
>conditions.

That's known as "Field Day," an annual contest where all
faithful "emergency communicators" can get out of the
house and practice their "preparedness" (usually in a park)
on a nice summer day while engaged in friendly contest
points gathering while chewing hot dogs and sipping beer.

Or...one could contact a local civil emergency group and act
WITH them as part of a civic team rather than play-acting
some "ham-hero" in order to rationalize the Field Day fun.

>And, yes, this means learning, mastering, and using the
>Morse/CW mode at a useful proficiency level!

Yes, one never knows when the next Titanic will sink and
"ham-heros" will have to "work traffic" by CW to aid victims.
Ho hum.

>I strongly believe that basic electronics knowledge and Morse Code are
>two aspects of ham radio which are essential to our mission. Each
>requires something that is becoming more difficult to find with each
>passing year: the willingness to make an effort to learn something
>useful.

Please do not model others on yourself.

"Basic electronics" has been covered in all the popular ham
publications for years...and is periodically reviewed in basic
theory articles in ham periodicals. The true basics of semi-
conductor circuits have remained essentially the same for
the last 30 years and the "legacy" transistors and ICs of
1972 are still available today at much lower relative prices
than vacuum tubes ever were. Others younger than Roll
seem to know that subject, yet Roll has never attempted any
discussion on any details of "basic electronics." Why?

>My experience with ham radio newcomers these days is that
>they are more interested in the instant gratification of powerful, globe-
>spanning personal communications than in learning the basics.

That theme has been around worldwide amateur radio since
they were forced into HF and above in the 1920s. That's 80
some years of such "instant gratification" and the addiction
of DXing and collecting pasteboard evidence from far away.

>They
>want to put the cart in front of the horse. Many claim that they'll learn
>CW or try some homebrewing "later" -- but "later" never comes. They
>buy their station off-the-shelf, get someone to help them get it working,
>and proceed to -- well, not proceed.

Snide bullshit, Roll. Look at the "shack" pictures of hams world-
wide in amateur periodicals. Lots and lots and lots of "off-the-
shelf" station equipment owned by LONG-TIME amateurs...like
yourself.

>"Elmers" now have to help
>newcomers do things that they could easily learn on their own simply
>by making an effort at individual study.

Oh? The "Elmer" concept seems to be more smoke and the
mirroring of a fantasy of personal knowledge capability...sort
of like Field Day being one of "emergency preparedness
training."

>The newcomers don't want to
>learn how something works, they want to be shown which button to
>push. And when the button needs to be pushed again, they're stuck
>with a non-functional whatever-it-is until they can get their "Elmer"

>sunk in. When I encountered something I didn't understand, and there
>wasn't anyone else around to explain it to me, I did some basic research
>and looked up the answer.

Of course you did. All your "basic electronics" knowledge
has been demonstrated to back that up. My question is
where? It certainly hasn't been shown on any rec.radio.
amateur newsgroup...

>I had an "Elmer" (a YL, actually) for a while,
>but she provided mainly motivation and encouragement.

Of course you did. Sigh...readers have had a periodic
revelation of Roll's personal sexual fastasies for years.

>My point is that new hams these days aren't getting anything like the true
>Ham Radio experience, mainly because they're so used to instant access
>to technology that they take it for granted.

Define "true Ham Radio experience." [I'm pessimistic enough
to believe that Roll's definition is going to be that Roll's
personal experience is going to be the model for that...]

"Instant access to technology:" Personal computers in the
home faster and more powerful than any mainframe computer
of 1972; international telephone and television and facsimile
communications has been around for a quarter century;
personal portable cellular telephones that have exploded in
quantity in just ten years so that one in three Americans is
now a cell phone subscriber; portable CD players that let
anyone take hours of favorite music with them anywhere,
on the market for less than $100; evil legal unlicensed two-
way radios in the millions on highways and homes (called
"CB") purchaseable in department stores; cordless telephone
sets let anyone use the telephone system for hours from
anywhere in the house or yard, no long cords needed; autos
with keyless secure RF entry locks; remote control garage
door openers, secure and in-use for the last three decades;
a myriad of various electronics on the consumer market,
everything from wireless remote temperature gauges to TV
security cameras (wired or wireless) to digital personal
thermometers and blood sugar measuring instruments.

Thirtysomething US citizens have grown up always having
high technology devices all around them for as long as
they can remember. Why should they go retro-1930s
with one-tube regeneratives and rock-bound two-tube
transmitters?

>They don't think there is any
>need to learn how it got there in the first place. I guess I understand
>where they're coming from, but I don't' agree that they should be allowed

Poor baby...no one honoring or respecting your mighty and
triumphal accomplishments in amateur radio? Tsk, tsk.

Please try to remember that the amateur "service" uniform of the 1930s has changed style. Several times. That hair shirt is no longer the uniform of the day.

Harf, harf, and a Merry Christmas in amateur fantasyland.

This was a valid argument back 50 years ago during the vacuum tube
era. When equipment was somewhat unreliable. And CW rigs were
more reliable because of less tubes needed vs voice modes. But today's rigs
are such that the voice portions are on one or a few ICs and no more
prone to fail than the rest of the rig. And voice is essentially universal,
you can hand the mic to say a doctor so he can give medical advice to
aid a distant victim without the code/decode delays. Also faster to
talk. As for health and welfare traffic, the various digital packet modes
handle that quickly and without tying up people needed for other stuff.

Most likely they'll just abandon ham radio and find something else to
do. Internet or CB....

All they did was reduce the code speed required. The written tests
stayed the same as before. Oh, they may have changed the number
of questions for the extra test (I took the advanced and then the old
extra writtens, 70 questions IIRC total. Now about 50) but the same
material is tested. Reducing the number of questions doesn't necessarily
make it easier. How many "hobbies" require government certifications
anyway? Model railroading doesn't require licensing, nor does
computer enthusiasts.

> Hey everyone, Dick says we cannot harness the direction of RF!

Merry Christmas, you dolt. What Yagi did was take from one direction and
simply add to the other. So then maybe the 'other' becomes strong enough
to cross the state line the other way. or maybe some mobile who
NEVER goes close to a state line suddenly finds it necessary to do so.
The potential for violation is obviously far beyond your comprehension,
which fact we clearly understand. But for your enlightenment that
is why the FCC alone has jurisdiction over RF radiators.
The day when the 'deregulators' in congress change that is the day they
introduce total chaos into the RF spectrum. I think enough of them
already know that.
And stranger things HAVE happened.

Heck, I'm still happily working on 2002's goals. I would like to build
an Elecraft K2/100 though. So much so that I've already downloaded the
entire manual along with the errata sheets to study and have begun to
assemble all the required tools. The Elecraft reflector is also a
great way to learn from other's experiences and perhaps avoid a
misstep or two. (Thanks Jim N2EY.)

>> Please, go right ahead. I (and others) eagerly await your detailed
>> legal analysis. Be sure to quote verifiable legal opinion and
>> precedent, or at least cases that were dismissed before a precedent was
>> set.

>This is radio forums, not tax.

It's a little late to start claiming that a debate is off-topic after you've engaged in it. I'll admit that I brought up the subject of tax law. Tenth Ammendment (and other Constitutional) arguments against the existence of the FCC made by "Patriot," et al, apply (or fail to apply) to the IRS as well. Both the IRS and the FCC are administrative agencies of the federal government, created and funded by Congress, who take general laws passed by Congress and develop detailed regulations, then enforce them, all via administrative law proceedings. The "Frivolous Tax Arguments" document ranks up there with the FCC fact sheets about Madalyn Murray O'Hair:

http://www.fcc.gov/mb/audio/decdoc/letter/1975--08--13--religious.html

and the "modem tax:"

http://www.fcc.gov/Bureaus/Common_Carrier/Factsheets/ispfact.html

as entertaining reading.

Since you've engaged the topic and attempted to debate it (rather than stating up front that it's off topic), it's a bit suspicious to back out of the debate now with the "off-topic" argument. Especially now that it's come down to a request that you actually back up your position with more evidence than hand-waving, particularly if you assert that your position is so obviously right.

>i was giving an example. If you do want a
>detailed aynalisys then I will happy to give one, but it will take time.

Go ahead and take all the time you need. I've been on Usenet for over 11 years. Let me know when you're done, and I'll read it and rebut it. I found the evidence for my position quite easily at irs.gov. Surely if your position is so well-established and obvious, you can easily find respectable opinions on the subject of the IRS and tax law that support *your* position.

>>
>> "I am sure there are" is quite different from "Here's who they are."
>> Handwaving arguments without supporting evidence are fairly worthless.
>> As I noted above, please be sure to cite legal opinion and precedent in
>> your analysis. The IRS document enumerates cases in which they have
>> won. Please give examples where they have lost (or dropped the case)

>record such as case law. In order to find these cases one would have to go
>through every single court document in every court house. I have the time
>nor resources just to satisfy a few people who don't care to study for
>themselves.

I guess you meant to write "I have *NEITHER* the time nor resources..."

You remind me of another person who used to participate on
rec.radio.amateur.policy. I don't want to mention his name because,
like Clive Barker's "Candyman," mentioning his name too often might make
him reappear. He would often make pompous pronouncements about how he
was right, the FCC was wrong, and it was up to his opposition in any
debate to find the evidence that backs up his position, because he
didn't have the time to suffer fools by doing so himself.

>> Also, please clarify one point so that we are clear on this. Do you
>> feel that the IRS document above is a falsehood in its entirety, or that
>> there is some truthful elements in it, and some untruthful elements?
>> Which, specifically, are truthful, and which are untruthful?

>You will notice the title of the document. They only describe "frivilous"
>claims.
>I am sure none of it is false

I'm glad you said that, because if you had said that the document was
untruthful in its entirety, I could ask you whether or not you would
recommend that someone seek a tax deduction as "reparations for slavery"
(see page 25), something that clearly does not exist in any law or
regulation.

>, but it is portrayed one-sided to favor the
>IRS.
>The last thing they want to do is be giving people legal advie on how to
>make valid claims and making the IRS defunct.

So where are the published documents by non-IRS groups that give people
legal advice on "how to make valid claims and making the IRS defunct?"
Where are the case histories of people who have succeeded in these
claims? You assert that such cases are obscure, and thus very hard to
find. I find it hard to believe that anyone who succeeded in avoiding
paying federal income tax wouldn't shout about it to the world, or at
least have people lining up to pay for information about how to do the
same for themselves.

>>
>> Do you feel that your position is strong enough that you yourself could
>> avoid paying federal income taxes, using any of the tax arguments that
>> the IRS characterizes as "frivolous?" Have you actually done so? Do
>> you feel that you would have a good chance of the IRS backing down and
>> letting you go if you used some of these arguments as justification for
>> not paying your federal income taxes?
>>

>I am sure I could make a valid claim to avoid paying taxes. If you look over
>the frivilous claims, most of those people are the ones who are "kooks."

>Just off the top of my head i can come up with one which could be a valid
>claim to at least hold off paying taxs for a while. It is in the
>Constitution:

>as you know, the 16th Amendment allows for collection of taxes. Just because
>that amendment is in there does not cancel other rights guaranteed.
>The 5th Amendment in part states:

> "....nor be deprived of life, liberty, or property, without due process of
>law."

Did you actually read the IRS document?:

http://www.irs.gov/pub/irs-utl/friv_tax.pdf

It specifically addresses the Fifth Amendment argument (starting on page
16), and dismisses it as frivolous. It cites about a half-dozen court
cases, with at least one case where the claim was not only dismissed, a
$4,000 penalty was assessed against the claimant for wasting the court's
time with such a frivolous argument.

Let me make this easier for you, and save some time in this debate (as
well as give you the opportunity to prune out claims that even you admit
are made by "kooks"). You assert that a Fifth Amendment protection
exists against having to pay federal income tax. Please take the IRS
document and "pick it apart" over this issue only, as this is the one
issue you wish to contend. Better yet, why not make yourself a test
case by refusing to pay taxes based on this argument, and let us know
how you fare in the courts? If the case is decided in your favor, or
even if the government drops the case against you, that would go a long
way towards supporting your position.

[snip]

The intent for the establishment of the LPFM service was to avoid
Judge Claudia Wilken (Federal District of Northern California)
ruling in favor of My Favorite Pirate, better known as Stephen
Dunifer (Free Radio Berkeley) whose major defense in operating a
pirate radio station was that there was no class of FM station that
his operation could meet (he neglected to tell the Judge that he
wouldn't have applied for the license had there been one).

The Good Judge wanted to know why there wasn't, and we did a lot of
wheel-spinning to get the program under way to avoid her dumping the
case on that point. Even then, she sat on the decision for more
than two years, but finally did rule in our favor.

>urban ethnic groups in their ghettos which the "majors" do not serve.

My 1997 FCC Telephone Directory does not list a Martha E. Conti nor a
position such as appears in the "letter".

We've seen such "creative writing" all over the place for years.

> won't change that.

Section 301 of the Comm Act. which gives the FCC authority to
regulate radio communication, specifically INCLUDES intra-state
transmissions.

End of case.

Look at _Betteridge_ in 1942 and _Brown_ in 1980 or so. These
pre-date The Congress amending the Comm Act to specifically grant
the FCC jurisdiction over intra-state radio in 1982. That's the
extent that I'm going to do your research for you.

Where did you get your law degree from?

I'll assume you're not being sarcastic -- Marquette University Law School, Milwaukee, Wisconsin. I don't claim to have any particular expertise in this area at all, as you can tell. It strikes me as being a possibly interesting legal research project, and that's all. I will look at Bettridge and Brown, thanks for the leads. I can't afford to sit down and do Lexis searches during the work week, I had thought to do a little browsing this weekend.

I get the impression that every passing comment is taken as "loaded" around these newsgroups.

>
1) Reduce parts inventory to manageable level.

2) Modify homebrew trap dipole system for better SWR on 20 and 15 meters.

2) A few upgrades for my Elecraft K2 (noise blanker, various mod kits)

3) Homebrew 100W class external amplifier of my own design for the K2. Thinking
about a single grid-driven 811. 1000 volts on the plate, zero bias Class B
looks about right..

4) New "Southgate Type 8" homebrew station.

All of the above "if time permits".

The FCCwill find that an interesting point of view.

Sensible frequency planning between counties within a state?
That's good for a few laughs.

Sensible planning...seems that's exactly why it was given exclusively
to the FCC. Can you imagine the lunacy of a county level effort
to manage such coordination.

Maybe it isn't. The signal decays with distance. Engineers calculate
that all the time. That's part of the theory with Part 15 devices.
Low amplitude signal, decay with distance. No harm, no foul.

or maybe some mobile who
> NEVER goes close to a state line suddenly finds it necessary to do so.

People find all sorts of unnecessary things necessary. Like CW
testing.

> The potential for violation is obviously far beyond your comprehension,
> which fact we clearly understand.

Prove the damage caused by Part 15 devices.

But for your enlightenment that
> is why the FCC alone has jurisdiction over RF radiators.

Nope. Locals constables may now imprison CBers. It mad all the
papers during your lifetime.

> The day when the 'deregulators' in congress change that is the day they
> introduce total chaos into the RF spectrum. I think enough of them
> already know that.

Who introduced Part 15 devices? Please describe the (total) chaos.

> And stranger things HAVE happened.

Yeh Dick, but those hams on the east coast are trying so hard to to
have a Two Way On Two (twot) QSO with the UK or Spain, but it just
isn't happening. Perhaps your brand of RF won't obey interstate
commerce rules, but it sure is rejecting the international free trade
rules.

If Arkansas doesn't want to hear Missouri RF, they can build a faraday
cage.

Meanwhile, my body becomes a guinea pig for cell phone rf that I'm not
legally allowed to listen to. Who thought that stupid crap up? Your
all knowing deregulators?

> They do that every day. It's called "interpretation".

There is no interpretation of laws by any court including the U.S. Supreme Court. The laws simply mean what the words in them say.

Thus "[a]bsent a clearly expressed legislative intention to the contrary, that language must ordinarily be regarded as conclusive." Consumer Product Safety Comm'n v GTE Sylvania, Inc., 447 US 102, 108, 64 L Ed 2d 766, 100 S Ct. 2051 (1980). (remarks of Sen. Dirksen).

"In a statutory construction case, the beginning point must be the language of the statute, and when a statute speaks with clarity to an issue, judicial inquiry into the statute's meaning--in all but the most extraordinary circumstance--is finished; courts must give effect to the clear meaning of statutes as written." Estate of Cowart v. Nicklos Drilling Co., 505 US 120 L Ed 2d 379, 112 S Ct. 2589 (1992)

"In deciding a question of statutory construction, we begin of course with the language of the statute." Demarest v. Manspeaker, 498 US 184, 112 L Ed 2d 608, 111 S Ct. 599, (1991)

"The United States Supreme Court cannot supply what Congress has studiously omitted in a statute." FEDERAL TRADE COM. v SIMPLICITY PATTERN CO., 360 US 55, p. 55, 475042/56451

"The starting point in any endeavor to construe a Statute is always the words of the Statute itself; unless Congress has clearly indicated that its intentions are contrary to the words it employed in the Statute, this is the ending point of interpretation." Fuller v. United States 615 F. Supp. 1054

(D.C. Cal 1985) , West's Key 188 quoting Richards v. United States 369 US 1, 9, 82 S. Ct. 585, 590, 7 L.Ed. 2d 492 (1962)

Wasn't there a plan for this a while back call Wilderness Protocol, or
did it go the way of the LiTZ alert? Monitoring 146.520 ten minute prior
to and ten minutes after the hour? I know a lot of places never caught
on, but I've tried to keep following it (Actually got someone one time
who need some help finding a trail)

For simplicity's (and brevity's) sake, I'll just stick to Amateur Radio
goals, since that list's a lot shorter:

1- to pass the CW test (actually, I feel quite ready to pass it now, but
there are no VEC exams scheduled around here until the first week of 2003);

2- to upgrade to General; and

3- to make a decision on, and actually purchase, an HF rig and antenna (will
it be HF + 6 meters?? Two antennas, or one? Decisions, decisions)

Happy holidays, everyone!!

I'm planning on buying either an HF rig, or an HF + 6 meter rig. Which one, I'm not sure yet. I'd also like to educate myself on antennas and RF propagation to the point where I could feel confident in building my own antenna, simple though it might be. I'd like to end up with two antennas, actually; a vertical (which I'd probably just buy from a commercial source like Cushcraft or Butternut), and then maybe try to build a dipole of some sort.

Well, Larry, I'm a member of the American Radio Relay League. That
means I can relay messages. That means I don't have to rely on my
signal to always be the signal that always gets through to the very
end of the circuit. My signal only has to go so far, then the next
guy takes his turn with it. At least that's what cooperating amateurs
do. Are you a cooperating amateur or just an official bulletin

station?

Does that sound like a good plan?

> I strongly believe that basic electronics knowledge and Morse Code are
> two aspects of ham radio which are essential to our mission.

Mission essential? Sounds military. In the service, did the guy that
used the radio have to know how to fix it?

What was the radio fixer called?
What was teh radio user called?

What kind of license does the FCC issue? A user license or a fixer
license?

Each

Larry, "Elmer" is an idea from long ago. They aren't there anymore,
much like the mythical Extra that cruises the Novice Subbands giving
out CW contacts. In todays language, they would be Urban Legends.

Larry, go see what the kids are doing in science fairs these days. I
judged a very YL who studied chicken embryos that went up on a Shuttle
Mission.

Another who wrote basic code to calculate the Southern Oscillation
Index.

> My point is that new hams these days aren't getting anything like the true

Larry, I earned my WAS back in the 80's. On 10m. What did I learn?
The state across the river was much harder to get than Alaska or

Hawaii. Hmmm. Why was that? I worked most of them during daylight. Hmmm. Why was that?

The Bellevue ARC was astounded at the log sheets I kept handing to them at field day.

Yep, I'm a "bad" ham. Sumptin fer nuttin. No contributions to the state of the art from me. At least not yet.

Nor from you. Hmmm. What does that make you?

You want tough love? Why haven't you completed WAS? Are you some kind of slacker?

Merry Christmas anyway.

Sounds -real- good. There's a pound of choc malted barley in the
recipe, along with loads of roasted barley and some black patent.
I'll use White Labs WLP007 yeast to keep it dry - I don't like sweet
beers. I keep playing with ProMash, trying to get the OG up over
1.100, but I'm stuck at 1.097.

Have you tried the rec.crafts.brewing newsgroup?

Brian

Attributions are not indicated, because I'm addressing individual comments.

> You have consistently railed against those mythical techs who
> were in a (supposed) "entry-level" class for NOT advancing the
> state of the amateur art...not to mention the "shack on a belt"
> demi-pejoratives levelled against same. Tsk, tsk.

What is a neophyte to the world of amateur radio supposed to do then? How can I, or anyone, precognitively advance an art whose inner workings we are not yet familiar with? We learn, then we advance, then we pass it on. Isn't that generally how learning any skill goes? "Shacks on the hip" are a good and reasonably priced way of getting into the VHF/UHF aspects of the hobby; there has got to be a place to start.

Do we garner a modicum of respect from the elder hams because we've showed our willingness to learn enough about amateur radio to pass the entry level exam, or should we hesitate long enough to do so in order to study for not just the entry level (element 2) exam, but ALSO the elements 1, 3 and 4, and then pass them all at one sitting, just to show our devotion to the craft? I'm sure that some have done this, but I certainly couldn't. After all, I work and raise a kid on my own. It's the order of priorities, you know.

Then again... the hams I've talked to on the air are very different from some of those that post to this forum. So far, on the air, I've experienced nothing of the kind of treatment that is being implied here. I have talked with amateurs who hold Advanced, General and Extra licenses, and they are all quite helpful. Of course, I take everything I read here with a grain of NaCL, because this is, after all, a newsgroup. Usenet brings out the blowhard in all of us. Or at least all of us who use our fingers to show the thinking, which then removes all doubt. On BOTH sides of ANY given issue, mind you.

> >I strongly believe that basic electronics knowledge and Morse Code are
> >two aspects of ham radio which are essential to our mission. Each
> >requires something that is becoming more difficult to find with each
> >passing year: the willingness to make an effort to learn something
> >useful.

I feel that I've learned a lot of useful things since studying for the entry level license, and now again on the path to my next upgrade. Code study has been a part of it, but no more so than has the study of RF propagation patterns via different kinds of antennas, or what rigs work best on HF, or the whys and hows of conducting one's self on the HF bands (and I'm not on them yet). Some people will pass the written tests as they are given today, as well as the CW test at 5 WPM, only to find themselves abused by some people on Usenet for riding in on the tails of the lowered expectations of

the FCC for licensure in the hobby. Funny how I've not found this to be the case on the air.

Guess what? It really does not matter what you think of the qualifications of licensure nowadays. A proven 5 WPM CW speed proficiency and the present test pools are what we newbies need to pass for entry into the hobby. Don't like that? Then don't talk to us on the air. Or here, for that matter. In fact, whenever a new person comes into this group and publicly announces their callsign, why don't you look it up on a callsign database to determine if they are a "No Code Tech", and just killfile them to start out? It'd save you a lot of frustration. No risk of potential contamination by rubbing elbows with the great unwashed masses of us inferiors.

> >My experience with ham radio newcomers these days is that
> >they are more interested in the instant gratification of powerful, globe-
> >spanning personal communications than in learning the basics.

With all due respect, that is a load of pure bullpucky. Anyone can get into "powerful, globe-spanning personal communications" just with what you and I are using right now- the Internet. You can download any number of 'instant messenger' type programs for nothing. I feel that if someone wants to accept the greater challenge of learning how to communicate globally without the benefit of an Internet connection (by maybe by only using a length of random wire and a very basic transceiver), then you and every other experienced ham ought not to be judging them via your own jaded standards.

You aren't familiar with the intentions of every single newcomer to the hobby. Unless you have *personally* talked to every single newcomer to the hobby since you've been in it, then do consider YOUR opinions to be but your own personal summation of "ham radio newcomers", and be careful not to base the future prognostication of the entire hobby on your small cross-section of experience.

> That theme has been around worldwide amateur radio since
> they were forced into HF and above in the 1920s. That's 80
> some years of such "instant gratification" and the addiction
> of DXing and collecting pasteboard evidence from far away.

Ahem. I don't see anyone "forcing" anyone into anything in this hobby. Oh, I understand that some people may feel "forced" into passing the CW test (at whatever speed) so that they can get privileges to use HF, but as far as I'm concerned, dollars are *much* more of a factor in getting onto the HF bands successfully than is the code certification.

> >They
> >want to put the cart in front of the horse. Many claim that they'll
learn

This scenario cannot describe all newcomers, because I am a living refutation of your pat contention. I am very interested in (and actively

learning) how to build a radio, and am doing hands-on practice of soldering techniques, as well as studying basic electronic theory apart from AR. And, I thought this hobby had room for a number of people who were interested in it enough to obtain a license and explore the various modes it has to offer, even if that means that they buy a commercial rig that someone else put together.

Problems arise when some experienced hams think that the newcomers SHOULD know this-or-that in order to further the hobby, and the problem lies solely in the fact that "this-or-that" ALWAYS has to do with living up to the judging party's subjective expectations. As long as there are no laws that say that hams MUST get onto certain bands, or learn certain modes of operation, or learn how to homebrew radios or antennas, then lay off already. I don't think you would take kindly to another ham telling you how to enjoy your hobby.

What initially attracted me to this hobby was the fact that there are so many aspects of it to explore. No ONE aspect of this hobby should be used to exemplify standards and hold others to an unreasonable standard of operation if it is not required for the license or an upgrade.

> >"Elmers" now have to help
> >newcomers do things that they could easily learn on their own simply
> >by making an effort at individual study.

Did you ever know how to build an HF rig without help from anyone? Now, everyone could check out a how-to book from the library, but not everyone has the background or experience to intuitively know what it was saying. Do you really advocate solitary study as the best way to learning this hobby? What's wrong with Elmering anyway? I think it's an appealing aspect to this, or really any, hobby. If you are telling us that you learned EVERY single thing you know about amateur radio on your own, and you didn't consult anyone but a book to gain your knowledge, then I am led to think that you either possess an impressive amount of retention of what you read, or you are just posturing like a peacock for the newsgroupies.

> >The newcomers don't want to

That describes me for sure, Larry. Fact is, you don't know me, or most new amateurs. You are prejudiced and sour. I am sorry for whatever experiences came into your life to make you this way.

> >My point is that new hams these days aren't getting anything like the
true
> >Ham Radio experience, mainly because they're so used to instant access
> >to technology that they take it for granted.

What's that? The answer would be (reading between the lines, of course) "my subjective opinion of what the ham radio experience is".

> "Instant access to technology:"

You are beginning to sound like a neo-Luddite.

> Thirtysomething US citizens have grown up always having
> high technology devices all around them for as long as
> they can remember.

Right, but is that our fault? Wow, what did I miss by being born in the 60's? Let's see...geez, I really feel that I missed something by not ever having washed a load of clothes on a washboard. What I would have given to have known what it was like to visit a doctor for a raging infection, only to be given some folk herbal remedy that didn't work because antibiotics hadn't been invented yet? And I never had to crank up the engine to start my Model "T" on a sub-zero morning either. Damn, the character-building experiences that could've been, if only I had been born in Ought-Six.

I've said it many times: these ARE the "good old days" and I consider myself lucky to have been born when I was. Can't help that.

> >They don't think there is any
> >need to learn how it got there in the first place.

News flash: the fact that there may be no NEED for us to learn how it got there in the first place doesn't keep some of us from wanting to know how things work and how things got there, anyhow... surprise!! Some of us newbies may be threatening to breach your hull of prejudice. All hands on deck!!

> >I think that older,
> >"pre-Restructuring" hams, whenever approached to "Elmer" a newcomer

I like it! Vermillion's a beauty, for sure... can't say that I ever fished it though. The BWCA is heaven in the summertime, as long as you have the 1000% Deet handy. Also, the stargazing is better there than anywhere else in the state. Can't wait to get up there again next summer.

You shouldn't think that all-things-not-Dave-thought are untrue. Trent is
probably speaking of the true story from which a movie was inspired, called
Lorenzo's Oil. From http://us.imdb.com/:

Date: 14 October 2002
Summary: Really,really great!

Wow!,what a film.Based on a true story about little boy Lorenzo who gets an
incurable disease called ALG.Parents never gives up to get a cure for the
disease.And a cure there is,in form of an oil.This is an
heartwarming,interesting and very important movie.Great performances all

around.Especially Nick Nolte who did a great job with his italian accent.Definately one of his best performances. Sarandon and Ustinov are also great.Not to mention the little boy who played Lorenzo,fantastic. However this movie is not so well known.For us who have seen it,we all agree this is one outstanding movie,that sticks to your mind for a long time...

It's also not exclusive--there are folks who've pioneered their way past what was told to them by whomever. I've won two cases in court by myself. There's no movie of them, though--there's no movie of a lot of great folks who think outside the box.

But, you live by the book...

Frequency coordination (for amateur radio, anyway) is purely political--I'm told. I never have gotten involved with the concepts of it at all for all the politics it sounds like are involved, i.e., it's just one of those things to stay constantly pissed off about--and I don't want to be constantly pissed off.

Ah...OK. See, I thought the LPFM was supposed to have been a free-for-all for anyone under certain power limits and under certain categories of operating (educational, etc.). It seems to me that the foundation of the LPFM can be challenged in that way? Maybe that is what these counties are doing...or maybe they don't know/believe they are doing anything wrong.

And so physics is changed forever? RF no longer obeys physical laws?
RF cannot be controlled and always crosses state lines.

You and Dick must agree.

Yep. There was one at the Mogadishu airfield. It linked our
telephone network to the former Embassy. Whenever a C-5 parked in
front of the dish, contrary to Dick's belief, RF did not cross that
boundary.

You'll also get a Rev. B model, too!

From my perspective, the "ultimate" implementation is to put the 100W amp and tuner in a separate EC2 enclosure. Requires a bit of homebrewing because of unnecessary restrictions forced on law-abiding hams by the violations of cbers and freebanders.

A neat thing about those kits is you can build the basic one and add features as time/money allow.

>The Elecraft reflector is also a
>great way to learn from other's experiences and perhaps avoid a

Yep. Also a lot about how the rigs work, and the thinking that went into the design. The PLL system is particularly interesting.

Consider a research grant recipient from Massachusetts at a federal installation in Texas attempting to send radio commands to an instrument package on a balloon in the stratosphere over New Mexico. It seems to me that interference from an unlicensed transmitter in New Mexico is a federal matter, since interstate commerce is certainly involved, even if the receiver and the interfering transmitter are in the same state.

This isn't a hypothetical situation: I was the guy repeatedly pushing the buttons on the uplink encoder...

>there has got to be a place to start.

"The place to start" according to the commentary by renowned
1x2s of long tenure in here is to respect, revere, and never (ever)
say anything nasty (however slight) to them. They are Da Boss
In Da Hood. :-)

Other than that, everyone begins at the beginning... :-)

>Do we garner a modicum of respect from the elder hams because we've showed
>our willingness to learn enough about amateur radio to pass the entry level
>exam, or should we hesitate long enough to do so in order to study for not
>just the entry level (element 2) exam, but ALSO the elements 1, 3 and 4, and

>I'm sure that some have done this, but I certainly couldn't. After all, I
>work and raise a kid on my own. It's the order of priorities, you know.

I think it's a fine thing you are doing and you have priorities
in order. Those same renowned (or was that 'reused'?)
long-tenured 1x2s seem to rate the hobby of amateur radio
as a mythic "career" which takes priority over and above all
other aspects in life...at least from what they write in here.

>Then again... the hams I've talked to on the air are very different from
>some of those that post to this forum. So far, on the air, I've experienced
>nothing of the kind of treatment that is being implied here.

With the advantage (or disadvantage) of a few more years on
this planet than most, I can report that there definitely are
those amateurs who are indeed just like those who try to be

Da Boss in here. That's not an inducement to "join their
service" and march to their commands (and commandments).

>I have talked
>with amateurs who hold Advanced, General and Extra licenses, and they are
>all quite helpful. Of course, I take everything I read here with a grain of
>NaCL, because this is, after all, a newsgroup. Usenet brings out the
>blowhard in all of us.

I've worked (in the alleged evil of professional radio-electronics)
with and for those who had been granted amateur radio licenses.
Those are good people...but they (unlike the ARRL labels) were
not "hams first, professionals last" folks since they had their
priorities in order.

>Or at least all of us who use our fingers to show the
>thinking, which then removes all doubt. On BOTH sides of ANY given issue,
>mind you.

There is only one way, that of the Da Boss. No "sides," no
"issues." Never correct Da Boss for they are always right.
They have turf and own Da Hood through long tenure and the
beloved 1x2 call demanding of respect and admiration and
(in some cases) worship. :-)

>Guess what? It really does not matter what you think of the qualifications
>of licensure nowadays. A proven 5 WPM CW speed proficiency and the present

>if they are a "No Code Tech", and just killfile them to start out? It'd save
>you a lot of frustration. No risk of potential contamination by rubbing
>elbows with the great unwashed masses of us inferiors.

It seems to be a Thing of rank in a "service," a mythical
construct of Brotherhood (a male thing, unfortunately) in
an elite, exclusive Organization. A fraternal order surrogate
with turf and trappings. To some it is no longer a hobby
(they will always argue "it's a service!" with a predominant
challenging exclamation point) but their main preoccupation
and perhaps obsession in their life. Wrong priorities.

Amateur radio remains a Hobby, an avocation, a radio
activity done for personal pleasure and recreation. It
requires licensing as part of the regulation of all radio
to mitigate interference for all due to the physics of EM
radiation the same as for all radio services.

<some snippage>

>> >My experience with ham radio newcomers these days is that
>> >they are more interested in the instant gratification of powerful, globe-

>> >spanning personal communications than in learning the basics.
>
>With all due respect, that is a load of pure bullpucky. Anyone can get into
>"powerful, globe-spanning personal communications" just with what you and I
>are using right now- the Internet. You can download any number of 'instant
>messenger' type programs for nothing.

As I was "reading the mail" here, a telephone call came in from my sister-in-law. She was calling from her cell phone in down-town Tacoma, a thousand miles north of here. A cell phone is a little two-way radio. Earlier this month I've carried on written communications with a UK radio amateur via the Internet which included several images attached to e-mail. We can all see international TV news imagery, hear sound accompanying from anywhere in the world, daily.

The argument trotted out to counter that is that "ham radio is free, not needing all the infrastructure of commercial comms." First of all, an "infrastructure" exists called the FCC whose task it is to regulate all US civil radio (not just amateurs). Second, amateur radio is not free...it costs money to own manufactured equipment or it costs time to make one's own equipment...and it costs a minor amount for electrical power however derived to operate the amateur radio.

>I feel that if someone wants to
>accept the greater challenge of learning how to communicate globally without
>the benefit of an Internet connection (by maybe by only using a length of
>random wire and a very basic transceiver), then you and every other
>experienced ham ought not to be judging them via your own jaded standards.

I don't think the judgemental types have "jaded standards," but are confused as to their priorities and involvement in some mystique of following traditions...in addition to making them appear to be some wondrous wizard of radio worthy of respect and admiration (and worship). They've lost the Fun aspect, the personal pleasure of communicating in trying to twist this Accomplishment into something that it isn't.

In a couple of months from now I'll mark my 50th anniversary of first QSY on HF during military service, done on a 1 KW RTTY transmitter in Tokyo to a receiver in Anchorage. One hour of on-the-job instruction on how-to-do-it-properly including changing the crystals in the exciter and setting the Mark and Space frequencies. I wasn't trained for that in the service...my MOS was microwave radio relay, equipment to arrive in the next year. Meanwhile the station was busy transmitting military comm from Tokyo to elsewhere in Asia and to the continental USA 24/7.

The point is to illustrate that HF communications is well known and has been since before WW2 to the military and commercial world. It isn't some recent breakthrough in any state of the art,

certainly not by radio amateurs. It doesn't require any terrific set of smarts to do that on a smaller scale as an avocation. All it takes is some personal knowledge acquisition and a personal willingness to go ahead and do it. No one, repeat No One, is obligated in amateur radio to obey any tradition or mythical, mysterious "standards of conduct, jargon, morals or ethics," just following established regulations for radio amateurs.

Where Roll and other self-renowned 1x2s fall off the truck is in their terrible insistence that the regulations that they had to meet in their early amateur time MUST remain intact for all time and that regulations MUST revert to that even after being changed. Such insistence is simply trying to set themselves up as some model of amateurism, a god-hood complex of ego and self-delusion. All because they received a license grant in the past and have elevated that certificate as the equivalent of being a Nobel Laureate.

Regulations on US amateur radio are not carved in armor-cased granite or on some mountain in South Dakota. They were enacted by humans and they can be changed by humans.

>> That theme has been around worldwide amateur radio since
>> they were forced into HF and above in the 1920s. That's 80
>> some years of such "instant gratification" and the addiction
>> of DXing and collecting pasteboard evidence from far away.
>
>Ahem. I don't see anyone "forcing" anyone into anything in this hobby. Oh, I
>understand that some people may feel "forced" into passing the CW test (at
>whatever speed) so that they can get privileges to use HF, but as far as I'm
>concerned, dollars are *much* more of a factor in getting onto the HF bands
>successfully than is the code certification.

The terrible insistence to keep the Code Test is a result of many things, predominant being that the PCTAs passed their test and feel oh, so superior because of it. The FCC has said publicly that it did not consider any code test to be worthwhile for its license granting purposes a dozen years ago and again three years ago. WRC-03 is coming up soon and we will all see what becomes of ITU-R Recommendation S25.5.

>This scenario cannot describe all newcomers, because I am a living
>refutation of your pat contention. I am very interested in (and actively
>learning) how to build a radio, and am doing hands-on practice of soldering
>techniques, as well as studying basic electronic theory apart from AR.

Everyone should be able to do what interests them, fascinates them, provides recreation as well as personal discovery. I see nothing wrong with that. Radio and electronics proved so personally fascinating and interesting that I made a career in that field and remain active in learning more, experimenting, and

trying out new things. That is not The Way according to one
self-renowned 1x2 Boss in here who Insists on achieving an
amateur license grant as the Only Way to demonstrate interest.
:-)

>Problems arise when some experienced hams think that the newcomers SHOULD
>know this-or-that in order to further the hobby, and the problem lies solely
>in the fact that "this-or-that" ALWAYS has to do with living up to the

>say that hams MUST get onto certain bands, or learn certain modes of
>operation, or learn how to homebrew radios or antennas, then lay off
>already. I don't think you would take kindly to another ham telling you how
>to enjoy your hobby.

It's "Da Boss" complex demonstrated. Do as they command or
be forever condemned to a lifetime of personal pejoratives
uttered from their lofty pedestal. Failure to achieve Their
Personal Standards is a "threat and insult" to 680 thousand
other radio amateurs. :-)

>What initially attracted me to this hobby was the fact that there are so
>many aspects of it to explore. No ONE aspect of this hobby should be used to
>exemplify standards and hold others to an unreasonable standard of operation
>if it is not required for the license or an upgrade.

Absolutely!

As I've said, I've personally found radio and electronics to be a
fascinating and interesting field of technology that continues to
amaze me with the increasing inventions and innovations done
by hundreds of thousands of professionals in the world in just
about a century of time.

>> Thirtysomething US citizens have grown up always having

>Model "T" on a sub-zero morning either.

Does a Model A count? [not mine, a high-school buddy's back in
the prehistory of the '50s] :-)

>Damn, the character-building
>experiences that could've been, if only I had been born in Ought-Six.

:-)

In a half-century of hands-on experience in radio communications including interplanetary and terrestrial distances, I've never had to know or use or test for morse code skill in any professional work.

However, I am supposed to believe that morsemanship is a necessary skill for amateurs because "it gets through when nothing else will." Of course. That's why all those other radio services either never considered the mode in the first place or have dropped its use altogether. Morsemanship is alive and unwell in amateur radio for one major reason: Da Bosses had to do it (when they were young) and all the (ptui) newcomers better damn well do so, too! Laws have to remain on the books because They are Da Boss.

>Merry Christmas. I hope that Santa brings you the gift of perspective.

As a former pro artist-illustrator, I have to remark that "perspective" has a thing called the vanishing point.
Roll's apparent view has already reached that point. :-)

Happy Holidays.

>I'm sure that some have done this, but I certainly couldn't.

Which is why there are several license classes and corresponding tests. Permits newcomers to get started with the basics, then progress to more advanced stuff at their own pace. Been that way for decades. Not a bad system, either.

>Then again... the hams I've talked to on the air are very different from

Well said! But you'd be amazed how many times what I do as a ham has been the
subject of ridicule and put-downs here. Only here, too.
>
>What initially attracted me to this hobby was the fact that there are so
>many aspects of it to explore. No ONE aspect of this hobby should be used to
>exemplify standards and hold others to an unreasonable standard of operation
>if it is not required for the license or an upgrade.

I would say that there should be a body of "core" knowledge that is required of
all hams as a foundation. Then each ham can go in whatever direction attracts
them.

Of course what's in that "core" will be the source of endless debate...
>
>> >"Elmers" now have to help
>> >newcomers do things that they could easily learn on their own simply
>> >by making an effort at individual study.

>Did you ever know how to build an HF rig without help from anyone?

Actually, yes, unless you count the books I read as help.

> Now,
>everyone could check out a how-to book from the library, but not everyone
>has the background or experience to intuitively know what it was saying. Do
>you really advocate solitary study as the best way to learning this hobby?

Nope. In fact, having done it that way myself (including building my first rig), I'd say that solitary study is simply one way out of many.

And even I had "Elmers" in the form of those who wrote the books at a level I could understand. Once I got started and met other hams, I could no longer calim "solitary study", anyway.

And today we have one of the most powerful Elemering tools ever imagined - why shouldn't we use it?

--

The simple fact is that the folks who are attracted to ham radio are, and have always been, mostly those who are interested in radio for its own sake. Whether that interest was technical, operational, or just wanting to talk to somebody via radio. Licenses and tests for them exist to keep order and promote the general structure of the service. All the rest is details.

See you on the air!

Looks like recent events by k1man have not
helped things that much. In fact it seems
to have taken the channel down Cuckoo's Nest Lane.
[perhaps it was there all along?]
14.275 all afternoon.has been a 3-ring circus.
While Maine is transmitting with peanut-butter in ears,
there were ten stations talking over him all at once. This
was accompanied by various potty-mouth and generally
retarded commentary, broccoli fart noises, ginger ale
gaseous-grade belching, SpongeBob Squarepants .wav's,
some guy playing a "mouth organ" (that's a harmonica
for the uneducated) taped music, a kid making "goo-goo
baby" noises (95% probability "goo-goo baby" tape is transmitted
from the Flushing NY area) some old farts talking about
how to make potato soup, the F-word sent in CW over
and over, and a perennial station down South who's
chastising everyone who's talking over Maine's Broadcast.
You want it, they got it and a everything in between folks, it sounds
like the old 14.313 War all over again. Amazing that
grown men an act like this, sounds like a bunch of 8 year
olds in a sandbox that just found out the stray cats been using it
as their litter box at night! All in all a quite an amusing time on the
ham ray-deeoh. Makes me comfortable in the knowledge that ham radio
is still the best screwball magnet we have going. Looks like
14.313 is baaaaaack my SWL's !! (sound of toilet flushing)

Merry XXX-mas (from Suzie da "kiebassa queen")
Happy Hanukkah bush (you all messhuga!)

And another CBer adds his/her comments. Myself, I'm happy with 2 meters and 440 FM although my license allows more. Australia - all rf path - has been no problem. Had a chat with friends in British Columbia today (although this was supported, in part, by internet linking). Who cares? I haven't received qrm in quite some time (like ... um ... 35 years). Life is too short to live with your panties tied up in knots. HF is best experienced with digital modes. The lids haven't gravitated there yet. The repeater? Well, we had a couple of problems. Only two. Neither lasted for more than a couple of minutes (in any case, I didn't suffer - the one guy had to suffer 40 words per minute CW from me, however ;) The other had the rug pulled out from under him. For every frequency with a problem (allowing 3 KHz bandwidth) there are thousands without problems (and that would be HF plus, perhaps, 6 meters - a lot more if you allow those frequencies above 6). If you enjoy listening to problems, go ahead but don't complain. If you don't, QSY. End problem. I think I'll see if Bill, VE7DTM, is back on the air.

To be clear on what the statues actually say, note the "subject to the
provisions of section 301 of this title" included as an exception.
Section 301, in part, says this:

Sec. 301. License for radio communication or transmission of energy

It is the purpose of this chapter, among other things, to maintain
the control of the United States over all the channels of radio
transmission; and to provide for the use of such channels, but not the
ownership thereof, by persons for limited periods of time, under
licenses granted by Federal authority, and no such license shall be
construed to create any right, beyond the terms, conditions, and periods
of the license. No person shall use or operate any apparatus for the
transmission of energy or communications or signals by radio (a) from

one place in any State, Territory, or possession of the United States
or in the District of Columbia to another place in the same State,
Territory, possession, or District;
[...]
except under and in accordance with this chapter and with a license
in that behalf granted under the provisions of this chapter.

This seems pretty clear. States regulate the intra-state business activities
of carriers which may be radio licensees (along with wireline carriers; the
state PUC usually does this) but only the FCC has the authority to grant
the licenses.

The two instances of "State," in 301(a) quoted above were only added in
1982, so before then the requirement for federal licensing may have relied
on the more ambiguous 301(d) concerning inter-state interference. There
is now no ambiguity at all, however.

>"The place to start" according to the commentary by renowned
> 1x2s of long tenure in here is to respect, revere, and never (ever)
> say anything nasty (however slight) to them.

You are once again challenged to produce even ONE quote that supports an assertion of yours...this one in particular, Your Supreme Lyiningness.

>Other than that, everyone begins at the beginning.

That being true, perhaps you'll haul your waning lifeforce down to a VE session and take the test and BEGIN to really enjoy Amatuer Radio rather than spend all this time trying to denigrate it?

>I think it's a fine thing you are doing and you have priorities
> in order. Those same renowned (or was that 'reused'?)
> long-tenured 1x2s seem to rate the hobby of amateur radio
> as a mythic "career" which takes priority over and above all
> other aspects in life...at least from what they write in here.

Another opportunity to prove yourself right and provide a quote from one of those "1x2's" that supports yet another silly assertion of yours...?!?!

>With the advantage (or disadvantage) of a few more years on
> this planet than most,...(SNIP)

And thankfully more behind you than ahead...

>...(UNSNIP)...I can report that there definitely are
> those amateurs who are indeed just like those who try to be
> Da Boss in here. That's not an inducement to "join their
> service" and march to their commands (and commandments).

As opposed to those WITHOUT a license who try to be "Da Boss" in here, Lennie...?!?!

>There is only one way, that of the Da Boss. No "sides," no
> "issues."

WHEW...! ! ! SERIOUS "pot/kettle/black" syndrome, Lennie! You must BATHE in this stuff!

>Never correct Da Boss for they are always right.
> They have turf and own Da Hood through long tenure and the

> beloved 1x2 call demanding of respect and admiration and
> (in some cases) worship.

Or in THIS case NEVER "correct" the "professional radio engineer" because
HE has HIS priorities correct!

>It seems to be a Thing of rank in a "service," a mythical
> construct of Brotherhood (a male thing, unfortunately) in
> an elite, exclusive Organization.

Another liberal-socialist rushing to do the "politically correct" thing
and participate in a little public self-abuse. Getting in touch with the
feminine side, Lennie?

>To some it is no longer a hobby
> (they will always argue "it's a service!" with a predominant
> challenging exclamation point) but their main preoccupation
> and perhaps obsession in their life. Wrong priorities.

Thankfully it's NOT your place, in ANY circumstance, to decide what's the
appropriate "priority" for any other persons life or lifestyle, Lennie.

>Amateur radio remains a Hobby, an avocation, a radio
> activity done for personal pleasure and recreation. It
> requires licensing as part of the regulation of all radio
> to mitigate interference for all due to the physics of EM
> radiation the same as for all radio services

Amateur Radio MAY be "just" a hobby to many. For others it IS a lifestyle
and IS a vocation. That YOU deem it "just" a hobby is your OPINION, NOT a
"fact". It is not for yo9r to decide what "priority" that it should occupy in
thier life.

>The argument trotted out to counter that is that "ham radio is
> free, not needing all the infrastructure of commercial comms."...

Amateur Radio....Cell Phones...Apples and oranges, until the cellphones
don't work, and then Amatuer Radio is a great alternative until the phone
system is restored.

This is a fact, documented since the creation of both the telephone AND
Amateur Radio.

Sorry you disagree.

>I don't think the judgemental types...

Your Putziness, YOU are the posterboy of "judgemental type(s)".

>They've lost the Fun aspect, the
> personal pleasure of communicating in trying to twist this
> Accomplishment into something that it isn't.

Not BEING a licensed Amateur, nor having any investment in it save for a
few dubiously original bylines in a magazine 20 years ago, your basis for

making an INFORMED opinion on this subject is based on...WHAT...?!?!

>In a couple of months from now I'll mark my 50th anniversary of
> first QSY...(SNIP)

Can't even get the "Q" signals correct for Amatuer application. Besides,
"Q" signals are NOT used in MILITARY applications, either...

>The point is to illustrate that HF communications is well known
> and has been since before WW2 to the military and commercial
> world.

Amateur PRACTICE, Lennie...This forum is about AMATEUR RADIO, not 1950's
era military communications nor how you percieve it OUGHT to be from your
alleged profesional career.

>Where Roll and other self-renowned 1x2s fall off the truck is in
> their terrible insistence that the regulations that they had to
> meet in their early amateur time MUST remain intact for all
> time and that regulations MUST revert to that even after being
> changed.

No, Lennie, Larry, myself and others HAVE insisted that others adhere to
PRESENT regulations...Like taking the PRESENT test.

Something YOU said you were going to do two years ago and have yet to do.
Something you LIED about, obviously.

>The terrible insistence to keep the Code Test is a result of
> many things, predominant being that the PCTAs passed their
> test and feel oh, so superior because of it.

Actually it's because the United States is signatory to a treaty that
requires it, and since the United States makes a point of being proper about
it's treaties, I'd prefer that we NOT unilaterally ignore ANY treaty we sign,
whether it's about missles or Ham Radio.

Summation...Another "Amateur Radio is not real radio" rant by a miserable
little old man who has nothing better to do with his life...A miserable old man
who would rather sit on the sidelines cursing the team for not making the goal
ather than get out there an play the game himself.

A loser....

G'nite, Lennie.

IIRC the ITU ran out of two character country prefixes and went to three
character prefixes.

>Do you think anyone will kick the USA out of ITU if W0EX were issued the
>vanity call N0DICK?

In that case, of course not. <ggg>

But seriously, the folks that I knew in the FCC's Treaty Branch (and
their successors) respected the rules and were not about to do such
things on their own. If I could have stood living in Washington
D.C. on a permanent basis (I had lived there when I worked at the
Naval Research Lab in the '50s) I would have gone into that Branch
because liaison with the ITU was what I was experienced in and did
when I was working at the Israeli Ministry of Communications in the
'60s. Instead I went into Field Enforcement and the rest is history.

I will never forget the look on the faces of two defendants who
were appearing in a Rule 20 (sentencing) hearing bnefore a case
that I was handling was heard. They had been convicted of failure
to report income and and pay Federal income tax. They were a
middle-aged couple with obvious education and means who decidied
that they were going to use one of the popular schemes to "beat
the IRS". When the Judge stripped them of all their assets and
sentenced them to incarceration, all they could do was to hold
hands and cry silently.

I've handled enough seizure and forfeiture cases to know that the
folks who sing loudly about their rights and the Founding Fathers
don't sing the same song when the handcuffs go "click" or when the
steel door goes "clang".

...then why can't you answer it?

Roll's original posting repeated his continual castigation of
newcomers "who were supposed to flood the airwaves and
advance the state of the amateur art through their expertise."
That was an unsupported, bogus supposition...and was
repeated many times by Roll in here, perhaps in hopes that
some would believe it if told often enough.

Try to work within the framework of the subject thread and
flow rather than making null commentary.

>>Do we garner a modicum of respect from the elder hams because we've showed
>>our willingness to learn enough about amateur radio to pass the entry level
>>exam,
>
>From most "elder hams", the answer is a resounding YES. Hasn't that been your
>experience so far, Jackie?

In this newsgroup that is so much Nonsense and the
"respect" has only been extant on the condition of
honor-respect-worship of the "elder hams" (i.e., long-
timers, especially those with 1x2 calls). Those who
quote the PC Credo are "accepted" by the self-
renowned 1x2s, all others "rejected" and usually villified.

>Which is why there are several license classes and corresponding tests.
>Permits
>newcomers to get started with the basics, then progress to more advanced
>stuff
>at their own pace. Been that way for decades. Not a bad system, either.

It may be a "nice system" if amateur radio was a craft,
guild, union, or other pecuniary activity. It isn't a pecuniary
activity. That's why it is called "amateur" to distinguish it

from "professional."

Many classes along with rank-status-privilege has created
the class distinction in the amateur radio hobby...and the
quaint notion that amateurs are somehow "superior" to the
professionals.

>>Then again... the hams I've talked to on the air are very different from
>>some of those that post to this forum. So far, on the air, I've experienced
>>nothing of the kind of treatment that is being implied here. I have talked
>>with amateurs who hold Advanced, General and Extra licenses, and they are
>>all quite helpful.
>
>That kinda says it all, doesn't it?

"That" is the Politically Correct phrasing as espoused by
the "my ham radio is okay as it is" group of status
quo-ists. Morsemanship above all else with the secondary
of "real hams" are those who work DX on HF with CW.

>Also consider how few people actually post here with any regularity, even
>though rrap is wide open to anyone with the appropriate access.

"Posting" is no indicator. There is NO way that Miccolis
can actually know the true number of those accessing
the newsgroup and just reading.

>Well said! But you'd be amazed how many times what I do as a ham has been the
>subject of ridicule and put-downs here. Only here, too.

Poor baby...is "what you do as a ham" consisting of
innumerable postings allegedly "correcting" others'
"mistakes" for having viewpoints opposite to Miccolis'?

>The simple fact is that the folks who are attracted to ham radio are, and
>have
>always been, mostly those who are interested in radio for its own sake.

Absolutely not according to some of Da Bosses in here.
One MUST be granted a license if there is the slightest
amount of "interest" in radio.

>Whether
>that interest was technical, operational, or just wanting to talk to somebody
>via radio. Licenses and tests for them exist to keep order and promote the
>general structure of the service. All the rest is details.

"Keeping order" in US civil radio is the lawful task of the FCC.

A radio operator license in the USA is just a grant from the
FCC giving permission to transmit RF energy according to
regulations stated by the FCC. The FCC does NOT "promote
the general structure of the (radio) service." It just sets down
the regulations.

The "keeping order" part seems to have been usurped by the self-renowned 1x2s into forcing some traditional politcally-correct fraternalism about the "one true way" in amateur radio...oddly enough mirroring the sayings of ARRL for years. It cannot be a hobby, it is some mystical "service" to all.

Good grief, get a grip...amateur radio is basically a HOBBY, not some LOTR fantasy of a "service" in this new millennium. It might have been so in the 1930s...but that vanished long ago.

Just what in the world is all this nonsense about "showing dedication" for amateurism by continually mirroring what was a mythical credo long ago? Who established their "qualifications" as Those Who Would Judge Dedication?

Morsemanship? Pasteboard collections on the walls? Anal-retentive arguments for strict obediance to standards and practices of the 1930s? Long tenure as a licensee? Or All Of The Above because "you know what is 'good' for amateur radio?"

>See you on the air!

Slow-scan or fast-scan ATV? Be careful that your shiny hambadge doesn't bloom the image orthicon...don't show a bad image "for the good of the Service."

Merry Christmas, Ghost of Christmas Past...

Ayup, I've spent a lotta time DXing the high end of the AM BC band, it
was one of the pastimes which led me into ham radio back when we rode
dinosaurs to get to the FCC office to take the code tests. There are
hams with well over 100 confirmed on 160, the DX is out there in that
freq range but ya really gotta dig for it. Good stuff.

I haven't spent much time DXing the FM band but it's surprising what
ya can hear. I've used my Yamaha stereo rcvr and my Yaesu FRG-9600
rcvr but I've never have had a decent FM antenna & rotator.

===(begin quote)===
Glen Baxter, K1MAN, has scored a major public relations coup for his high frequency bulletin service. Baxter has managed to get the man known as the nations most trusted voice in America to record identification breaks for his International Amateur Radio Network bulletin service. And according to Baxter, famed CBS anchorman Walter Cronkite endorses the work of Baxters groups:

"Walter Cronkite, KB2GSD, keeps informed about Amateur Radio events by listening to the International Amateur Radio Network and supports ARRS, the American Amateur Radio Association, Walter:" Baxter

"You are listening to the International Amateur Radio Network. This is K1MAN." Cronkite

For those not aware, Walter Cronkite holds a Novice class license and the call sign KB2GSD. Why he chose to record for K1MAN is not clear.

What is apparent is that this is a major public relations victory for Glenn Baxter and one that his detractors will have a hard time brushing off as trivial. Cronkite has been quoted many times as saying he never lends his name or his voice to anything that he does not fully support.

Didn't you hear? Amazon.com "went bankrupt" a long time
ago! We were all told that in this very newsgroup... :-)

They already deal with two Federal administrations, the FCC and
the US government users, via the State Department proxy, often with
unhappy results.

For example, this time the FCC really, really did its best to do
the right thing and get the new 3G mobile phone band (unlike the
cellular and PCS bands) aligned with the rest of the world, but while
no actual use of the band in question could be detected by measurement,
the DoD said the radar (or whatever) equipment they had which could
operate in that band might be interfered with by the mobile phones and
declined to either move their equipment elsewhere or permit the mobile
phones to coexist.

Since most wars are fought outside the country one wonders whether,
when the DoD finds they have a real use for the equipment, they'll be
asking the enemy to please turn their mobile phones off before they
arrive.

You may mean Molson Brador. In Canada most people I knew who drank that
didn't do so for pleasure, it was reserved for occasions when you just wanted
to get really drunk.

No, I was asking seriously - very few law schools teach anything in
communications law - mine didn't (San Francisco Law School) but 28
years on the FCC enforcement staff and lots of Federal Communications
Bar Association seminars taught me a great deal to the point where I
now co-present an annual seminar in the field. Right now I'm the
regulatory counsel to a major microwave consulting engineering firm.

>It strikes me as being a possibly interesting legal research project,
>and that's all. I will look at Bettridge and Brown, thanks for the leads.

If you have access to the older West's Federal Practice Digests,
look at the cases under 47 USC s 301. Most of the annotated codes
don't go back that far, and I agree that Westlaw/Lexis is not for
the casual browser which is why I still go to "the books".

There have been lots of attenpts to invoke "intra-state immunity"
but none were ever successful. The nearest that ever happened was
an early cell-phone jurisdiction case where the California PUC got
the Court to agree that they could have jurisdiction over rates and
service conditions, but the FCC retained jurisdiction over who was
permitted to erect radio facilities and where, and offer service.

>I get the impression that every passing comment is taken as "loaded" around
>these newsgroups.

I post in the rec.radio.amateur.policy newsgroup which, although
"loaded", is far less "loaded" than the other groups to which this
thread was cross-posted. Being composed mainly of licensees, we
do know where the jurisdiction lies.

The rest is all chain-pulling.

The confusion and misinformation in this thread have gone on too long. Too much incorrect information is being posted by so called "experts." I hold 24 Ph.D. degrees in 116 different subject specialties.
Four of the Ph.D's were earned before I was 14 years old. I sit on the board of 46 major corporations, simultaneously. I worked in the special all information commission of the government for 28 years. Have practical experience in 17 specialized industrial, commerce, and international politics areas. Thank you for calling me here to help out in this thread. I will now answer questions and comment on matters at hand and what's been going on here. You may call me "Ken."

Yup, I haven't posted there for a while though. I'm new to
all-grain, having done my first batch a while back, then getting away
from the hobby for while. I seem to do that in a hobby - taking what I
learn then sitting back for a bit before I get involved again. This
thread is getting me thinking I'm ready.. As soon as the cold weather
breaks, I think I'm going to do another batch.

In actuality they have no problem in that there is only one "official" delegation to the ITU, headed up by a State Department appointee with ambassadorial rank. The IFRB does recognize the two contact addresses for registration and interference-resolution matters, but the one delegation still speaks for the member nation.

I'm not too sure that the Convention permits political subdivisions of nations to become members, and from my experience dealing with the ITU on a daily basis a while back (mostly the IFRB), I got the strong feeling that they want to deal with nations, not political subdivisions of nations.

Oh yes, we have found this type of station to be very practical. We encourage their establishment. I earned my 4th Ph. D. in Macro and International micro economics, and we found this type of operation to contribute in a bull market of the mid-macro international trade economy. I sit on the board of only 28 corporations now, but we still promote this. I also found my 29 years with the All Information Agency of the government provided me with the practical experience to dedicate this type of round rexis establishment. But don't get me started <ggg> on the Ervin Slam operations.

Using Baxter's mindset, what if ALL of us were to decide to each select a frequency, make announcements that we were going to be broadcasting a bulletin in three minus one, etc. Then we do what Baxter is doing...we proceed to make one-way transmissions and call them "broadcasts"? Gee, guys. Following Baxter's logic each and every one of us could pick a frequency between ten and 160 and do what Glenn is doing no matter who is on the frequency or how long they have been there. If Baxter can do it, why not the

rest of us?
This is, of course, just a theoretical query but just the same...what if?

What if, for instance, someone else would like to offer a bulletin service on 14.275 and what it they were to begin the service ten minutes before Baxters? Poor old Baxter has his shorts tied in enough knots as it is and the controversy is obviously getting to him. Baxter's "announcements" are fast becoming personal attacks on other Hams and as such he is cheapening himself even further.

Insofar as Baxter allegedly filing charges against other Hams I say "Bunk". If Baxter is stupid enough to even attempt same, and I doubt he has the money or the testosterone, then Baxter is wide open for countersuits for frivolous lawsuits. If Baxter has indeed filed such lawsuits I challenge him to submit the lawyer's name and the case number from the Court in which he filed .
I think you will all agree that Baxter filed no such suits and I challenge him to post proof or shut the Hell up.

Baxter has no credibilty as evidenced by a letter to him from a U.S. attorney informing him that his unauthorized "warnings" of felony violations to other Hams was illegal.
Glenn Baxter is, in short, a sham. They guy is a fraud, a liar, and a charlatan. And those are his GOOD points.

Hey, Glenn. You reading this? I just slapped you in the face and dropped the glove. Maybe you should file charges against me, too. Want to duel?

4156. TIT Revisited

You don't suppose that TIT is overweight for her age and height, do you? I kind of envision her as a stately matron with greying hair and hips not unlike Oprah Winfrey.
TIT seems to take no small amount of smug pleasure in irritating others and perhaps I am reading between her lines, but I get the distinct impression that she/he enjoys being an irritant.
That is all well and good as her genetic makeup predetermined her wide hips and wrinkles. It happens to the best of us. Her condescending attitude is, however, a learned trait born of a false sense of superiority. She/He could do well by looking in the mirror every morning and taking stock of reality. If the mirror is not wide enough, well, so be it.

Speaking as Europeans, we don't want membership of your "SBE". We have had dealings with various American broadcast companies for many years, and have seen a continual decline in technical standards and abilities in most of the engineering staff, even amongst members of the SBE.

In the UK we have various "professional" organisations, just as you do - membership is seldom any kind of recommendation.

I got the WLP007 going last night, its perking along nicely. Today I
brew my 2nd all-grain batch ever. I've been doing extract with
mini-mashes for the past year, after a long inactive period. I
started brewing with the help of Ed Swingle back in the early 80's.
The military pushed us our separate ways.

The nice thing about a beer this dark is it will be hard to screw up.

Take a look folks, an excellent example of the drivel liberals are
teaching kids out on the left coast in the Socialist Republic of
California's government schools. Meanwhile, one of their left wing
heroes, Bill Clinton, spews out, "...that depends on what the meaning of
is is." Brings to mind a case I was once on. When the judge was
asked if a certain amendment to the Constitution was still valid, his
honor, who had three tours of combat duty in Korea and Viet Nam,
said, "Son, when you know for certain a Constitutional Convention was
convened and said action was lawfully taken at said convention, call
me, because I don't want to live in this country anymore."

Case closed, AR dit dit

Lloyd

Uh huh...right.

>Many classes along with rank-status-privilege has created
> the class distinction in the amateur radio hobby...and the
> quaint notion that amateurs are somehow "superior" to the
> professionals.

Under LENNIE'S system, we would revert to a Marxist-Socialist "one size fit's all" license. Stifle the incentive to learn, and learning stops. This will fit Lennie well then he can cast his own form of Stalinistic fervor over the now-unlearned masses.

Nice guy.

>"That" is the Politically Correct phrasing as espoused by
> the "my ham radio is okay as it is" group of status
> quo-ists.

None of whom is in this NG, that I know of. Lennie insists that these "do-nothings" are here, but that's an obfuscation designed only to elevate himself.

So far LENNIE is the only do-nothing here. He doesn't participate in Amateur activites, he doesn't support Amateur Radio, and he doesn't participate in the licensing program by GETTING one.

Very impressive. Astronauts, news anchors, politicians and "common" men, women and children can do it, but it is above Lennie's station to do so.

What a creep.

>>Also consider how few people actually post here with any regularity, even

You mean correcting YOUR numerous lies and deceit?

>>The simple fact is that the folks who are attracted to ham radio are, and
>>have
>>always been, mostly those who are interested in radio for its own sake.
>
> Absolutely not according to some of Da Bosses in here.
> One MUST be granted a license if there is the slightest
> amount of "interest" in radio.

No...What has been said is that those who seek to change Amateur Radio
should have some vested interest in it's future. Those who participate in
other venues of the radiocommunications hobby that do not require a license and
do not wish to participate in Amateur Radio are not the subject of that
suggestion.

You take a proactive role in suggesting what is or is not appropriate for
Amateur Radio. You do not participate in Amateur Radio activities, are not
licensed in Amateur Radio, and no regulatroy chanes made based upon your
sugggestions would impact you.

You remind me of people who are "registered" to vote in a given precinct
who do not live there, yet vote to enact taxes to which they will not be
subjected.

>The "keeping order" part seems to have been usurped by the

Whew...more flailing about which he knows little or nothing.

>Good grief, get a grip...amateur radio is basically a HOBBY,
> not some LOTR fantasy of a "service" in this new millennium.
> It might have been so in the 1930s...but that vanished long

> ago.

Oh?

The American Red Cross doesn't seem to think so.

Neither does the Savation Army, The Federal Emergency Management Agency or a whole host of other State, Federal and Local agencies that annually renew MOU's (Memorandum of Understanding) with the American Radio Relay League.

Guess they haven't been reading your rhetoric, Lennie.

>Just what in the world is all this nonsense about "showing
> dedication" for amateurism by continually mirroring what
> was a mythical credo long ago? Who established their
> "qualifications" as Those Who Would Judge Dedication?

And who are you to assert that any such thing exists? From what INFORMED participation in the Amateur Radio Service do you form such a vile and confrontational opinion?

>Morsemanship? Pasteboard collections on the walls?
> Anal-retentive arguments for strict obediance to standards
> and practices of the 1930s?

YOU are the ONLY person who refers to anything related to teh 1930's, Your Cowardliness. ONLY you.

>Merry Christmas, Ghost of Christmas Past.

And here's hopes for your quick cranialrectumectomy, Lennie.

What a lying, deceitful Putz.

Ok if you are taking nothing else it reminds me of when I was on the
Board of Viagra which was part of the Israel Ministry of Communications.
That was after I worked 27 years and gained practical Viagra
experience with the All Information Commission of the U.S. government.
One of the commissioners in Israel was a friend I played golf with once
a week at an exclusive country club where we would discuss the The
Steps to Becoming a Self Proclaimed Expert in r.r.a.p. I coached his
son on how to earn 17 Ph. D. degrees. Don't take much of what
you hear here as fact, unless I pontificate on it, as I am a legend in my
own mind.

That must've been it. A group of friends and I (friends who'd been there before--I had not) took an afternoon roadtrip up to Montreal. While there, the only thing they bought was "Badoor" (probably Brador)--and I think they bought four bottles. That evening, back in Plattsburgh, NY on campus, I drank probably about or a little over a half bottle. It must be potent stuff...though I really don't remember what it tasted like (I didn't much care for the taste of beer back then, so they all tasted bad anyway).

There's an ale that used to be available down here in Texas...called Mickey's? I think. Anyway, came in a big mouth green bottle. Couple of those (yucky tasting, for sure) at a drive-in movie and you'd laugh at any Grade B comedy. Back up in NY, there was (Jim/N2EY, is there still?) an ale from Genessee, think it was called Genessee 10-horse ale or something like that. When I was visiting one time, it had only been on the market a short time. This stuff actually tasted pretty good, and it would kick butt, too.

I am no beer conosseiur. I've never really found one I like. I really don't like alcohol that much at all. However, I've recently been introduced to a drink called a Sour Apple Martini. Wow, I like 'dat!! But, I'll only drink one--I'd hate to get drunk on a drink like that.

It is a strong beer, at least to me it was. And, crummy? Well, aren't all
beers crummy (ducking).

Seriously, I've seen a couple of posts on brewing beer and that chocolate
beer sounded cool...maybe someday.

Another thing that would be interesting is to find out where the idea that this is a criminal charge anyway. A criminal charge can only be brought by the state or the governing authorities. However, he may bring a civil suit against various characters. Crininal charges are only brought by the appropriate governing authortiies such as the U.S. Department of Justice in coordination with a U.S. Attorney or through various state authorities. Therefore, despite Lloyds attempts at blowing off his mouth, there is a major difference between criminal law and civil suits being that government brings about criminal charges while individuals bring about civil charges. Of course, the all knowing Lloyd/ft-847 man etc. is all knowing and all seeing

And not that I expect you to tell the truth, but what is your
military background?

And who is the character in this thread who claims he served
in the military forces of Israel, even worked for one of their
"ministries" Minisistry of Communications or other such nonsense.
Then he turns around and claims he was in the U.S. military where
he held all sorts of high security clearances, even more nonsense,
says he held higher security clearances as a civilian government
contractor. Was on the President's staff, commanded a submarine
and an Air Force base. Wake up Sheeple! Get informed! These
liberal big government bullshitters are just that, bullshitters. Making it
up
as they go along. No one, repeat, no one can hold a U.S. Government
security clearance, after having had extensive service and allegiance to a
foreign government. There are rare exceptions, but they don't apply to
any of the liberal big government bureaucratic bullshitters you encounter
around here.

It is amazing so many sheep here do not even bother to study for themselves
and accept what they hear without even bothering to at least check it out
for themselves.
I can tell you do not even kow what a military is. Study before you put your
foot in your mouth again.

Fort, Irwin, CA This place is dedicated to desert training.
http://www.irwin.army.mil/
Twentynine Palms, CA
Fort Bragg, NC
Fort Sill, OK
Fort Lewis, WA
Fort Hood, TX

Heck to save time...
here is a link for all army Forts in this country

http://www.army.mil/installations/forts.htm

And to save even more time, here is the DOD website and you can find out
every military installion in the world.

http://www.defenselink.mil/

Ah, thanks for straightening me out on that bit of military intelligence.

Because the band will be full of cell phones in the countries in which
they'll be fighting wars, they just can't have any cell phones in the band
in the country in which they'll be training for those wars. Makes perfect
sense, I should have seen that.

Thanks,
Dennis Ferguson

Tough love is only effective if the person has no other options
available to them. "Tough Love" a newcomer ham and he'll
just abandon it and take up some other hobby. It's not like
"Stay off drugs or it's jail".

You probably had the complete set of documentation for that
equipment. The military usually insists on full docs for the
stuff they procure. I had to write stuff like that when I worked
in the defense industry.

The reference was to some mil. radar frequencies...

And to Lloyd..

I don't see much, if any, difference between the liberal bullshitters and the conservative ones. Every one of them talks out both sides of their mouth, and all either of them want is your $$$. Only difference being that the liberals want it for big government and the conservatives want it for big business. Either way, it's yours, and they want it.

Gimmeee a break, I've spent 10-12 years of my engineering career
directly involved with the U.S. military, all three branches in fact
from Basic at Dix & Belvoir to being a direct DoD employee to doing
contract R&D work. I've been on more military bases and on more Navy
ships than I can even start to recollect.

This is a HAM RADIO dot POLICY newsgroup. You and your inane posts have nothing to do with either. Go back to whatever dot rant NG you fell out of.

ROFL! Still, the last time I recall seeing an Al Gore caravan, I
believe they were all driving Ford Expedition SUVs, not Volvos.

Al likes SUVs for himself, preferably the largest available (although
I haven't yet seen him in a Hummer), but mini-Japmobiles for peasants
like the rest of us.

Thank God that Al Gore is now part of our national history. My
greatest fear is like Frankenstein's Monster, someday a lunatic
politico could revive him to a semblance of life. :-)

Harry C.

p.s. Al Gore was really funny on Saturday Night Live, largely because
most of the viewers know who he is and what he stands for. Were he not
a well known political figure however, he would have come across as
just another untalented dork! Think about it and see if you don't
agree.

Every embassy has ten, twenty, thirty or more copies of the U.S. Department of State phone book listing the numbers for officials in Washington and elsewhere in the United States along with telephone numbers (including STU-III and classified FAX lines) for every embassy and consulate in the world. These books are routinely issued to Foreign Service Nationals.

I based my comment on your statement:

"I've won two cases in court by myself. There's no movie of
them, though--there's no movie of a lot of great
folks who think outside the box."

What is one who reads it to think, Kim? To me it says that you view yourself as a great person who "thinks outside the box", whatever that is.

Genessee Cream Ale (usually known as "Genny Cream" was my hands-down favoirte up there. Went perfect with red hots/white hots, beef on a weck or (sigh) wings. Makes me homesick for up there just to think of it. (Can one be homesick for a place that was "home" for less than 3 years?)

Next time you're in downtown Rochester, don't miss Dinosaur Barbecue. In the old LVRR passenger station, built 1904. Real barbecue in an extremely unlikely place.

Yeah... I just do not drink as much anymore..... I may go through a 5th of Baileys during the Xmas season, but I still have a few shots worth left of the last 5th of Cuervo I bought last January. Went through a whole case of beer within the last twelve months too! I just don't like waking up the next morning and trying to figure out what the hell I did the night before. On a good note, it is a hell of a lot cheaper to be a "lightwieght" when it comes to drinking! :)

Happy Holidays!

Don't surprise me a bit you supporting trash like MAN. You being a professional pirate radio operator and all. You know...birds of a feather...eh Orfis?

And no I don't qrm anyone. Why bother....people like you have enough qrmers to jump on them.

Makes for interesting listening tho.

Orfis hope your family has a fine Christmas. But for you thats another subject.

Jim Hampton wrote:

And another CBer adds his/her comments. Myself, I'm happy with 2 meters and 440 FM although my license allows more. Australia - all rf path - has been no problem. Had a chat with friends in British Columbia today (although this was supported, in part, by internet linking). Who cares? I haven't received qrm in quite some time (like ... um ... 35 years). Life is too short to live with your panties tied up in knots. HF is best experienced with digital modes. The lids haven't gravitated there yet. The repeater? Well, we had a couple of problems. Only two. Neither lasted for more than a couple of minutes (in any case, I didn't suffer - the one guy had to suffer 40 words per minute CW from me, however ;) The other had the rug pulled out from under him. For every frequency with a problem (allowing 3 KHz bandwidth) there are thousands without problems (and that would be HF plus, perhaps, 6 meters - a lot more if you allow those frequencies above 6). If you enjoy listening to problems, go ahead but don't complain. If you don't, QSY. End problem. I think I'll see if Bill, VE7DTM, is back on the air.

Looks like recent events by k1man have not
helped things that much. In fact it seems

to have taken the channel down Cuckoo's Nest Lane.
[perhaps it was there all along?]
14.275 all afternoon.has been a 3-ring circus.
While Maine is transmitting with peanut-butter in ears,
there were ten stations talking over him all at once. This
was accompanied by various potty-mouth and generally
retarded commentary, broccoli fart noises, ginger ale
gaseous-grade belching, SpongeBob Squarepants .wav's,
some guy playing a "mouth organ" (that's a harmonica
for the uneducated) taped music, a kid making "goo-goo
baby" noises (95% probability "goo-goo baby" tape is transmitted
from the Flushing NY area) some old farts talking about
how to make potato soup, the F-word sent in CW over
and over, and a perennial station down South who's
chastising everyone who's talking over Maine's Broadcast.
You want it, they got it and a everything in between folks, it sounds
like the old 14.313 War all over again. Amazing that
grown men an act like this, sounds like a bunch of 8 year
olds in a sandbox that just found out the stray cats been using it
as their litter box at night! All in all a quite an amusing time on the
ham ray-deeoh. Makes me comfortable in the knowledge that ham radio
is still the best screwball magnet we have going. Looks like
14.313 is baaaaaack my SWL's !! (sound of toilet flushing)

Merry XXX-mas (from Suzie da "kiebassa queen")
Happy Hanukkah bush (you all messhuga!)
Happy Quanzaa (KFC & Wateymelon from Trent Lott to all)

Brian:

Gee, that was fairly reasonable advice, coming from you! However, I've
been tracking my WAS/DXCC progress in my QSL card file, so I've got
a pretty good idea of where I am. Only 7 states short as of this time
from my present location. My log says I've got DXCC knocked, but I
don't have all the cards yet. I don't do e-Qsl's.

Jim:

My absolutely free advice: Get rid of the traps and use an "all-band"
dipole fed with ladder line (preferably the "real" homebrewed ladder line).
They work better and the SWR is always good because you are using
an antenna tuner to stuff the RF into the wire.

Jackie:

Build the dipole first. They don't get much simpler, and few work any better! Do yourself a favor and invest in The ARRL Antenna Book. It will answer all your questions about antennas, and give you enough ideas to keep you busy for a long time to come!

Greetings,

This message is to announce that I am running for public office in Orange County, California. I am running for Orange County Supervisor (3rd District) to be held this January 28th., 2003. As a ham radio operator, I will help to assist hams in my area regarding public policy involving Amateur Radio.

Thank you for your support!

If you're pissed off, Larry, why would I have a problem with that? A) If
you're pissed off at me--like I care; B) if you're pissed off at something I
posted--like I care; and C) if you're just generally pissed off--like I
care.

So, stay pissed off if you'd like. You do seem to like being pissed off. I
do not.

Yep, its getting those cards that's harder than working the countries.

drove down to Davidson county yesterday. Found one
station in FM broadcast band who would only ID using
"DV-97" monitored several hours, never heard him use any
other call but that. Weak sig compared to other stations in
band. Sig was stronger in east & north part of
city-county. much political talk, little entertainment. Anyone
else hearing him? sig unstable at times.

"Complete?" :-) From pre-WW2 designed tube transmitters?

The BC-339 1 KW transmitter dated from around 1938 or so
even if Lewyt Vacuum Cleaner Co. made most of them during
WW2. The same with the BC-340 10 KW power amplifier
(driven by a BC-339). The Press Wireless PW-15 (15 KW)
was commercial grade, another pre-WW2 design. The only
other "new" transmitter was the Western Electric LD-T2,
designed after WW2, preset-tuned to 10 frequencies so that
a QSY required only a push-button selection to get the servo-
motors going to reach the preset positions. The pre-WW2
SSB transmitter, a Western Electric thing from around 1935,
was the only cranky transmitter to QSY. Despite their age
and oldness, all the transmitters went a year or more before
needing any maintenance, even if running 24/7.

There was liternally NO smarts needed to operate any of the
transmitters...the same as it is now, a half century later. All
got on-the-job training by being shown how to do it. Those on
maintenance would sometimes need to look at schematics
to replace a part or whatever...schematics from pre-1940
format. NONE of that equipment was taught in Signal School
at Fort Monmouth. The closest to that was field radio taught
at Gordon, principally on the ancient BC-610 and an FSK
exciter that was part of the AN/GRC-26.

Signal Depots handled the extensive repair jobs, those limited
to overhauling the one-ton power transformers for the BC-340,
filled with PCB oil I might add. :-)

For the six-rack, 360+ tube microwave radio relay terminals, all the microwave MOS types got a 10-day "school" run by two General Electric tech reps using one of the first of the FRC-23s installed in Honshu. The "manual" was a stock GE commercial tome and I really don't know if any "official military manual" was ever written up on it. We all (in two battalions) got to glue on "official" labels on each rack cabinet to designate it as part of the "AN/FRC-23." :-)

As to documentation, the familiar military style for all military electronics manuals was firmly set after WW2, not before, although the Army set the style for all branches during WW2. Anyone can see that from perusing the "boat anchor" manuals available several places. I'll recommend downloading the manuals for the T-195/GRC-19 from August Johnson's website (www.kg7bz.com) for anyone wanting to know the guts of an HF tube transmitter and How It Works...originally written some time around 1953, probably at Collins Radio, the designer.

Yes, I'm familiar with military documentation. As the only designer for the AN/ASM-416 (made by RCA), I had to not only look over the tech writer's shoulder while he was writing it but also explain the draft to the visiting government type from CENCOM (Monmouth), sometime around 1973.

Membership in professional clubs has never inferred professional
competence or confirmed a certain education level. However, said
membership often serves to provide the members with an ego boost.
Some of the best engineers I ever employed were neither members of
any professional clubs nor had any interest in them.

> an antenna tuner to stuff the RF into the wire.

OK, here's a challenge for ya, Larry:

The trap dipole is mounted with the feedpoint/apex at 35 feet and the ends at an average of 15 feet. Traps are resonant at 7.05 MHz and have Q of 150 on 3.5 MHz. Equivalent L of each trap is 13 uH. Overall length of antenna is about 106 feet. Feed is 40 feet of RG-8X. No balun or tuner is used on the two design bands (80 and 40 CW, of course) because the SWR is under 2:1 over the CW parts of those bands. On 20 and 15, a homebrew tuner is used because the SWR is a little high.

Compare that setup to a similar no-trap antenna with ladder line and tuner. Be sure to include losses due to high SWR on the ladder line. Calculate the feedpoint Z at the shack end of 40 feet of the ladder line and describe a tuner and balun arrangement that will handle the complex impedances presented. Also calculate losses of same.

The feedpoint of this antenna is held aloft by metal TV mast held by a wall mount. Said mast is grounded with #6 solid wire for lightning protection. The coax simply drops from the feedpoint down the side of the house to the basement window, and is unaffected by the ground wire or metal mast. Antenna can be raised or lowered from the ground by means of a halyard arranegment.

Describe a mechanical support for the ladder line to keep it away from the mast on windy days, yet allow lowering the antenna without dragging out the big ladder each time.

Also describe how many more QSOs/sections will result in next CW SS due to all the work required.

And just what does Limbaugh have to do with ham radio? If K1MAN
does this interview it would prove agaiin he is just broadcasting
a talk program and is of no service to amateur radio.

I served as Third District Nevada County (CA) Supervisor for two terms -- 85 to 93. I hope you do well.

A story for your amusement as to how politicians should conduct themselves:

I went down a street and saw a red light burning on a front porch. I went inside and found a choice of two doors, "Over 40" and "Under 40". Being an honest type, I went through the "Over 40" door and found another two doors. One said "Over 8 inches" and the other one said "Under 8 inches". Again, being the honest type, I chose the "Under..." door. Again two doors, "Once an night" and "All night long". Honesty made me go with "Once...", whereupon I found myself back out on the street.

The point? Be honest, tell the truth, and you'll never get screwed.

{;-)

I don't know, Dan. Yesterday VE7WNE, Wayne, said he may be mowing his lawn on Christmas (!) ... For some funny reason, whenever someone tells me what is good for this country (or whatever ... fill in the blank), it is usually good for the person telling me what to do (not for me, however). Some idiot a couple of years back was suggesting that the answer to high energy costs in my area was conservation. He and his neighbors all had heat pumps. Yep, he was in Fairport - a municipal utility that buys all cheap hydroelectric and he was paying about 3 1/2 cents per kilowatt hour. When it gets much below 40 degrees, heat pumps are just about worthless and the back up (electric heat) takes over. If he had to pay what I do (12 to 15 cents per kilowatt hour), I'd guarantee he'd switch to natural gas - but, of course, he knew how to solve everyone else's problems ;) The Rush Limbaughs of this world simply spout what is good for them. We had an interesting letter to the editor last week in the newspaper. It was from a gentleman who works in our local school system. Our schools are facing huge deficits. Seems a lot of business donate old computers. Yep, take a write off. Problem is, some of these old clunkers are 386 processors or even older. They have to be junked by the school at a cost of $17.00 each. Nice country. Big business gets a write-off for letting the school district pay to scrap the junk! Better give the CEO another couple million dollar bonus for figuring out that legal loophole.

I know William. He's a man of good character and firm convictions.

Too bad some folks still vote just on the basis of party lines. That's an incredibly stupid thing to do. I'm a registered Republican, but crossed that line many-a-time when the other candidate presented a better platform.

Regardless of what it was or wasn't...I have yet to see Brian Kelly try to make himself look heroic with the memory of soldiers who died when he was no where to be found.

Phil, if you (or anyone else) needs FCC phone numbers, they
are on the FCC website. The US State Department also lists
many embassy and other numbers on their website.

There are many copies of DSN listings for the US government
telephones of both civilian and military agencies on the Internet.
Just do a simple search for "DSN" or "Defense Switched
Network." Be prepared for a lot of hits...

No $3600 annually, just access time fees. :-)

At the Fuchu location. :-) The USAF took over all the HF comm
tape relay, microwave from the US Army in 1963, the Army down-
sizing its forces in Japan beginning that year. The transmitter site
at Kashiwa (CampTomlinson) was downsized compeletly in 1978
when it was turned back to the Japanese SDF. So much for
mongo RF and an airfield full of antennas for HF.

"Fuchu" was in the western part of Tokyo (?). I know a USAF
type who knows that better, he having been at Camp Tomlinson
'64-'67. I'll give you his website in private e-mail...

Brian:

Pretty cool! In my 20 years as a ham, I've only once used more than "barefoot" power. But that's out of necessity, not choice! Maybe someday I'll be a "big gun," but for now, I'm still having fun with my low-power "peanut whistle" station! Even as an apartment dweller, I put something in my logbook every day -- which is a lot more than I can say for a lot of hams I know that live on acres of property!

I thought so.
>
> No $3600 annually, just access time fees. :-)

The 3600 bucks is for the Rules Service which includes CDs with Folio-searchable and updated-monthly FCC Rules, statutes, and treaties, full case/order/notice texts going back to late December 1946, case digests (case/order/notice summaries sorted by rule or statute section), monthly newsletters (current and archived to November 1994), texts of open NPRMs and NOIs, and the case citator (cross-listing of where a case/order/notice appears cited in a later case/order/notice). These are all tools that a communications attorney needs to do the job right. The phone book and a dictionary of acronyms are freebies with the Rules Service.

Some of these are available on the FCC web site but not all, especially the newsletters and digests which are published and copyrighted by P&F. I don't know whether the FCC web listings are searchable by phrase.

3600 bucks - 300/month - is about what West charges for Westlaw which has state and federal statute and case material but doesn't have the FCC material that P&F has. Practically every law office has Westlaw or its competitor, Lexis.

All it takes is money.

No, Dave. I did not. You may choose and wish to believe I did to satisfy your own ego. But, when it was submitted that someone had heard of a story of some parents "going out on their own" (paraphrasing the post) to find a cure for an incurable disease the medical community had diagnosed their son with, you said, "I don't believe you." I submitted to you the movie title that relays that very story--and that is all I did.

Different direction, indeed.

And the saga of TIT vs. Dave Heil marches inexorably on...fomented, for the most part, by a rotund TIT who simply cannot leave well-enough alone.
Tomorrow is another day, TIT. You would likely be better received were you not wearing a tampon on your sleeve.
You are, if little else, entertaining.

Greetings everyone,

To answer a question on party affiliation... I am a registered Republican. The seat that I am running for is nonpartisan though. Steve (whom I had known for years) is correct that lines have been crossed to favor a better candidate. This is a unique American phenomena that has made our country great.

Thank you Steve for your kind words... :)

Best Wishes,
--
William A. Wetzel

Yes, Kim. You did. The other fellow's diatribe about "homemade
biologists" was itself a misdirection from his own black helicopter
theories. I don't care about the homemade biologists as they aren't
part of what was being discussed.
My four-word dismissal of his crap was just that: a dismissal.

See if you can find someone else interested in discussing movies with
you.

>There's a thought. I kinda like the compact package though.
>
It's not that compact if you have to carry a 20 amp power supply and the tuner as separate items. Plus the 100W option is not compatible with the internal battery.

All depends what you want to do with the rig - portable or home or both.

>> A neat thing about those kits is you can build the basic one and add
>>features
>> as time/money allow.
>
>A sub-$600 starter price for a rig that's right up there with the

Some things it simply doesn't have, like general coverage receive or passband tuning. But it does dig out the weak ones, and push aside the QRM.

Good. That makes two of us.

> However, when you say you
> "don't believe someone" that opens the subject (whatever it is you don't
> believe) for discussion.

Did it open a door for discussion? The other guy's introduction of some
story of homemade biologists was irrelevant. Your introduction of some
movie which you claim offers proof is even less relevant. Your tale of
winning two court cases and telling us that there are no movies made
about a lot of "great folks"
is total fluff.

I offered you evidence--which obviously pissed you
> off... :)

You offered no evidence at all. You offered a non-documentary movie.
You still haven't told us: Do you feel like a sheep being raped of your
rights by your government? Do you embrace the views of a homemade
lawyer over those of a former attorney for the FCC?

Ryan, goals for 2003? Thought you'd never ask.

1. Back to grad school again.
2. Find a new job with a pay raise attached.
3. Do more stuff, like fishing, with the kids.
4. Have enough money in July to take the family on a vacation.

That's just simply choosing to ignore the evidence, Dave--it does not
invalidate it.

I will leave the part of the discussion about sheep up to you. As to my
embracing the thoughts of anyone--it depends upon their point of view,
REGARDLESS of their avocation or profession.

A "based on a true story" movie is not evidence, Kim.

> I will leave the part of the discussion about sheep up to you.

So as usual, you jump in with nothing to add to what's actually being
discussed or debated.

> As to my
> embracing the thoughts of anyone--it depends upon their point of view,
> *REGARDLESS* of their avocation or profession.

Again, you haven't commented at all upon what was being discussed, you
chose to give us a movie review.

What is "goandless" anyway?
You spell just like Roger Wiseman.
Are you him? Is he you?
He always wanted guys to post their callsigns, too.

Then he'd spam them.

It is not cowardly to not post a call...
It is false bravado.

You sure you are not Roger Wiseman?
You spell just like him. Sound like him, too.

What write-off? There is no write off for fully depreciated equipment.
If they tried to deduct the fmv, they will get zip. Plus the contribution
limits carryforward anything big. They are not getting any tax benefit.
Someone was trying to do a nice thing. You should make do with what
you get. Another individual shouldn't make generalizations about stuff
that he no idea.

Yea right, and you made my top 20 list of JERKS also!
Why don't you just go and sell some more of your
business radios set up with MURS radio frequencies to
the truckers. You bitch about the CB radio types then
you go and sell the same guys more illegal radios to
play with. You need to check out this web site that's
there just for jerks like you.

Jim:

I get the pernt. Keep yer steenkin' trap dipole! Sorry I spoke! <BSEG>

However, I would suggest swapping the RG-8X with some nice LMR-400!
Kinda pricey, but very low loss! On HF, even the LMR-240 (same O.D.
as the 8X) would be a big improvement!

Merry Christmas.

From the ARRL website:

Amateur Radio News

In Brief (Dec 24, 2002)

1. Amateur Radio to get holiday exposure via country music broadcast.

Larry's 4-land dream come true.

2. FCC seeks comments on Amateur Radio-related petitions.

Hopefully only amateurs have petitioned their government on amateur related concerns. All others need not apply.

3. German Amateur Radio payload reaches orbit.

4. Ham Radio University 2003 set.

5. Nine-year-old makes Extra.

Probably reads and writes at a higher grade level than Bruce.

6. Rohn founder dies.

7. Spanish-language NCVEC question pools now available on the Web.

?Hoy?

8. World Scout Jamboree to include Amateur Radio activity.

Perhaps a couple dozen 1n34a's will lead a few scouts to a lifetime of amateur radio fun. Perhaps one will become an engineer. Unless Dave has a problem with it.

Did he say "no-clues?" Hoo-boy!

Kim, just tell him, "Merry Christmas," and move on. Or else he might whip out his impressive "military background" on you. I'm still puzzling over that one. Maybe he has a field jacket or something with some old chevrons on it.

There was a good article in the Legionaire, or was it the VFW magazine, about veterans that actively hunt down people who falsely claim to be medal winners, etc, especially the Congressional Medal of Honor. They also exposed people who claimed to be Navy S.E.A.L.s and

weren't.

But you won't see Steve go after him like he has Mark Morgan...

I didn't ask anything for myself.

For K3LT, I asked for an engraved Kent TP-1.
For N2EY, the latest and greatest fully integrated soldering station.
For N0IMD, the return of his lost T5 logs.
For K4YZ, a 24-pack of KIWI boot polish, and 30 days of R&R to fix his sour attitude.
For W5TIT, a sense of humor.
For LHA, a life membership in AFCEA.
For K8MN, a sense of humor.
For N0VFP, a girl friend or a personally autographed picture of K4ZDH.
For WA8ULX, a new CB rig.
For KC0ODY, a "newcomer of the year" plaque.
For W4NTI, a top-10 win in ARRL SS.

For everyone else I forgot, 20 new countries on their DXCC totals.

Here is something a KM9T sent me in an email
and I think it will go over very nicely here.

Merry Christmas to all and thanks to Mike for the poem.

'73' From KB9TMP

"JESUS is the REASON for the SEASON!"

----- Original Message -----

Radio Operator's Night before Christmas...

Twas the night before Christmas,
And all through two-meters,
Not a signal was keying up
Any repeaters.

The antennas reached up
From the tower, quite high,
To catch the weak signals
That bounced from the sky.

The children, Tech-Pluses,
Took their HT's to bed,
And dreamed of the day
They'd be Extras, instead.

Mom put on her headphones,
I plugged in the key,
And we tuned 40 meters
For that rare ZK3.

When the meter was pegged
by a signal with power.
It smoked a small diode,
and, I swear, shook the tower.

Mom yanked off her phones,
And with all she could muster
Logged a spot of the signal
On the DX PacketCluster,

While I ran to the window
And peered up at the sky,
To see what could generate
RF that high.

It was way in the distance,
But the moon made it gleam -
A flying sleigh, with an
Eight element beam,

And a little old driver
who looked slightly mean.
So I thought for a moment,
That it might be Wayne Green.

But no, it was Santa,
The Santa of Hams.
On a mission, this Christmas
To clean up the bands.

He circled the tower,
Then stopped in his track,
And he slid down the coax
Right into the shack.

While Mom and I hid
Behind stacks of CQ,
This Santa of hamming
Knew just what to do.

He cleared off the shack desk
Of paper and parts,
And filled out all my late QSLs
For a start.

He ran copper braid,
Took a steel rod and pounded
It into the earth, till
The station was grounded.

He tightened loose fittings,
Resoldered connections,
Cranked down modulation,
Installed lightning protection.

He neutralized tubes
In my linear amp...
(Never worked right before --
Now it works like a champ).

A new, low-pass filter
Cleaned up the TV.
He corrected the settings
In my TNC.

He repaired the computer
That would not compute,
And he backed up the hard drive
And got it to boot.

Then, he reached really deep
In the bag that he brought,
And he pulled out a big box.
"A new rig?" I thought!

"A new Kenwood? An Icom?
A Yaesu, for me?!"
(If he thought I'd been bad
it might be QRP!)

Yes! The Ultimate Station!
How could I deserve this?
Could it be all those hours
that I worked Public Service?

He hooked it all up
And in record time, quickly
Worked 100 countries,
All down on 160.

I should have been happy,
It was my call he sent.
But the cards and the postage
Will cost two month's rent!

He made final adjustments,
And left a card by the key:
"To Gary, from Santa Claus.
Seventy-Three."

Then he grabbed his HT,
Looked me straight in the eye,
Punched a code on the pad,
And was gone - no good bye.

I ran back to the station,
And the pile-up was big,
But a card from St. Nick
Would be worth my new rig.

Oh, too late, for his final
came over the air.
It was copied all over.
It was heard everywhere.

The Ham's Santa exclaimed
What a ham might expect,
"Merry Christmas to all,
And to all, good DX."

> My Christmas wish is that the FCC sends all you No-Code CBplussers back to
>CB
>where you belong.

Plus(plusser) means more, so how is this an insult?

Those that focus at code at the expense of other aspects help dumb down themselves and Amateur Radio. Code is a waste of time. Those that do not focus on code are more free to focus on the technical aspects. From what I have seen, there is dumbing down in the clubs, and it is accompanied with pro-coders.

Finally, some CBers like to homebrew. Here is a quote from a CBer.

From: piper tweet nospamatthistimethanks@yahoo.com
>A variable capacitor can be made by reverse bias voltage across a diode. As
>you vary the voltage,
>the capacitance changes.
>You can see them in many vfo circuits, nowadays varicap diodes are common
>place.
>
>Super Diode is a slang CB world description for a diode with much larger
>capacitance range over
>a similar (to "normal") varicap diode. The thought would be to replace a
>standard range
>varicap diode in your ssb radio clarifier circuit with the Super Diode.
>
>The range of an example clarifier would extend from the original few kc's
>(KHz) of
>operation up to some much larger value like plus or minus 15 KHz. You would
>be able
>to move into the next frequency "channel" or "hole slot". For the most
>part, only
>receive operation is changed with the clarifier, but mods are often done
>which tie
>both the transmit and receive functions to the clarifier knob.

Seems this CBer is more technical than most Hams at my local clubs. Some CBer's homebrew (or make modifications). Most Hams at my local clubs do not homebrew and even dislike it. This shows that not all CBers are dumb, as some Hams may like to claim.

It is now Christmas.

I'm confused too, Steve. Hans, give an explanation for us
please?

> So, you SUPPORT voting for a person based solely upon party affiliation,
>NOT upon thier qualifications, character or convictions?

There is a thing called Yellow dog Democrats, and second
coming Republicans.

The Yellow dog Democrats would vote for a yellow dog over any
Republican, and the Second Coming Republicans wouldn't fot for a
Democrat if he came down from heaven announced by angels blowing a
trumpet fanfare.

Proud to be an independant, but fascinated that neither party
will allow me to vote in the primaries.

Like what "Hello, is anybody out there?"
But OTOH we are talking about code so
you don't ever have to worry about it!

I will agree with you "somewhat" on the
codewords used in voice comms. It is
kind of silly to "QSY" when we can just
say "I'm switching over to xxx.xxx MHz".

Constructing a 12-pack of 1N34A's is called scouting? 'tis a different
world in which you dwell.

You live in a state of perpetual haze. A DXer can rag chew anytime he
likes. It is just that rag chewing is not DXing. You can sit and talk
fishing with a "G" all afternoon. That's rag chewing at distance. It
isn't DXing. Keep pondering the mysteries, Brian.

I think it'd be neat if you take lots of photos documenting the young fellows constructing that 12-pack of 1N34A's. That'll certainly keep 'em out of trouble and off the streets for a while.

Your post didn't make a lot of sense. If you meant "you are", the proper contraction would be "you're". I don't worry about the code one way or the other - and it doesn't bother me to post my call (heck, I've had 4 different call signs as an extra class since the 60s and had my commercial telegraph ticket too). I just like to see some common sense in folks being licensed. Safety (power and rf), regulations, and knowing the difference between "your" and "you're" would help too ... ;)

OH? And Mike, does posting your call make you look good? As in "macho"?
Good thing that you have never been the victim of a stalker/spammer as has
happened to some users hereabouts.
Posting your call may be bravado to you but it is pure folly otherwise.

Your "challenge" is empty. Note, if you will, that the more intelligent newsgroupers keep their callsigns off the posts...something that I hope you learn to do before it is too late.
Let's see...if some misfit were to go to QRZ and look up your call, well, no telling what kind of spam or junk mail or magazine subscriptions you may get.
I know because it happened to me. I have been down that road. Mike..open your eyes!

Sure thing. Trouble is that most CB'ers make "mods" to illegally operate
outside their bands and do so with illegal power outputs.
This makes you and yours "dumb" from the get-go.
Ten-Four, Good Buddy?

First, there is no law that says you must accept a donation just because someone wants to give it to you. So if the school took them but didn't have a use for them its their own fault.

Second, there are lots of good uses for old 386's. If they work they are excellent platforms for learning basic programming, building into science fair projects, teaching computer testing and repair, etc. heck, i still run 6 of them here for contest logging. If they don't work they can still be used as training props for teaching computer assembly and repair, and the bonus is that you don't care if the students zap them with static or drop a screwdriver in the power supply.

I have used my full name an callsign here for over four years now and have never once gotten any piece of spam that I can attribute to this newsgroup.

I also DID receive several generous donations from members of this NG (a couple I know, a couple I don't) who donated to my (now deceased) daughter's wheelchair fund.

I HAVE, however, gotten spam from chat rooms, magazine subscriptions and "registering" for other sites (ie: AOL, Yahoo, etc)

Simple facts are usually not comprehended well by the simple minded, Mike.

Here you go again with this silly rant about "uneeded codewords".

WHAT "codewords", Vipul?

There are NO "codewords" here. Every "Q" signal and procedural signal used by Amateur Radio operators is internationally understood. In SOME cases it is those very abbreviations that MAKE international communication possible.

Now, you did this rant a few weeks ago about "codewords" and other hobby related slang, and you were asked WHY Amateur Radio should be any different than any other sport, avocation or occupation.

You never answered the question.

Since YOU again raise the rant, I will again ask the question of you directly: WHAT CODEWORDS?

HOW could Amateur Radio change how it refers to Amateur Radio-specific practice in any other terms?

HOW would you implement these changes into a "hobby" that spans almost every country of the globe, hundreds of languages and all 24 time zones?

Steve, K4YZ

On the local repeater, maybe. On 14.195 where the bands are wavering and
the language poorly understood to start with, not a good idea!

No mystery, Dave. You live in a tiny, little, confined world. You
can break those bonds of self-enslavement and enjoy life a little.
Other hams really can be interesting enough to spent 10 or 15 minutes
with. Good luck in the new year.

"Steenkin"? That design has worked for me at two QTH's and several Field Days. Cost me maybe $10, mostly for the coax. Look up my SS and FD results over the past several years.

Have you done better with a similar low-cost antenna?

>Sorry I spoke! <BSEG>

>
>However, I would suggest swapping the RG-8X with some nice LMR-400!
>Kinda pricey, but very low loss! On HF, even the LMR-240 (same O.D.
>as the 8X) would be a big improvement!

How much less loss (in dB) will those coaxes have on 80, 40 and 20 meters, assuming a line length of 40 feet and SWR of 3:1 or less, compared to good quality (not RS) RG-8X? How much more weight on the antenna support?

Yes, very different from your world, Dave. I am a leader. I freely
give my time to help keep these boys pointed in the right direction.
They learn about many things in scouting, and 1n34a are just a part of
it. They'll learn what they can do, and they'll learn what a 1n34a
can do. If you're interested in changing the curriculum, you'll have
to get involved yourself.

But it might take you away from those out of band Frenchmen.

"Vshah101" <vshah101@aol.com> wrote

: I would go in the opposite direction. Remove the CQ. How about just using
: ordinary conversation instead of unneeded codewords?

You're right that "Codewords" as you call them aren't always needed (as in
MUST have), but they really do serve a number of useful purposes which
probably aren't immediately obvious to a newcomer.

In some cases they serve as a convenient shorthand, even on voice, for
longer phrases and concepts. For example, "CQ" is universally understood as
an invitation to communications, and "SOS" or "MAYDAY" as a call for help.

In other cases, such as "Q-signals", they serve to encapsulate common
communications situations into a package that seamlessly crosses over
language differences. Thus "QSL" means "acknowledge" to a person who speaks
English, "anerkennen" if you speak German, "reconocer" in Spanish, or
"reconnaitre" in French. (My knowledge of those languages is very rusty,
but I think those are reasonably equivalent words -- however if they are
not it doesn't matter and I don't have to worry about a precise translation,
because the person I'm talking to will automatically translate "QSL" into
the precise meaning in their language.)

Perhaps less important but still valuable, many vocations and avocations
have a "lingo" which, while it may strike outsiders as "quaint" or
"affected", is part of the fraternity and serves to identify aficionados to
each other. Auto racers say "skins" instead of "tires", bikers talk about
"Hogs", not Harley Davidsons, old time technicians say "mickey-mikes"
instead of "pico farads", fishermen say "he's a stick" instead of "he's a
skilled angler", and hams say "XYL" instead of "wife". I say, who cares....
my grammar teacher isn't a ham, so she won't catch me, and a Russian,
American, or Brazilian ham will all understand "TKS nice QSO" but they may
not understand "I appreciate the delightful conversation we've had".

Hi Cotter,

Actually there are all sorts of qualifiers which get tacked onto "CQ", some more widely known than others, and there even is one which is specifically intended for what you suggest -- it is "CQ RCC" where "RCC" stands for "Rag Chewers Club".

Others like "CQ DX" or "CQ __ (insert continent)" are used by DXers. Members of certain clubs or awards or interests are also often heard, as "CQ IOTA", "CQ FISTS", or "CQ YL".

During contest weekends you'll hear things like "CQ TEST", "CQ CONTEST", "CQ SS", or the plaintive "CQ VY1"!

And how do I know that you are "Steve, K4YZ"?
You could be anyone just taking over the name
and callsign of the real K4YZ. Just like I could
grab one of the local hams name and callsign that
don't have internet access and start posting as
them. How do I or anyone else KNOW that you
are who YOU say YOU are?

The only way I could know for sure who you are
would be to look you up on QRZ then call directory
assistance and get your phone number then give you
a call and ask a question that only someone using
this news group could answer, then I might have
some assurance that you are who you say you are.

I could post my name and my callsign and you
would still claim that I was not who I said I was.
I'm still not going to put my call or name
anywhere that starts with http or www or ftp for
you or anyone else.

One Angry Man

Yes I know that my name and callsign are on the FCC website and
any call server on the internet that you want to try. Also it shows
up on the Buckmaster and QRZ CDs that are sold all over the world.
The point is this, my posting here cannot be connected with my name
or my callsign so that keeps me somewhat safer from identity theft
than if I did post my name and callsign.

Just like not walking down a poorly lit big city alley at night will
keep you somewhat safer from being mugged. It could happen to anyone
at any time, but if you use a little common sense you can reduce
the odds of it happening to you.

> If you are worried about identity theft, spam, etc. all you

Cotter, the idea isn't all that bad; the problem remains of definitions. Most of the group won't agree on what constitutes a rag chew - or dx either. DX, at least in theory, stands (or stood for) distant or distance. Today it appears to mean 'rare'. I'd opt for 'difficult' as I would consider 24 GHz moonbounce DX regardless. Also, there are some instances where 'code' might alleviate some embarrassment as there are a lot of ops that **should** ZBM-2 (put a qualified op on their end).

;)

73 and hope all had a Merry Christmas
Jim AA2QA
(ps - over 9 inches received since early this am and now another 6 to 8 on the way. Anyone need some snow? Free. Just come and haul it away LOL)

From K4YZ:
> HOW could Amateur Radio change how it refers to Amateur Radio-specific
>practice in any other terms?
Its good to have words and procedures that are effective. I can see how it
would be useful in a contest, for example.

From K4YZ:
> Now, you did this rant a few weeks ago about "codewords" and other hobby
>related slang, and you were asked WHY Amateur Radio should be any different
>than any other sport, avocation or occupation.
> You never answered the question.

I do not object to codewords and procedures (see above). However, I do object
to it in ordinary conversation, when it is not needed.

One example is saying "73" to end a voice conversation or even a non radio
conversation (such as saying 73 at end of Ham Radio meeting).

And any other time that the reception of the other persons signal is poor.
When your
just rag-chewing you don't always have a "pipeline" connection with the
other party.
When in doubt it's best to maximize the readability of the spoken voice by
using the
most familiar words that another amateur would know. That's where the Q
codes
come into play, cause everyone "should" know them.

>

That's never happened at any of the club meetings I've ever been to.
Saying "73" to someone who your talking to in person IS dumb!

Entire post is response to (WA8ULX)

>> My Christmas wish is that the FCC sends all you No-Code CBplussers back to
>CB
>> where you belong.
You are assuming all no-coders came from CB. How would you know that? There
are no-coders that were not CBers before they got their amateur radio license.

>Who said it was an Insult? All it means is the person is one step above a
>CBer.
>Even though it is a very very Tiny step, almost a trip.

You are assuming all (no-code) Amateurs are "CBplussers", which may or may not
be true. How does code influence one's technical skills?

>>Those that focus at code at the expense of other aspects help dumb down
>>themselves and Amateur Radio.
>
>As well as the present written, which is the Big Joke.
True, the written test is easy. The subject material is worthwhile, but the
test is easy.

I feel the bigger problem is that all people want to do is operate, put up
antennas, and contest. My local club got some donation. They took suggestions
on what to do with it. I put in a suggestion to my club's Yahoo newsgroup to do
something technical. Other club members showed no interest. The club finally
decided on some new "loaner rigs".

>>Code is a waste of time.
>
>The written is a waste of time
How would you put up an antenna without understanding the material?

>>Those that do not focus
>>on code are more free to focus on the technical aspects.
>
>What technical aspects?
Homebrewing, kit building, antenna setups, troubleshooting equipment, using
test equipment, radio direction finding. Seems like technical aspects to me.

Seems antenna setup is the only thing practiced.

>Would
>they happen to be YOUR favorite forms of illegal activity?

Thankfully, between hang gliding, flying, Amateur Radio and a half dozen other things I like to do, I never found anything "illegal" worth doing to fill the void.

I also found was to deal with anger management that negated my need to resort to assault, etc. Sorry you haven't been as lucky. Perhaps if yuo sought counselling?

Hans, was there some need to re-post the entire post in order to retort
with three sentences?

He has asked the question. It was answered by me and at least two others,
and a reply question asked. He continues to go on about these "codewords"
which he refuses to define.

>Where are you going on R&R?

I was contemplating icehole fishing in Minnesota, but seems I found a
couple right here in RRAP.

>I do not object to codewords and procedures (see above). However, I do
>object
>to it in ordinary conversation, when it is not needed.

Then YOU don't need to use it. Set the example by doing. Otherwise there are about 2 million people around the world in Amateur Radio alone (and God knows how many others in CB and other radio services) that are not going to change for your benefit.

>One example is saying "73" to end a voice conversation or even a non radio
>conversation (such as saying 73 at end of Ham Radio meeting).

"73" means "Best Regards". It is unique to Amateur and CB Radio. WHY, Vipul, do you seem to be against just about every tradition of Amateur Radio?

You still have not answered my question as to WHY should Amateur Radio be different from any other hobby, avocation or occupation in it's use of such specific slang, jargon, etc?

From: "Kï¿½HB"
>Do you object (as in "complain") when someone else does it, or do you simply
>avoid doing it yourself?

I object when others use unneeded codewords. It keeps others out of the conversation. I have learned many of the codewords. I don't use it myself. I say low power, not "QRP".

From K4YZ:
> Again, WHAT codewords?
CQ, QSO,73, etc. I already admitted they are useful under certain situations.

> You still have not answered my question as to WHY should Amateur Radio
>be
>different from any other hobby, avocation or occupation in it's use of such
>specific slang, jargon, etc?

Ham radio is different because the jargon is substitutions (not even abbreviations) for words and phases, not actual words and phrases, like other hobbies. Abbreviations are common - substitutions are not.

>
>Kim W5TIT

Kim, dear, just what IS your problem??? I wasn't "apologizing" about
a damn thing! I merely made an observation that even as an apartment
dweller, I have not been severely limited as an amateur radio operator!
In fact, I'm rather proud of what I have achieved! Some people (like myself)
simply prefer the relative simplicity of apartment living -- which is not to
say I plan to do it for the rest of my life, by any means! However, if I do --
would you PUHLEEZE mind if I make my own choices?

Why must you always read the totally wrong things into simply everything
that everyone says in this newsgroup? Has it ever occurred to just once
let something go without one your typically puerile remarks?

BTW I wish you and your family a very Merry Christmas and a Happy
New Year!

73 de Larry, K3LT

: Ham radio is different because the jargon is substitutions (not even
: abbreviations) for words and phases, not actual words and phrases, like
other
: hobbies. Abbreviations are common - substitutions are not.

Here are a few terms from other areas, all of which are substitutions (not
abbreviations).

"Hog" from motorcycling jargon. Substitute for "Harley Davidson" .
"Stick" from fishing jargon. Substitute term which means "expert angler".
"Bogey" from military jargon. Substitute for unknown (possibly hostile)
airborne radar contact or visual sighting.
"Skunk" from military jargon. Substitute for unknown (possible hostile)
surface search radar contact.
"Stinkpot" from sailing jargon. Substitute for powered watercraft.
"Fox" from lexicon of young (and not so young) American males. Substitute
for "wow, check out that babe!"
"Flick" from entertainment. Substitute for motion picture.

Hitting a little closer to home, the internet and the computer industry in
general are rife with codewords and jargon with terms like "troll", "flame",
"surf", "cookie", "404", "grok", "spam", "urchin" (munchkin), and so forth.
None of these are abbreviations, but rather substitutions which serve to
quickly communicate common concepts and ideas among "those in the know".

We could go on and on, but hopefully you will identify with the notion of an
"insiders" language which many professions/age groups or other special
interest groups adopt as a sort of "fraternal handshake" by which they
identify themselves to other members of their "insiders group". Amateur
radio is no different. Kick back and enjoy.

Steve. While you seem to be a busy man between your many posts do you think you could possibly take the time to look into obtaining a spell check program? Your veracity is tainted by the fact that you cannot or will not learn to spell correctly. I guess you could always claim that your keyboard has a couple keys missing.....

You're a good example of why short q's are a much better idea, i.e.,
get away from an overseas Brainiac like YOU before they can get wound
up. Also you might note that The Bureau did not "lose" his "little
tiny world" cards from OJï¿½, OHï¿½, 5H3 and a bunch of others like The
Bureau "lost" your T5 cards.

Yer whole non-point is moot Brainiac, you can't yak for 10
milliseconds on HF let alone 15 minutes because you have yet to figger
out how to move RF out of yer reddio and into an antenna which doesn't

come shrink-wrapped from HRO.

There are reasons for that, Steve is a member of the RRAP Back Channel, he knows where I been.

I guess it's time to 'fess up, it's declassified. I humped thru U.S. Army Corps of Injuneers officer training see but via a series of odd events shortly after completion of that drill I found myself in command of a U.S. Mavy LDB. Another short time later an SMD was added to my command. The SMD didn't last long, I had my eye on bigger things so they dumped the SMD and gave me command of an LMD in addition to the LDB.

Hey Mike,

Don't know how we agree on other stuff, but I would agree with your statement below. Anyone who votes democrat or republican is nuts.... It is a no-win situation on either side of that political coin. Look at this last presidential election, neither partie's candidate was worth a damn, except for being a puppet on a string for their respective parties. "Vote Independant; Think For Yourself, Not What People Want You To Think" is my motto. "Free Thinking" is the one thing that the republican party cannot take away from me.

Hey...bottom line here is that old Stevie is NOT owed an answer by anybody.
If you do not like his questions, tell him to blow it out his lower cavity.
Who is HE anyway? For all we know this guy is using somebody elses call
....pay him no heed and let him blow his wind skyward.
Sorry, Steve, but you rank near the bottom on my importance scale. I hope
your ego doesn't suffer more than it already has, but you, Steve, are
relatively unimportant in the scheme of things.

>say low power, not "QRP".

Good for you, except thqat "QRP" is as much a subset of Amateur Radio as is
"EME", "PACKET", or a dozen other specific disciplines.

Again, why should Amateur Radio change just for Vipul Shaw?

>From K4YZ:
>> Again, WHAT codewords?
>CQ, QSO,73, etc. I already admitted they are useful under certain situations.

Still running things together I see.

Then stop whining about "codewords". They are NOT "codes".
>>You still have not answered my question as to WHY should Amateur Radio
>>be
>>different from any other hobby, avocation or occupation in it's use of such
>>specific slang, jargon, etc?
>
>Ham radio is different because the jargon is substitutions (not even
>abbreviations) for words and phases, not actual words and phrases, like other
>hobbies. Abbreviations are common - substitutions are not.

Absolutely ludicrous, Vipul. I can start dumping tons of other
"substitutions", "jargon", "slang", etc etc from not only Amateur Radio, but at
least a dozen other hobbies or sports I have participated in. In thier own
applications they have very specific meaning.

You have not made any valid point here. I think you are confused.

Ah, yes. I've often heard others say, "That Brian is a real leader
because he has told us so". I can picture a group of young fellows
following you, mostly out of a sense of mild curiousity as to what
you'll do or say next.

> I freely
> give my time to help keep these boys pointed in the right direction.

That's nice. Some of us have given of our time in an effort to get you
pointed in the right direction, so far to no avail.

> They learn about many things in scouting, and 1n34a are just a part of
> it.

There's a monumental understatement for you.

> They'll learn what they can do, and they'll learn what a 1n34a
> can do. If you're interested in changing the curriculum, you'll have
> to get involved yourself.

I'm working on an idea for actually manufacturing 1N34As to save the
young fellows from having to roll their own.

> But it might take you away from those out of band Frenchmen.

Wanna play a game of "bootlegging from Somalia"?

Perhaps if you spent as much time BEING an Amateur operator as you do
whining about how you don't like "this or that", you might qualify to be one.

But I doubt it.

Love or hate the guy, ya gotta admit K1MAN is kicking the FCC's ass all over the radio spectrum and making the ARRL have egg all over its face.

Hmmmm, FCC suffer greatly from foot-in-mouth disease after telling everyone for years k1man is legal. Now try to reverse position? hahahahahahahah should be great interest, watch k1man kick more FCC ass.

> sought counselling?

The only thing that makes me angry is
know-it-alls that don't know jack.
More educated idiots running around this
world that don't have enough sense to
come in out of the rain. But because
mommy and daddy had enough money to send
their braindead children to school they
make megabucks. I was poor and didn't get
to go to college and have had to work for
everything I get. When some little whiner
fresh out of school tells you how you don't
know how to do the job you've done for the
last 18 years and he knows the right way
to do it, after a few days of this you just
loose it and smash his little head.

Just wait until you get old and have an idiot
boss half your age that knows twice what
you do, you'll see how well that anger
management course works then.

I can have more cards printed. But you're still not in my logs and so you're still not gettting one of my T5 cards. Quit asking about my cards, there's none for you.

> come shrink-wrapped from HRO.

Brian, that's never been a problem in the past.

And I certainly won't be talking to you on the air, unless its to work you to get you out of the way, like those disruptive 10KW IT stations calling on top of a QSO in-progress.

Basically, a jerk on RRAP = A jerk on the air, no matter how hard you and Larry try to say it isn't so. No wonder you're such a big backer of the 11.8 second QSO. At about 12 seconds people catch on that you're a blow hard jerk, then they QSY. I really wish you could have good amateur radio experiences like I've had, but the ball's in your court. I hope you figure it out before SK time.

73, Brian

Did you have to lift a diode, or buy a new eprom to get it on 27.555?

Boggles my mind.

> The irony of all this is that these are women
> who live in or near the Big D. One would think that city women would be far
> more independent...wouldn't they?

All depends on where and how they grew up, perhaps. Where they live
now may not be an accurate indicator of where they're from.

> No joke...the first time all the
> brothers-in-law (3 of 'em) and my father-in-law and my husband were going to

HAWW! The times ya need a videocam, it's never around!!

> Suffice it to say that moment was a bit more liberating for my mother-in-law
> than my father-in-law would have intended.

What was his problem? Was he afraid you'd sell off things he wanted to
keep? Or afraid you'd have some independent $$?

If you weren't going to sell off things he wanted to keep, what's the
problem?
>
> > But the stats do support such a theory.....The women finally get sick of

> adore him and there isn't a soul or other man who'd pull me away.

Seems to me there's nothing wrong with negotiating certain things with one's main squeeze, as long as it's not a double standard. Double standard as in "she doesn't go to bars with her girlfriends but he goes to bars with his buddies."

Was he ready to stop going to bars wtih his buddies if you'd give up doing the same with your girlfriends?

> Women can take care of themselves.

Some PEOPLE can take care of themselves. Others can't.

> Mind you, I am far from a women's
> libber. In fact, I can't stand 'em.

Ya gotta define what you mean by "women's libber". Most of what you've described in this discussion is the very essence of "women's lib":

- Financial independence for women
- Equality in relationships
- Skills/behaviors/roles determined by interests and abilities, not predetermined gender images

> BUT, I can stand up for myself.

There ya go - pure "libber" talk

> And,I can change my own tires.

More of the same! That's not a bad thing.
>

> > Wyoming? Near the top of the scale.
>
> heh heh heh. Wonder if that's 'cause the guys are crappy at choosing, or

> the women are?

Perhaps. Or maybe it's a bunch of other factors:

- getting hitched too young
- mismatched expectations of what the other person is supposed to do
- availability of cheaters

Or maybe here's the big one: Often the very thing that makes someone attractive when being pursued makes them insufferable once caught. Example: Some women like a man who "takes charge" and "knows what he wants" and is "independent" and "charming". But when they actually GET such a man, they discover that "takes charge" translates into "wants to be the boss all the time" and "knows what he wants" includes "acts like a spoiled child when he doesn't get it". "Independent" and "charming" are fun until she realizes they equate to "undependable" and "flirts with any female that will listen to his drivel".

And of course there are plenty of examples in the opposite gender direction.

> > > >Ah. Well, see? WE northeastern women know we don't *need* you men to

> > > constant barrage of country-and-western music.
>
> HAW--to use your term!!!!!!! Man, you got that right. Remember that
> callsign PATTOEY?

Yup. But think about it seriously for a sec - if one is barraged by descriptions of cheatin' sweethearts, might it not become somewhat more acceptable? Or at least seem more normal?

> > What's probably going on is that the social trends that hit the Northeast

> > predictable
> > results.
>
> I am sitting here laughing at what I am going to say: no, it's that more and
> more of us Yankees moved in.

But it's the Yankees that have the low divorce rate!

Or maybe it's the language barrier. After all, men and women speak different languages, though they use the same words. Example of word definitions:

"Navy" Men: Military organization involving ships and related facilities
Women: Dark blue

"Clutch" Men: Mechanical device for controlled transmission of rotary
motion
Women: Purse without a strap

"Pump" Men: Device for moving or compressing liquids or gases
Women: Shoe with a defined heel

"Blazer" Men: Type of vehicle made by Chevrolet
Women: Jacket that can be coordinated with pants or a skirt

"Pick up" Men: To raise by grasping
Women: Buy

"Hose" Men: Flexible tube for handling liquids or gases
Women: Socks or stockings

There are lots more.

> > Getting 20 people together may be a bit of a job, tho. Only time I see

Steve, I was referring to his limited view of amateur radio, not his career.

Do you limit your amateur radio operating strictly to 11.8 second QSO's?

Oh no. For what it is worth, that is how I ended up with my 1st class radiotelephone license back in 1966. A bet at college. Ouch, I was sooooo hung over the next day (when they gave the test; I think it was the 1st and 3rd Friday of the month) - they FCC guys in Buffalo, NY, took one look at me and asked if I really felt up to taking the test .. ;) A couple of trips and I had my 1st phone, extra, and commercial telegraph ticket.

A point of fact:

You are not anonmyous when you post on the net. Not putting
your name on the post is not going to keep your identity away from
someone who really wants to know.

You can avoid the bad guys in a few simple ways. I assume
that you are behind a good firewall and a good proxy server? Also a
really good idea to steer clear of some of the internet neighborhoods
you go to. Chat rooms are bad, bad, bad. Instant messengers are really
bad. Downloading mp3s can be inviting baddies into your machine.

That must have been before my time here, Steve. I'm really
sorry to hear that. There *are* good people here. And funny how most
of them use their own names.

> I HAVE, however, gotten spam from chat rooms, magazine subscriptions and
>"registering" for other sites (ie: AOL, Yahoo, etc)

And HOW! Before my kid got his own computer, He used A*L's
instant messenger, and it ended up lousing my computer up, I was doing
some psk31 one day, and suddenly my browswer pops up with an ad.
Problem was, my browser wasn't running at the time. So if the spyware
they put on your machine can do that, it's humorous and a little sad
that someone thinks they can avoid that by making up some cute screen
handle. Speaking of magazine subscription snailmail spam, I had a
subscription to a mag in 1981. My name was misspelled as Mihal instead
of the correct way. Well a week ago, I got a solicitation under that
name! We must all be in so many databases, it isn't funny.

> Simple facts are usually not comprehended well by the simple minded, Mike.

Yup. Yet that is what I have trouble comprehending.

While we're at it, why don't they remove those annoying codes
on resistors. None of that dumb color code stuff. Or even worse, that
confusing number scheme where three on the end of the imprint doesn't
mean three, it means 3 zero's. Sheesh, the resistor people must be
trying to confuse people and keep then out of the resistor reading
club! 8^)

So? He doesn't make the rules - the FCC does.

There has never been any sort of age requirement for a US ham license,
and FCC is obviously convinced there's no need for such a requirement.
Mr. Anderson has not presented any evidence as to why there needs to
be an age requirement.

btw, an 8 year old passed the "old" Extra back about six years. All 5
writtens and 20 wpm code.

Kids do the darndest things.

Thanks, but with all the soldering tools I have already it's a bit
redundant. I always like good tools, tho.

Let's see:

- Propane torch w/soldering iron attachment for heavy antenna work
- Old 100 W classic iron
- 100/140 W Weller gun
- Two small pencil-type irons for little stuff
- Milsurp WCTPK kit with various tips and desoldering attachment, plus
grounding strap

eHam.net Survey

This summer at the ITU World Administrative Radio Confernce (WARC) to be
held in Geneva Switzerland one topic will be the elimination of the CW test
as a requirement for HF operation. Do you agree that the CW requirement
should be removed?
Posted: Dec 21, 2002 (1912 votes, 112 comments) by K9PO

Survey Results
Yes 32% (619)
No 62% (1186)
Don't Care 6% (107)

Hmm... (It'd sure be nice if it were to be decided by a vote.)

Good point. These substitutions are words, while QSO, is not. I'm sure you can find other examples that are not words.

>None of these are abbreviations, but rather substitutions which serve to
>quickly communicate common concepts and ideas among "those in the know".

Even if you know the codeword, you may still not "understand" it. Those that understand Ham radio's true purposes are part of the cult. I'm not saying every Ham is in a cult, just the majority of them.

my vote didn't get counted! i demand a recount! there must have been
hanging chads, or the polling places were closed too early, or maybe they
told me the wrong day to go vote, or i was confused by the ballot and
thought i was voting to eliminate the requirement to copy rtty by ear, oh
hell, its all political anyway and they'll do what they damn well please so
who cares about this poll anyway.

Vipul, I think you need to take out your license, write "CANCEL" on it and
mail it back to Gettysburg. Sell your equipment and forget you ever heard
about Amateur Radio.

You obviously have no understanding nor acceptance of anything save for
the way you envision it. I think it will continue to be a point of bitterness
to you, so better now to be done with it than to continue to irritate yourself
with a whole world of radio operators who refuse to change for YOUR benefit.

I don't see what was so great about him, he was messing around where he shouldn't have been, got caught, spent time in jail, and hasn't legally been able to touch a computer for what? about 10 years? What makes him so great?

Now the bumbling idiot is getting rich off of a book, about lying and deceiving people. Great Guy.

Too true!

But when we are talking about public education, private schools are often held
up as some sort of paradise that the public schools should copy. What's
forgotten is how the private schools don't play the same game, let alone obey
the same rules.
>>
>> The main problems with public schooling are:
>>
>> 1) The public schools have to serve every single student in the
>> district. Private schools can pick and choose who they accept. This

>shafted as their kids get even crappier schooling.
>
Yup. I'd be all for vouchers if the private schools had to play by the same
rules as the public - for example, having to take any kid that wants in,
regardless of special needs.

>> 2) The public schools do not have direct control over their funding,
>> but are directly controlled in their requirements. Public schools have
>> to answer to at least three levels of mandates (district, state and
>> federal). But most of their mandates are "bricks without straw" - the

>> resources to do it.
>
>Unfunded mandates....
>
Almost a redundant phrase, isn't it? Note also that high real estate taxes
don't necessarily mean great schools. Example: Township A has lots of
high-value real estate and relatively few homes with public school kids in
them. Even a low school tax rate results in tons of revenue. Township B has
lots of houses, most of them full of kids, and much less commercial real
estate. Same tax rate as Township A results in much less $$ per kid.

>an english major at Notre Dame said it didn't make sense to him
>either. The teacher said "memorize this poem, you are required to
>parrot it back in class tomorrow." We parroted the thing, and then
>moved on to something else. No analyzing the poem, what it meant,
>or such. What's the point of memorizing the damn thing, then?

Nothing at all. We had to do the same thing in school. They made us memorize
them because it was easy for the nuns to check our progress that way.
>
>> Are you saying that elementary school should be taught that way?
>
>Ideally in early grammar school you'd want to get the kids to
>want to learn stuff.

'Round here, the kids LOVE school. I'm not kidding - they're motivated. The little kids cry on the last day of school because the school year is over and they have to wait three months for it to start again. When I was a little kid we cried on the first day of school....

>And somewhere in high school it's more
>up to the kids to study, and if they don't, they look forward to
>a career flipping burgers. In grammar school I had no idea what
>my father did at work other than that he caught the bus in the
>morning, did "something" in an "office", and returned home for
>dinner.

My dad had his own business for 30+ years, and took me to work with him on Saturdays, some Sundays and some vacation days. Typical day was at least 12 hours work. Boy did I learn some stuff (not many 12 years olds could spot weld, but I could). Convinced me early on that education was important....

>School was little more than doing stuff that teachers
>wanted because if you didn't they'd beat the crap out of you.

Yup.

>A 4th grade teacher assigned so much homework you wouldn't
>get done until 10PM. Lots of written work and reading the
>textbooks. I did the written because that produced hard
>copy to prove you did it, but she couldn't prove that I didn't
>do the reading (I read it but forgot...).

Ya broke da code!

>Once I had to get
>the spelling class list of words and I called the teacher at home.
>Next day she was pissed that I bothered her. But she didn't
>mind bothering me with all that homework..... (I reciprocate
>I see no reason to be polite to you if you're rude to me.)

GAWD, that took big ones! We'd never have called a teacher at home fofr any reason - the paybacks would be ten times worse than not doing the work! We kids would just call each other and get the list.

Hey, you're the one who validated the comment about the story by saying "I
don't believe you." If you don't want to validate a particular portion of a
post, then don't comment on it. It is the *only* part of the post I was
interested in getting involved with. Whether you choose to see that as
"adding" to what's actually being discussed, is incidental. You discussed
it by making your rhetorical comment about it.
```

Hey, watch it! I resemble that remark about "Second Coming" Republicans!
However, I'd vote for a Democrat as long as he/she was Pro Life, Pro-
Second Amendment, anti-big government, Pro-Military, and generally
conservative on social issues. I wouldn't care if he/she were a bit of
an Environmentalist, because I'm one as well -- but I wouldn't let a few
Spotted Owls or some Snail Darters get in the way of legitimate progress
or cause land owners to lose the use of their property! I have voted for
such Democrats in the past, but not lately (the last couple of decades).

That was a JOKE, son! Don't go Steve/Brian on me now!

>Have you done better with a similar low-cost antenna?

My primary antenna is a "dual band" 20/10 meter parallel dipole built from approximately 35 cents worth of scrap wire purchased at a radio club auction almost ten years ago. I've used it to make thousands of CW and digital QSO's. I can't honestly say that counts as "doing better" than you've done with your trap dipole, but there you have it.

I think the Times Microwave web site has a loss calculator, if I remember correctly. I don't remember the URL, but I'm sure a search on Times Microwave LMR coaxial cable would dig it up for you. Yes, the LMR 240 will weigh significantly more than RG-8X. However, the lower loss may make

a difference, particularly on receive when trying to pull in a QRP station.
As always, your mileage may vary.

Merry Christmas!

73 de Larry, K3LT

It says that the 8 year old can out-do Bruce, and Bruce had to ride
the coattails of NCI to get Extra.

Was there ever any doubt? Any at all?

Can you come up with a list of other folks posting on here who don't
make up the rules?

Well, there's even men like that (that hand over their paychecks each week
to the little woman *snarf*). But, my experience sees a lot of women who
have to ask if they can spend money.

[SNIP]
> >
> > The irony of all this is that these are women

far
> > more independent...wouldn't they?
>
> All depends on where and how they grew up, perhaps. Where they live
> now may not be an accurate indicator of where they're from.
>

Yeah, that's true. That's why I've never been able to figure out if it's a Southern vs. Northern, country vs. city, or whatever. It's kind of hard to ask someone where they were raised without them asking why--and I don't really feel like getting into a debate or discussion with them about this whole thing. Heck, I'm certain there's some folks whose husbands would have me as public enemy number one.

> >
> > No joke...the first time all the

> goes to bars with his buddies."
>

Well, true on negotiating...or not agreeing to be someone's soulmate if they
are contrary to the lifestyle of the one they say they love. For instance,
if something really, really means that much to me--no matter what it is--I
don't want to have to negotiate. I want my husband to have the faith and
understanding that I am compassionate, understanding, and respectful enough
to make the right decision--but understand that sometimes that right
decision is for me first and us second. Same way for him. Now, before you
go off thinking I am being really ridiculous on that, here's an example:

I have always, always wanted to go to space. It has never been considered by me as within the realm of possible. My husband completely loses it at the thought of me going to space (I gave him the option, in my theoretical example to go with me; he did not want to). So, the question is--do I go? He must have enough understanding, compassion, and respect for me to understand that I cannot let "us" stand in the way of going to space. I understand that he may not like it, but it is his fear of my not coming back that he doesn't want me to go. To me, the risk of not coming back does not weigh much against the absolute once in a lifetime chance of gazing down on this Earth from out there. I could not let "us" be the weighting factor...I would go--*with* the perfect understanding that he may not want to be married when I get back.

Hmmmm, that's a really weird example, but I hope it's illustrative.

>

>

Yep, yep, and triple yep. All the things I found attractive in my husband and father of my two children--only to realize I was in an insufferable marriage six months into it. I stayed for three years, waiting for him to change, or for me to get better at accepting how he was.

>

Yeah, but see...my take on that is that those people who think like the
above haven't had a discussion with each other. Once I know a man thinks
like _______ and once he understands that I think like _______, all that's
left for us to do is be aware and sensitive to those differences. Dave/K8MN
will roll his eyes back at that one, but it's true, as far as I'm concerned.

>It says that the 8 year old can out-do Bruce,

You are so full of it, what it says is Brian is to dumb to do what an 8 Year old did.It also says Brian would still be a No-Code CBer if the FCC hadnt given him a Free Handout.

Bruce had to ride
>the coattails of NCI to get Extra.
>
>
And what this says is, Brian is to Dumb to take advantage of the give away Extra. It also shows how stupid you really are. Its amazing that you are stupid enough to believe NCI was the reason for Dumbing Down. Wake up it was the FCC who did what they wanted to do along. The only thing NCI did for you, was take your money, and brain wash you into believing Karl the looser was something special.

Hansl:

Thanks! Santa already gave me a new car this year, so it's too late for the Kent paddles! I'll just have to keep going with my 20-year old standard model Bencher BY-1! I hope Santa was generous to you and your XYL!

BTW how did you do in the 10-meter contest? Just saw your line in the "Logs received" listing while checking for my own and Kï¿½UWO's. I managed 169 CW QSO's and 51 mults for 34,680 -- which was about a 33,000 point increase from my score last year! All done with a dipole on my apartment balcony (just for Kim's sake!).

Right. Not everyone speaks "proper" English. A ham who speaks
almost no english can carry on a QSO (oops- make that a two-way
conversation sorry for the codeword 8^)) with just about any other
ham. The reverse is also true.

I suppose you could call them "codeword". But it is one that
is designed to be understandable to as many people as possible.
Perhaps anti codewords is more accurate.

The words are not needed on repeaters, where the bulk of Techs
spend the bulk of their time (a bit of conjecture on my part)

And it isn't considered "best practice", but I think hams can
be forgiven that - with the exception of saying Hi Hi instead of
actually laughing, which I have to admit, gets on my nerves.

I think Vipul just needs to broaden his outlook.

You could try asking "what does QRP mean?" That usually works
for me.

All these "Q" signs are published in many places. They are in
the back of the ARRL amateur handbook.

Some web sources are:

http://www.plexoft.com/SBF/q-signs.html

http://larc.unl.edu/qsign.html

http://home.earthlink.net/~k7bfl/intqsig.html

Hey, Philosophy! 8^) Now we're getting some where.

I'm pretty sure he is Steve because I can do a lookup, (though I haven't) I can and have sent him personal email. And he answers. People who steal identities usually do it in a hit and run manner.

>I could post my name and my callsign and you
>would still claim that I was not who I said I was.
>I'm still not going to put my call or name
>anywhere that starts with http or www or ftp for

NO one is forcing you to. It's just that your posts will recieve a lot less credance. If that's okay with you, its fine with me.

Just like when people complain about politics but don't vote.

"None of the above" was not an option.

>"Vote Independant; Think For Yourself, Not What People Want You To Think"

The last "independents" in Presidemtial elections were Ross Perot
and Ralph Nader, both of whom were scarier than the Demo-Rep
candidates.

The first and last independent that I voted for was John Anderson in
1980, because neither Carter nor Reagan were acceptable.

None of the above were hams....

US VIRGIN ISLANDS, KP2. Joe, W8GEX and John, WZ8D will be active as
N8Z from St. Croix, IOTA NA-106, from December 30 to January 8.

==========

Why do we even bother with callsigns anymore when it seems that anything
goes? K1B is Baker & Howland, N8Z is KP2...

So, are we now going to have a revised DXCC list:

K SMOM
K Monaco
K Agalega & St. Brandon
K Mauritius
K Rodrigues I.
K Equatorial Guinea
...
K USA
...
K South Africa
K Prince Edward & Marion Is.

Why don't just give everyone everywhere callsigns they want, no
questions asked? Hell, we're already half way to CB anyway.

Your stating "Yes it is" doesn't make it so. I choose to ignore it
because it isn't remotely relevant to what was under discussion: the
claims by a member of the lunatic fringe that we are sheep being raped
by our government.

> http://carbon.cudenver.edu/~bstith/loren.htm

What I learned about the homemade biologists' efforts from the above
link:

"One Problem: Lorenzo's Oil May Not Work

Is the ending of the movie, showing many kids that have been
successfully treated, a bit of propaganda or not? Most researchers have
concluded that the kids never would have gotten the disease and that

Lorenzo's Oil is not effective (Uziel et al., 1991; Rizzo, 1993;
Aubourg et al., 1993; Odone and Odone, 1994; see also Time, Sept. 20,
1993, page 76). Dr. Moser suggests that that Lorenzo's Oil has no
effect on ALD kids showing symptoms (e.g., Lorenzo) probably because the
erucic acid does not enter the brain (thus, VLCSFAs still
build up in the brain) (Moser, 1995). These results suggest that
Lorenzo's survival is due to viability in the disease and the intense
effort
put forth by both Lorenzo and his parents (not the use of Lorenzo's
oil)."

Indications are that they have no interest in radio.

Yeah, but you can look up (i.e research) the resistor codes in some chart or whatever. Knowledge of how to apply the values assigned is the difference.

>Steve, I was referring to his limited view of amateur radio, not his career.

It doesn't matter, Brian. I'd take Dave's word over any one else's in this forum when it comes to operating from a DX location, and I have BEEN the "DX" before.

>Do you limit your amateur radio operating strictly to 11.8 second QSO's?

Only in the contests or pile-ups. I know enough about "good Amateur practice to know when 11.8 seconds is my "fifteen minutes of fame" and when I can take the liberty of carrying on a conversation.. I have a (sponsored) RCC award. (Ooops, there's another one of those "codewords", but since it's an Amateur Radio institution, I'll let Vipul do some research and figger this out...maybe he'll learn something)

Exactly! Do as many are now doing. Go to qrz.com, look up
a vacant call sign or one some old guy has who is no longer active
and then operate inside the ham bands. The word has been out
for a long time, do not operate outside the ham bands, that draws
attention. Operate inside the ham bands with a call sign. No one
ever questions it. I know from experience. If a pesky ham happens
by, ignore him, qsy, or if you really want to talk to someone, tell
them you just got the call and it must not yet be listed on qrz.
So simple, why would anyone even bother getting a license!
Change freqs. often, don't stay on one particular freq. learn ham
slang, avoid CB jargon.

You scheme worked well for a wannabe in Northern Virginia until I happened to be mobiling around one day in 1994 and heard a familiar call sign that belonged to an old-timer who helped get me started in ham radio. I called him, he came back. I told him that I knew the original owner of the call sign and wondered how long he had had the call. I got a bit suspicious when he did not come back -- this was on a 2-meter repeater.

Next chance I had, I looked up the call only to find that the old timer was still very much alive. I gave him a phone call, we chatted a bit, and he confirmed that, yes, he was still alive and, yes, he was still (call sign).

I contacted a very active ham in the area who asked a few questions, located the bootlegger, and busted him with the FCC.

Why go to all the trouble and risk when a license is simple enough to earn?

Oh -- silly me -- I forgot that we live in the age of
I'll-do-my-own-thing-and-screw-your-stupid-outdated-rules.

In addition, most of the study guides for licensing also include not only a list of the Q signals and their meanings but also a list of the commonly used abbreviations and their meanings plus other ham terms such as OM, YL, etc.

You missed the point. I'm not bitching about vanity calls; it's using
the (continental) US calls from other DXCC countries without signing
that bugs me. How did N8 get to be KP2 all of a sudden? Should we
discard the DXCC prefix system in favor of "anything goes" just because
it's legal?

There are reasons DXCC countries were assigned different prefixes: so we
can tell who's operating from where. Using N8 from KP2 and K1 from KH1
kinda defeats the purpose, especially when the same calls can and will
be reissued and used from somewhere else.

Brian goes on a rant without bothering to attempt reading and
comprehending what the other fellow has said. To a DXer, any country
you haven't worked and confirmed is "DX". I've chewed the rag with
plenty of "G" stations on 20 or 15 or 10m. I've had the country
confirmed for decades for my overall DXCC. I did not attempt to chew
the rag with "G" stations running pileups on 6m or 160m since they were
busy handing out a new band country to many.

> I have a (sponsored) RCC
> award.

You didn't have to pay ten bucks for it either. That has all changed
with the "new ARRL".

For the entire six weeks we did skits, jumped through unnecessary and
irrelevant hoops (according to some) and we were forced to participate
in numerous archaic rituals and traditions. We did relay races and
other feats of skill. We got to mess with maps and compasses and even
rifles. We had to responds to hand motions come up with certain noises
or phrases when a certain word was said.

I haven't tried to impress you with my DX totals. I was out of the
country for over fifteen years, Brian. I haven't even tried to impress
you with my operating abilities. I already devote some of my time to
various organizations though that isn't a necessity. I've even
particpated in past Jamborees On The Air from Sierra Leone and Botswana
putting local Scouts in touch with U.S. and European Scouts.

If you go back and read the thread, you'll find that is the case. I can
almost see you and the impressionable lads crouched by a campfire,
melting glass beads for the cases. Good leadership is key in these
situations.

: that bugs me. How did N8 get to be KP2 all of a sudden? Should we
: discard the DXCC prefix system in favor of "anything goes" just because
: it's legal?

If I go on vacation to KP2, should I change my call? That's the only way I could comply with your mythical "DXCC prefix system". Just as easy to glom on to a temporary 1x1 special event callsign like these guys have done. What's the harm?

The FCC could care less about DXCC, and there are several call prefixes that will probably NEVER be issued under the present system, like KP1, KP5, KH3, KH4, KH7K, KH9. On a more global scale, what's the need for reserved prefixes like KP1 when no operator will ever be issued such a call? But who knows..... many decades ago I was assigned the call KG6AQI when I lived on Guam --- now the call is assigned in sequence to a fella in California.

Lets see now, you contacted a "very active ham." So was he 83 or 93?
and spends most of his morning on 2 meter repeaters with his other ham
buddies in their 80s, discussing what medications they are on. So much
for the "very active ham." And you say he asked a few "questions"?
Yup, probably went like, "Uhhhh Joe uhhhhhhhh, you been a hearing any
strange stations on the air 'round here," And Joe said, "Uhhhhhhh no Mike,
uhhhhh uhhhhh there been a problem"? So much for the "questions."
And now this gem, "Located the bootlegger." Oh my yes!!! Instantly
he was located!!!!! Won't even address that, just flush it! And here's
the best one, "Busted him with the FCC." So please share with us, did
the FCC make him a deputy FCC junior ranger or just kind of let him tag
along? And of course, we all know the FCC has a Hot Line, on which
it takes calls from ham radio operators about bootleggers and upon
receiving a call, the FCC Special Reaction Team swings into action with
lights and sirens blazing as they speed to the location of this latest
Public
Enemy Number One, called "Bootlegger." The media interviews
witnesses and of course the story is all over the 6pm news and tomorrow's
papers!

Sounds good; I had a guy call me one time on 160 meters. Unfortunately, he chose the callsign of a friend who lived only 2 miles from me. Quick land-line. Hopefully, the FCC will start enforcement (but I doubt it). I may not only have to switch to CW, I may have to brush up on my land-line (American) Morse as I haven't seen any pc programs for that ;)

Read my other post. Ignorance is curable; stupidity isn't. The dope on 160 happened to choose the callsign of a friend of mine who lived only a mile or two away. First, his signal shouldn't have been down at S-2, second, perhaps more importantly, my friend had no antenna for 160 meters - he operated on 75 and down (in wavelength).

N8QRZ goes to the US Virgin Islands on vacations and operates from
there. What call woulk you expect him/her to use?

S/he likes it so much that s/he and the family move there. The FCC
does not require a call sign change. What is so wrong about using
the existing legal call sign?

Surprisingly, the W6 1x3 that I held from 1957 until I turned it in
for a 1x2 in 1977 has never been reissued or claimed as a vanity
call.

So much for the shortage of 1x3 calls.

(The 1x2 that I turned in to reclaim my original K2 call was snapped
up immediately by a club the day that it became available, just
before MY club could reclaim it.)

Phil,

I, too, lost my call when I let my ticket expire (N2JH). I've been thinking ... as long as we are on a vanity callsign search, could you help me to get a special callsign? A 1X1 would be nice, but it has to be a special event. How about simply "W2"? Or maybe just "W"? I'm really enjoying the repeaters ;)

It's not so much a shortage as that they can no longer be sequentially
assigned to hams. The sequences have been run to the end. However there
are a fair number of expired calls that are available but they won't be
assigned unless requested as vanity calls.

My main contact for those things in Gettysburg, Darlene Reeder, the
processing guru of Amateur Radio Service applications, is retiring
at the end of the month after 40 years of service there. She kept
things flowing smoothly and solved the problems when they didn't.

Look for processing there to be a vaudeville fire drill until a
competent replacement is found.

Phil - your prayers are answered. I can provide a letter from my boss. The FCC needs a competent employee? I'll get a letter from my boss. He says I'm really IN competent (I assume if one is in, it is good; if you're out, you're no good). Not only that, he'll tell you I really try. He told me I was the most trying employee he has! ;) Everyone forgets at times that it is a matter of budgets. I'm sure a lot of folks are really getting overload at various government jobs as the dollars are rapidly disappearing. My gut feeling is that almost everyone does what they can with the cards they are dealt. I only wish I could remember the folks at the Buffalo office (assuming they are still around). Believe it or not, I did have some fun on those treks to Buffalo (I'll never forget going to Buffalo from college on a bet - I was soooo .... hung over). They took one look at me and asked if I really wanted to take the test (I got the 2nd radiotelephone license with radar endorsement on that one - I had to go back one more time for the 1st). It was crazy, but I actually enjoyed seeing those folks after a number of times (general, extra, 2nd phone, 1st phone, 2nd telegraph - well, the extra and 2nd telegraph were done in one visit. I don't know if I did the cipher groups as it is so confusing as I did a lot of that for that for the US Navy) ... despite what many think, I believe they are dedicated folks just playing the hand that is dealt to them. BTW, thanks for your time, too. ;)

For radio regulatory purposes, the US Virgin Islands are "part of
the United States" and amateur radio is regulated by the Federal
Communications Commission (FCC) there.
>
>When I go to Gibraltar on vacation, I use ZB2/G3NYY. It's a very
>similar situation. Gibraltar is a British territory, but not part of
>Great Britain.

Does UK radio regulatory law specify or allow use of a "regular" UK
call sign issued to the operator when s/he is in Gibraltar or must
the operator append the location indicator?

US regulatory law allows use of a "plain" US call sign in the US
Virgin Islands - without a "location indicator" - if that is the
call sign assigned to the operator. I was one of those folks who
fought long and hard several decades ago to get the FCC to change
the rules which formerly required detailed logging as well as such
indicators and the words "portable" and "mobile" when operating away
from the station's "authorized location", which is another concept
that no longer exists in American amateur regulations.

You are advocating use of what the FCC rules call a a self-assigned
indicator which is allowed before or after the call sign or not used
sat all at the option of the operator. It is ALLOWED. but not
REQUIRED.

In the U S of A, what is not required by the rules cannot be
required - it's optional on the part of the operator. I choose not to
use it.

Doesn't always mean what it may appear. Example: He gets her to do all
the paperwork and handle all the budget headaches, while he hits the
ATM for spending cash.

> But, my experience sees a lot of women who
> have to ask if they can spend money.

That door swings both ways!

Careful listening will often ferret out the info. Like getting into a
discussion about where people went to school.

> Heck, I'm certain there's some folks whose husbands would have

If it's that dangerous a place to live, and the ladies need that much
protectin', then maybe the menfolk shouldn't be going off huntin' so
much.

I think the real issue is ya might make some money at it...
>
> > > b) a woman to beat,

If you'd been going out that way before you met him, what suddenly
made it so much more dangerous?

Perhaps he was afraid you'd meet somebody else, and it would be his
manly duty to rassle the guy fer ya.

Which is waht "dating" is supposed to be all about, I think.

> For instance,
> if something really, really means that much to me--no matter what it is--I
> don't want to have to negotiate.

Too bad, because negotiating is part of any relationship. Even if you
get 100% of what you want.

> I want my husband to have the faith and
> understanding that I am compassionate, understanding, and respectful enough
> to make the right decision--but understand that sometimes that right
> decision is for me first and us second. Same way for him.

Which just means there are things you value more than the
relationship.

> Now, before you
> go off thinking I am being really ridiculous on that, here's an example:

> understand that he may not like it, but it is his fear of my not coming back
> that he doesn't want me to go.

Ah - let's hold it right there.

What he's opposed to, then, is not your taking a space trip, but
rather the risk involved.

Looking at the history of Americans in space, the risk is pretty
binary - either you come back alive or you don't. In fact, either the
whole crew comes back alive or nobody does. Not much middle ground,
huh?

> To me, the risk of not coming back does not
> weigh much against the absolute once in a lifetime chance of gazing down on
> this Earth from out there.

Understood!

I'd toss in some other factors, though. If you had little kids or
others who were relying on you, it could be argued that taking
avoidable risks is irresponsible. But once the kids are grown and
gone, it's a different game.

> I could not let "us" be the weighting factor...I
> would go--*with* the perfect understanding that he may not want to be
> married when I get back.

But if you DO get back, the risk is over, because you said it was a
once in a lifetime thing. And if you don't get back, it's rather a
moot point.

Still, your basic point is well taken: Not everything is negotiable.
Some things are deal-breakers (or relationship-breakers, if you will).
>
> Hmmmm, that's a really weird example, but I hope it's illustrative.

No offense, but to some people it might sound like you want to have
your equality and special perks too. Example: Seems like you want
equal pay for equal work, but at the same time "he" is expected to pay
for things like dates.

See the apparent contradiction?

>I am angry at *anyone* who thinks they should rule.

That I can agree with!

There ya go.

Here's a big generalization for ya:

Many men get married thinking nothing's gonna change, and are
disappointed when things do change. Many women get married thinking
they're gonna change things, and are disappointed when things don't
change.
>

> If I go on vacation to KP2, should I change my call?

No, just have a courtesy to sign /KP2. Is that so difficult?

> That's the only way I
> could comply with your mythical "DXCC prefix system".

??? My mythical "DXCC prefix system"? You're joking, right? I mean, the DXCC list with its separate prefix entries for KH1, KH2, KP2, ZS8, ZC4, ZD8, VK9X and dozens (if not hundreds) of others has been used for decades. Now all of a sudden there's a mysterious tendency to ignore it. Why?

> Just as easy to glom
> on to a temporary 1x1 special event callsign like these guys have done.
> What's the harm?

The "harm" is in the fact that if every ham radio operator in the world followed the same principle just because it was legal, very soon we would be flooded with nothing but generic callsigns, unable to tell who's working from where, and the only thing we would be able to tell from the callsign would be which country's administration issued the call. That's the harm. I don't see anything wrong with the DXCC assigned prefixes, they work nicely, so why change for the sake of change? Just because everybody's on the Internet and is able to look up the N8Z's location, this makes it OK?

The US is comprised of 18 DXCC countries, France and United Kingdom over 20 each, Australia nine, and so on. Then there's the EU which is likely to eventually adopt a concept similar to the FCC's. Now, if we have in place a system that enables us to tell a DXCC entity from a callsign, why flood the bands with generic nonsense that doesn't mean squat?

There's already a band with a similar concept and it's called CB.

At the risk of starting a flame war or some equally useless waste of time, I

suggest that not using the location indicator is poor operating practice at worst and bad manners at best, regardless of what the regulations permit.

I am a very QRP CW operator living in NE TN. It's a bit challenging for me to work the western states on 300 milliwatts and it's damned frustrating to spend an hour or more chasing what I think is a western station only to find that he's local. Two cases in point: A 6 answered my CQ and I figured I had CA in the bag -- only to find the #&^$#@! is located in West Virginia. Then there was the 7 who answered me after I spent over an hour digging around listening for a 7 -- I caught him signing with another station and called him. He was in OH. No, I said nothing to either of them about it -- just had a normal QSO and kept on looking.

Of course, I still keep an ARRL paper logbook and drive a 30 year old VW Beetle.

Dave, from the beginning of this exchange between you and I, my premise has
been that you stated "I don't believe you" to someone else about a comment
they made. I submitted the movie of a true story about [probably] the story
this person was relaying to you. I didn't endorse the movie; I didn't
critique it; I didn't state a thing other than the fact that it
existed--which is evidence enough that the story exists--but you've gone and
proved it even further with your research below. That is *all* this is
about, and you cannot make it more than that for me, because it isn't any
more than that for me.

Hell, Dave, I don't even remember much of the movie. If you want to
research it and see if it's worthy, then by all means have fun. My

submissions to you have been nothing more than the fact that your "I don't believe you" is wrong because there is a true story about which the poster was relaying.

Who cares, Dave? Why are you going off on some stupid-ass tangent about whether the research done in the story is valid or not? I simply submitted to you that it is factual that there were parents who did the research that the poster said he'd heard about in a story.

> Indications are that they have no interest in radio.

And God knows that's about all you've got, Dave. You've gone stir-crazy. Cabin Fever, probably.

> > Hey, you're the one who validated the comment about the story by saying "I
> > don't believe you." If you don't want to validate a particular portion of a
> > post, then don't comment on it.
>
> Do I need to check in with you now?

Not if I don't have to check in with you--referring to your admonishment about my posting anything in this thread. I think it just really pisses you off that you opened mouth and inserted foot.

> > It is the *only* part of the post I was
> > interested in getting involved with.
>
> So the only part which interested you is the small bit which had nothing
> to do with the matter at hand. Wundebar!

I'm not so sure that you telling someone you "don't believe them" *had*
nothing to do with the matter at hand, Dave.

> >
> > Whether you choose to see that as

I don't think I've reviewed the movie at all, Dave. I gave you its title
and website where you could look it up. Oh, did you think that was *my*
review on the website?

> >
> > Once again, you're wrong. I haven't reviewed the movie at all.
>
> ...not very well at any rate.
>
> Dave K8MN
>

Not at all, Dave, and I don't think you can submit anything that shows I
did. In fact, on 12/22/02, I stated the following in a post: "I won't tell
you a thing about the movie. If you don't want to watch it, then don't. I
offered evidence that the story this person was relaying was true...since
you're such a doubter."

So, uh, Dave, why don't you just take a few moments and tell us all where it
is that I have reviewed the movie, substantiated it, or even said whether
the whole thing was worth bothering with, huh? You charlatan.

Buffler has been "regraded" to a "Resident Agency" with two agents (and no support staff) - Dave Viglione (an experienced engineer whom I've met a couple of times) and Gene Stambro, whon I do not recall meeting.

IIRC John Theimer was an engineer there - he may have been the chief - but he transferred to Philadelphia in 1980 and retired when I did.

I wish sometimes that I should have made a copy of a field roster that my former boss had from the mid-1960s when I joined the agency. It listed all the old-timers. One day in the late 80s we sat and went down the list, noting the few who were still "aboard" and where they were at the time.

Naw, it's not a dangerous place to live. These guys (I'm speaking of these
family members) are the type who like to strut and that's all it's about.
They like to imagine that their little ladies need them every step of the
way. My husband used to have a problem with me saying "I don't need you in
my life--I want you in my life." But, I'm a communicator and we've talked
and talked and spent hours getting to know each other, so he knows what I
mean by that now. He was *willing* to learn what I meant. Some spouse says
that to one of brothers-in-law and it's all over, "we're going home." LOL

I don't know. I think it's a male issue. I have noticed, and maybe I'm wrong that men are more insecure about being men down here. I mean, they'll play with the kids, change the diapers, etc. But, my husband often brings home a "chic flick" (by the way that's a term I just learned in the last bit of time) for us to watch. I've heard women at work and socially complain that their husbands would never bring home a love story.

> manly duty to rassle the guy fer ya.
> >

Yep, that's exactly what I told him. Jealousy is a control issue, and is founded in fear. I told my husband that if he could not feel as loved as he is, then we had a much bigger problem than me going out with the girls--or anyone else for that matter.

I'm not sure it's that, Jim. With me, it's more that I have every faith in
our relationship that he could go do whatever he needs to do--if it's really
that important to him. I might not like it and I might be miserable while
he's doing it, but I'd respect his desire and I would not want to be
responsible for keeping him from doing something that important.

Oh, sorry. Well, "going to bars" isn't all that great an example, but I am
more the person who goes out (shopping, meeting friends at Starbucks, going
to movies by myself or with other people, etc.) than he is. He runs around
town all week while he's working and I am cooped up in an office. So,
weekend comes and I just ready to charge. He stays home, I go out. BUT,
that's only after a few years of learning each other.

> >

No, not really. In fact, I wish the economy would allow for me to have a traditional relationship--one I prefer. I would love to have dinner on the table, get up in the morning and fix my husband dinner, etc., you know, the way it used to be. And, on dates, nope. I have a separate little account that I put a very insignificant amount of money into with each payroll period. If I choose to save up, I do and if I choose to spend, I do. I often pay for our dates, dinner, etc. Heh heh, often it's the only way I can coax him out....LOL

> > See the apparent contradiction?
> >

I didn't realize I was presenting a contradiction. Bottom line, for me, is: women who "make it" life are often prone to have extreme ego about the fact that they made it because they are a woman. I have never had that kind of feeling. I make my way in life because I work at it and don't think I am at any more a risk of not making it than a man. I thnk women who concentrate on that as a barrier often make their own paths, but you'd never hear them admit that.

I wouldn't even be surprised to hear you are a monastic(?) monk. By the way, my favorite place as a teen-ager, and one where I really learned a foundation of things I believe today, was at New Skete Monastery in Cambridge, NY. The Brothers and Sisters were incredible people; and I was always allowed my questions.

Brian, all the evidence presented in this newsgripe would suggest that
you are, indeed, a jerk! One of the things that jerks do is make blind
judgments about people! To claim that I'm a jerk on the air, without
ever having had a QSO with me, in itself causes you to be suspected of
being a jerk -- if not providing indisputable of same! Where do you get
off making such gratuitously disparaging remarks? Oh, never mind --
I remember now -- you're a no-coder. I should have expected this.

Once upon a time, FCC required that one's call match the call district, and you had to sign with portable or mobile identifiers if you were away from the station location on your license. Some hams had a whole slew of callsigns in a short span of time because they moved around a lot.

Should we go back to that system? It was abandoned (in part) so that hams who moved wouldn't have to change their callsigns. And it was abandoned at least 25 years ago.

73 de Jim, N2EY

(I kept my 2-land call when I moved from NY back to PA in 1979. Reason: Back then, if I'd given it up, it would not have been reassigned to another ham).

> Why?

Quick perusal of QSL boxes yield the following:

KB6 (Baker), KJ6 (Johnston), 9S4 (Saar), I1 (Trieste), 1Z4 (Norhday Island).
Hmmm ... here is another: KA2SK ("King Arthurs Two Small Kids") (Japan).
KA6IJ (No, it's not California)
VP6 (Jamaica). Won't even bother with all the other Carribean changes :-)
UQ2 (et al)
DL (The entity changed, prefix did not).
KS4 ... three of them, all different DX entities at different times.

(Babble mode on)

There never has been any "DXCC prefix system".
Just a long list of Prefix - Start date - End date - Entity Name

Don't get me started on Zones ... CQ and IARU e.g.

States, provinces, prefectures, regions, et al. Same problem.

(I'm in the process of creating a database schema to represent the
relationships between a geographic place, the prefixes used for
ham radio licenses in that place, the dates those prefixes were valid,
whether the prefix was authorized by local authority, the DXCC
entity assigned to that geographic place at that time, etc. etc.
Is a major worm can.)

Now where did I put that VS1 (I mean VR2) QSL?
Oh, never mind. VR2 used to be somewhere else.

ZE? Or is that Z2? or is it one of the tribal-lands prefixes in use
for only a short time? Or were those parts of South Africa?

At least the I1BNU card is quite clear - it ain't Italy :-)

That's what a call sign is meant to be by international regulatory practice. Neither the ITU nor the FCC give a flying fig for the arbitrary "DXCC countries". We are darned lucky that the FCC will issue 1x1 special events call signs at all.

On the US of A at least nothing prevents adding the optional self-assigned indcators by those who want to play the DXCC game.

>The US is comprised of 18 DXCC countries,

EX-CUSE ME? The US is one country. DXers may consider it to have 10 different places for DXCC credit, but it is ONE country for radio regulatory purposes.

>There's already a band with a similar concept and it's called CB.

It's just a survey put out by some bored people anddesigned to yank some people's chains. I swear, hasn't everyone in this hobby weighed in on this subject by now? I put in my 2 cents on this survey- I'm one of the odd ones out. I don't take a stand on this subject either way, because I don't know enough about using CW yet to judge its usefulness one way or the other.

I can say that I now know CW... at least, I can copy/send very well at 7.5 WPM. I'm sure there are some readers here who're chuckling under their breath about that. They are obviously too old and/or brain dead to remember when they were beginners. No names or callsigns- you know who you are, trollers.

Exactly - this "long list of [criteria]" is what makes a system.
Therefore, if there has been "a long list of [criteria]", that means
that there has been a DXCC system in place that has worked fairly well
so far.

I'm quite aware that I've worked only 170 countries on 10M SSB. And
I'm quite aware that I've ragchewed with what you would call rare
ones. The only problem is that they were in the neighborhood, they
had the time, I had the time.

So what's you're problem? Do you intend to dictate to Mongolia and
Malaysia your DX paradigm? Knock yourself out. Pffft.

> > I have a (sponsored) RCC

I don't know why we're "lucky" for this, but my complaint addresses the indiscriminate usage of such calls from the DXCC entities whose prefixes do not correspond to the calls in question.

> On the US of A at least nothing prevents adding the optional

"N2EY" <n2ey@aol.com> wrote

: Once upon a time, FCC required that one's call match the call district,
and you
: had to sign with portable or mobile identifiers if you were away from the
: station location on your license.

Worse than that was the infamous FCC rule &#65533;12.91(a) which required us to send written notification of any mobile or portable operation in excess of 48 hours away from our "fixed transmitter location". Such notification had to include the date/duration of portable/mobile operation, the contemplated location for portable operation, or the detailed mobile itinerary. The notification had to be renewed in writing each additional month of such operation.

Many of us in the military, to preserve our original "home" call sign, just applied for "additional station" licenses for our current location. This allowed us to keep our home call and avoid the tedium of sending a 12.91(a) letter each month (or get cited for no 12.91(a) notification on file).

Yes, Virginia, it was Part 12 back then, not Part 97.

Thankfully all that rigmarole is long gone, and my callsign is legal anywhere in the USA and possessions without tacking on awkward suffixes/prefixes, notification letters, and other anal retentive folderol.

Um ... yes ... I just agreed with you, but also pointed out that
things are not simple now, have not been simple in the past,
and will not be simple in the future. The reason is obvious:
DXCC entities (or WAE countries or CQ zones) are not something
the licensing authorities care about, or usually even know about.

"Real DXers" (TM) work 'em first and sort 'em out later.

Been that way for the 49 years I've been chasing DX, don't
expect it will change.

I hate when people keep their callsigns when they move outside of their
call area, and I curse them under my breath every time I mistakenly work
them. :) But the rules are the rules and people like Phil are just
making it more interesting by keeping me on my toes.

Like it wasn't hard enough already. But if it was too easy, I'd get
bored as well. Oh, I am so conflicted. :)

I've proved what, Kim? I followed a link provided by you and quoted
from same indicating that the parents may not have been very good at
becoming homemade biologists. None of this, by the way, has anything
whatever to do with whether we are sheep being raped by our government.

> > >
> > > http://carbon.cudenver.edu/~bstith/loren.htm

I quoted a rather lengthy bit of information from the link provided by
you.
That information indicates that the homemade biologists who have nothing
to do with whether we are sheep being raped by our government, weren't
very good at what they did.

> you're such a doubter."

"This person" never said anything about a movie at all. We still don't
know anything factual about successful home schooling of the parents in
biology.

> So, uh, Dave, why don't you just take a few moments and tell us all where it
> is that I have reviewed the movie, substantiated it, or even said whether
> the whole thing was worth bothering with, huh? You charlatan.

Substantiated it? You've never ever substantiated anything here.

Hi there,

(Are you related to Hashifisti Scratchi, a famous ham radio columnist?)

My original callsign was KG6AQI which I lost when I left Guam for "the world". I wonder if the current holder (in California) gets "hated" when folks find out he doesn't live in North Tipalao which was my town when I held the call.

That might be ethnocentric if the ARRL were an ethnic group. It isn't. For me to "still think" that ARRL owns DX, I'd have to have once thought it. I haven't. The ARRL owns DXCC. Don't like it? Start your own awards program which will be accepted by radio amateurs worldwide as the standard.

Maybe we can get you and Vipul straightened out over time.

Gee, Kim. Don't you have something more useful to do? Such as laundry,
cooking or mopping floors? Now that your child-bearing days are over you
should have ample time for such mundane chores.

> on one.

Actually, I don't think USVI is part of the USA, it's a US territory, which isn't the same thing. The USA is only the 50 states plus DC. Then there is Puerto Rico, which has 'commonwealth' status, where it is etiher a state or a territory. Nobody is saying that they are not under FCC jurisdiction, or that you have to use /KP2 when in USVI, only that it is good operating practice to do so, but apparently even that is too contentious for some. For the record, I did sign N3KIP/KP2 when I visited USVI.

Someone in the thread said (a couple of times) maybe things are different in the UK. Well, they are, very different. The UK callsign system uses transferrable prefixes, which involves a lot of redundancy between callsigns. For example, G8VUK in England becomes GW8VUK in Wales and GJ8VUK on Jersey, as only one of these calls is issued. Most people get confused when talking about England, Britain and the UK, each of which is different. This even confuses some British people, but just remember that England is only a part of Britain and that in turn is only the mainland of the UK. The country (not for DXCC, but politically) is called the UK or United Kingdom. The mainland is called Britain or Great Britain, and is divided up into England (G, M, 2E), Scotland (GM, MM, 2M) and Wales (GW, MW, 2W), each of which is still referred to as a 'country' (not just for DXCC), because they used to be separate countries. The other parts of the UK (which are not part of Britain, although the people are still British) are Northern Ireland (GI, MI, 2I), The Isle of Man (GD, MD, 2D) and the Channel Islands, which for ham radio purposes are divided up into Jersey (GJ, MJ, 2J) and Guernsey (GU, MU, 2U), although there are two other jurisdictions in CI, called Alderney and Sark, but they come under Guernsey as far as the prefix goes, and also for DXCC. Each UK prefix is a separate DXCC entity, but this is because they were grandfathered, not because they meet the criteria.

The UK also has territories, but they have separate prefixes, and radio is not administered in them by the RA, so even someone with a UK licence needs a reciprocal licence. In the Carribean there are Anguilla (VP2E),

Montserrat (VP2M), the British Virgin Islands (VP2V), the Turks and Caicos Islands (VP5) and the Cayman Islands (ZF). Then you have Bermuda (VP9) and you also have on that side of the atlantic VP8, which covers both the Falklands and the British Antarctic, which itself also includes islands that are separate DXCC entities (South Sandwich, South Georgia, South Orkney and South Shetland, I think, all uninhabited), but there's no way to separate the different VP8 DXCC entities from their calls. On the other side of the Atlantic there are St Helena and Tristan da Cunha, which use the ZD prefix. You can separate them as DXCC entities, because they use different numbers in the call, although I always forget which is 7 and which is 8. The British base at Akrotiri in Cyprus uses the ZB prefix. There's also Chagos/Diego Garcia (VQ) in the Indian Ocean (a US base, but a British territory). I think that's all that remains of the British Empire, that I can remember.

I just got a QSL from KA2MBR who resides in Puerto. Perfectly legal call, and he announces his location whenever he makes QSO's.

What about those special event prefixes in the UK (ie GB2, GQ3, etc.)?...there's no clue as to where they are...could be GM, GW, G, etc.

Yup. And they had to be sent to the district offices. Even, a long weekend at the lake or shore required written notification.

Whole system is a bunch of tradeoffs. Under the old system, a ham who retired to a different call district had to give up the callsign he/she'd held for decades. Was that a good thing?

The UK system works for them because they have fewer than 50K hams.

Here's another thing to rant over, folks:

In the bad old days, the suffix of a ham call was always longer than the prefix. Only real OTs had 1x2s, etc. Shall we go back to that system?

That's interesting. I always thought the democratic process to be the ultimate instrument of "fairness." I've heard some argue that it shouldn't be limited to already licensed ARO's. Fine, open it up to EVERYBODY. Those "interested" can cast their vote, those who are not interested need not apply. That way the, "potential" hams aren't left out. Either way, upon tallying up the ballots...the conceding proponents (No-code OR Pro-code) finally shut up for good.

I think it's allot more than that. I think it's some folks frustrated that
they cannot get a "federal bureau" to listen to the will of the people. BTW,
that's "inherently" unconstitutional. Remember, there's already a no-code
ticket so the code is no longer a "barrier" to AR. Hasn't been for years.
Folks are just angry and frustrated that an (Not THE!) important part of
AR's rich tradition and a "rite of passage" is being eroded away in the name
of "making it easier."

Amateur Radio Newsline™ Report 1323 – December 20, 2002

Amateur Radio Newsline report number 1323 with a release date of Friday, December 20, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Newfoundland joins the 5 megs experiment and Guam's ham radio community is reported safe following a super typhoon. Find out more on Amateur Radio Newsline report number 1323 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO TECHNOLOGY: NEWFOUNDLAND JOINS 5 MEGS EXPERIMENT

The 5 megs experiment is growing once again. This, as hams in Newfoundland come on board to try their hand at propagation on what may wind up as a future ham radio band. Jeramy Boot, G4NJH, reports from Nottingham in the U-K:

--
VO1MRC, the Marconi Radio Club of Newfoundland club station, has received experimental authorization to transmit CW and upper sideband on seven spot frequencies around 5.3MHz for three four-day periods.

The next session is from the 20th to 23rd of December inclusive and the frequencies that VO1MRC can use are 5260, 5269, 5280, 5290, 5319, 5329 and 5400kHz. The experiment is to look at the differences in ground wave and sky wave propagation on 3.5, 5.3 and 7mhz.

Jeramy Boot, G4NJH.
--

The original 5 megs experiment began several months ago in the UK. It required British hams to get special temporary authority to use the band. The experiment proved so popular and so many hams applied that British telecommunications regulators had to put further permits on hold until they could reassess the impact to the band. (GB2RS)

**

RESCUE RADIO: SUPER-TYPHOON HITS GUAM - HAMS AFE AND OPERATING

Reports over a popular ham radio website that the territory of Guam was hit by a "Super Typhoon" on Sunday December 8th. And while no stations from Guam have been heard here in the United States, reports over the Internet say that everyone is O-K. We have more in this report:

--
Duncan Campbell, KF6ILA portable KH2 lives on Guam. He says over the QRZ

website that the typhoon packed sustained winds of 160 miles per hour with gusts topping 190 miles per hour.

News reports pick up from there. They say that the storm damaged much of the island's infrastructure including electrical power and knocked out wired and cellular telephone service. And Campbell’s posting adds that along with the loss of electricity and water, the port of Guam was the scene of a major fire that destroyed the reserve tanks of fuel used across the island. The blaze started during the storm and the island is now low on gasoline. He says that the sale of the remaining fuel is restricted to emergency vehicles only.

With the clean up now underway the good news is that all the Amateur radio operators on Guam are believed to be safe. Campbell says that several hams are known to have lost their antenna systems and the islands only repeater was also blown off the air. This, the result of the collapse of a nearby cellular telephone tower striking it as it fell.

KF6ILA says that some hams are already back on the air handling post storm related communications. All operation is on the high frequency bands centered near 14.310, 21.375 and 28.520 MHz. Another frequency -- 7.085 MHz is supposed to be used for emergencies but so far no stations have been heard.

By Sunday December 15th, Andersen Air Force Base and part of hotel row in the town of Tumon had power restored. But news reports say that other parts of Guam could remain blacked out for a fairly long time. And even though its almost two weeks since the storm hit, if you hear ongoing emergency or storm related communications please give it priority over any other use you might have for the frequency.

For the Amateur Radio Newsline, I’m Graham Kemp, VK4BB, of Q-News Australia.

--

A little more information comes from the Guam Pacific Daily News. It says that that the Red Cross and Salvation Army are on Guam providing post typhoon relief. Also, that the Red Cross service center has already processed over 200 requests for disaster assistance.

Meantime, another poster to QRZed says that he arrived in port at Guam on December 14th. N6HPX says that the repeater is back up and operating on 146.91 MHz, but there is nobody on the air using it. (QRZ, Q-News, others)

**

RESCUE RADIO: NEW SALVATION ARMY STATION

Speaking about the Salvation Army, word that it and the Oklahoma City Autopatch Association hosted the grand opening of the Salvation Army Emergency Communication Center. It took place in Oklahoma on Saturday, December 14th. The new center is located at the Salvation Army Citadel on SE 44th Street in Oklahoma City.

Frank McCollum, N5FM, the station trustee, held the first net from the new facility at 9 am. McCollum helped to establish the first station in 1986, at

The Salvation Army's Arkansas Oklahoma and Divisional Headquarters where it remained until two years ago.

The new station features very modern gear. It is designed to allow multiple High Frequency, VHF and UHF stations to provide ongoing communications services at the same time. (WA6LBU)

**

ENFORCEMENT: FCC CLEARS CT TESTING

Turning to enforcement news, the FCC has closed the books on its audit of a Connecticut VE testing session. The good news is that no violations of any rules were uncovered. The FCC’s Daryl Duckworth, NN0W, explains:

--
Duckworth: “The Enforcement Bureau has informed the ARRL that it has concluded its audit of the Trumbull Connecticut test session of May 10 2001 and found no wrong doing by the VE’s. The Bureau cautioned the ARRL however, that when the number of VE’s exceeds the number of test candidates, control and supervision of a test session is more complicated.”
--

The FCC says that all ten V-E’s did follow proper procedures while administering the exam. It also thanked them for their cooperation in resolving the matter. (FCC, RAIN)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WA6BAI repeater serving Visalia California.

(5 sec pause here)

**

SPECTRUM ISSUES: REVISED 6 METER BANDPLAN IN SERA TERRITORY

The South Eastern Repeater Association’s Repeater Journal says that there is a revised 6 meter bandplan in place for repeater operation in states that it oversees. Under the new plan the 15 repeater pairs using 2.51 MHz offset have been eliminated. This is because the outputs of the 2.51 MHz spaced repeater pairs fell on the 20 Kilohertz spaced channels from 53.71 to 53.99 MHz.

The South East Repeater Association says its goal is to simplify the bandplan for 6 meters. The revised plan calls for 15 repeater pairs using 500 kHz offset and 20 kHz spacing with outputs from 51.70 to 52.92 MHz and 39 channel pairs using 1 MHz offsets and 20 kHz spacing outputting between 52.01 to 53.99 MHz. The few repeaters originally coordinated using the 2.51 MHz offset are being grandfathered and allowed to continue operation under the old system.

The South Eastern Repeater Association is one of the nations largest all-volunteer repeater councils. It provides coordination services for repeaters in Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee, Virginia and West Virginia. (SERA Journal)

**

SPECTRUM ISSUES: ADDITIONAL BANDS FOR UNLICENSED DEVICES

The FCC says that it is seeking comments on the possibility of permitting unlicensed transmitters to operate in additional parts of the electromagnetic spectrum. According to Bob Gonsett’s CGC Communicator, the regulatory agency specifically wants comments on the feasibility of allowing unlicensed devices to operate in the TV broadcast spectrum.

But that’s not all. CGC says that the Commission is also looking for comments on the feasibility of permitting unlicensed devices to operate in other bands and at power levels higher than other unlicensed transmitters. The FCC believes that advances in computer technology make it possible to design equipment that could monitor the spectrum to detect frequencies already in use. This says the FCC would ensure that transmissions only occur on open frequencies. So far, no Amateur Radio service frequencies have been specifically targeted by the proposal.

More on this issue is on the FCC website at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-229400A1.doc (CGC Communicator)

**

SPECTRUM ISSUES: NEW BANDS FOR EMERGING TECHNOLOGY

Also from the CGC Communicator comes word that the FCC has allocated 90 MHz of spectrum for advanced wireless services. The bands in question are from 1710 to 1755 MHz and from 2110 to 2155 MHz.

The FCC indicates that this spectrum could be used by current cellular and PCS licensees to expand their capacity by offering wireless voice and data services such as 3 G. Or it might be used by others to support the development of entirely new applications that are distinct from existing offerings. Either way, the FCC is seeking comments on licensing, technical, and operational rules.

More is on the web at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-228237A1.doc (CGC Communicator)

**

NAMES IN THE NEWS: ROCK STAR GIVES MAJOR DONATION TO ARRL BIG PROJECT

Some good news on the ham radio education front. The ARRL Letter says that rock entertainer Joe Walsh, WB6ACU, has made a major contribution to ARRL's Education and Technology Fund.

According to the Leagues Chief Development Officer Mary Hobart, K1MMH, the significant gift through the Joseph F. Walsh Foundation. Hobart says that it will fund an additional eight pilot schools in the ARRL Education and Technology Program.

Walsh is best-known as a guitarist, vocalist and songwriter with The Eagles and The James Gang. He has been an active Amateur Radio operator for more than 37 years, is an avid collector of vintage radio gear and a longtime friend of Heil Sound's Bob Heil, K9EID.

The amount of Walsh's donation was not made public. An up-close and personal profile of WB6ACU appeared in the November issue of C-Q Magazine. (ARRL)

**

NAMES IN THE NEWS: REPEATER COORDINATION PIONEER NAMED NEVADA SM

A ham who helped to pioneer repeater frequency coordination in Southern California has been named as the new ARRL Nevada Section Manager. Amateur Radio Newsline has a look at Dick Flanagan, W6OLD.

--
Dick Flanagan, W6OLD, is replacing Jan Welsh, NK7N as Nevada Section Manager. According to an ARRL release, Flanagan, a resident of Minden Nevada was the recipient of the ARRL 2000 Excellence in Recruiting Award and was active in the successful effort to secure an Amateur Radio antenna bill in Nevada. But long before that -- back in the early 1970's, W6OLD started his ham radio political career while still a resident of Los Angeles California.

It was in 1971 that W6OLD helped to create the famed Southern California Repeater Association or SCRA. He also served several terms of office with that group. And it was during his tenure that SCRA pioneered many innovations in the area of repeater coordination and dealing with the FCC on repeater related issues. And under Flanagan's leadership the SCRA worked out a frequency sharing scheme with Baja California Mexico that still remains in force -- essentially as negotiated -- more than two decades later.

Since moving to Nevada W6OLD has held a number of positions in the ARRL Field Organization. This includes ARRL Official Observer, Official Emergency Station and ARRL VEC volunteer examiner. Most recently he has also been serving as an assistant Section Manager.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The ARRL says that Welsh is stepping down at the end of the year for personal reasons. (ARRL, SCRA Archives)

RADIO REMEMBERS: STAMP COLLECTING OPERATORS

The Radio Stamp Operators Group reminds us that a year ago, on November 15, 2001, the Japanese Postal Service released an 80-yen postage stamp honoring the 50th anniversary of commercial radio and TV in that country. The stamps depict the images of the microphone used when commercial radio broadcasting began, the first monochrome television camera used for commercial television broadcasting, and at television set up for street viewing. More information on radio stamp collecting is on yahoogroups at radiostamps@yahoogroups.com (RSG)

THE ARNEWSLINE SUPPORT FUND REPORT WITH N6TCQ

Ladies and gentlemen, the administrator of the Amateur Radio Newsline support fund, Andy Jarema, N6TCQ:

--
With the holiday season upon us, I need to ask you to add one more name to your gift list. Of course I'm referring to Amateur Radio Newsline.

Without going into a bunch of numbers that will bore you, let's just say that we will end the year with a deficit and it will grow in months to come. That is unless you, the Amateur Radio Newsline listener step up to help.

What we need is immediate support so we can pay the back bills and ongoing support to prevent any back bills. And only you can make it so.

Remember, Amateur Radio Newsline is a federal 501 (C)(3) not for profit orporation and donations to it are tax deductable. This is an excellent way to do some end-of-year "window dressing" on your personal or club's taxable income.

The address is the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California. The zipcode is 91066.

If you missed that address don't worry. It will be repeated in the close of this weeks report.

Andy Jarema, N6TCQ

--

Thanks Andy. (ARNewsline Support Fund)

**

EMERGING TECHNOLOGY: BOSTON TV STATION DISRUPTS POLICE SYSTEM

A Boston-area TV station's new 24-hour-a-day digital transmitter is disrupting Camden County New Jersey police communications over 100 miles away. Amateur Radio Newsline's Ken Locke, N8PJN, fills us in:
--
The South Jersey Courier-Post newspaper says that twice last summer, the new digital transmitter used by WCVB in Boston Massachusettes interfered with field communications to Camden County's communications headquarters in the town of Lindenwold. The town's leaders want the problem to go away.

By way of background, WCVB began broadcasting its Federally mandated digital television signal on Channel 20 in 1998. But the problem in the currently shared 506 through 512 megahertz band did not show up in Southern New Jersey until this year. In January WCVB began full time, round-the-clock digital programming. A summertime conditon hams call tropospheric ducting is being tabed as the cause of the interference.

A duct acts kind of like an R-F tunnel from one geographic area to another. This one is putting South Jersey in Boston's back yard and vice versa during the warmer months of the year.

Engineers seem to agree that the police or the television station will have to move frequency. The big question is which one will make the change. New Jersey Congressman Rob Andrews met with county representatives and is now working to arrange a meeting between them and the FCC in Washington. They want the station to move.

But some consultants and communications lawyers feel it will be the county thats told to change frequency. They say that broadcasting is mandated the spectrum on a primay basis.

For the Amateur Radio Newsline, I'm Ken Locke, N8PJN.
--

The bottom line. This one looks as if it could become a political football for the FCC. (South Jersey Courier-Post , Portland SBE, KB4KCH, others)
**

HAM RADIO IN SPACE: SPACE STATION ACTION PLAN APPROVED

The leaders of the five space agencies that are partners in the International Space Station have approved a new operating plan for the orbital outpost. Meeting in Tokyo Japan, the group has approved. Among the more important items to Amateur Radio is increasing the number of permanent crew members so that research projects can proceed more swiftly. More people on-board the ISS means an increased chance or QSO's.

Right now, with limited crew resources of three Astronauts research takes a back seat to construction aimed at completing the orbital station. By 2006 that number is expected to at least double if a method of emergency evacuation can first be worked out. The current escape vehicle which is mandatory to ISS crew deployment can carry only three. (Adapted from published news reports)

**

INTERNATIONAL - CANADA: ONTARIO SM RE-ELECTED

On the International scene, Radio Amateurs of Canada reports that Robert McKenzie, V-E-3-S-J-Q has been re-elected Section Manage of the Canadian Province of Ontario. His next two-year term begins on March 1st.. McKenzie ran unopposed eliminating the need for a balloted election. (RAC)

**

INTERNATIONAL-CANADA: LICENSING RECORD UPDATE

Records maintained by Industry Canada and Radio Amateurs of Canada show that the Canadian callsign database is becoming corrupted by inaccurate information. Radio Amateurs of Canada says that one of the prime reasons for this is the failure of some Canadian Radio Amateurs to advise the licensing authority of address changes.

The rules in Canada that the holder of an Amateur Radio Operator Certificate shall notify the Department within thirty days with respect to a change of mailing address. Unfortunately, this does not appear to be happening in all cases. (RAC)

**

INTERNATIONAL - SOUTH KOREA: INVESTING IN THE WWW

South Korean telephone companies plan to invest the equivalent of $10.9 billion in U-S dollars in broadband networks by 2005. This, as a growing number of people in that nation demand access to high-speed Internet services.

In making the announcement South Korea's Ministry of Information and Communication did not provide breakdowns of the investment plans. It did note that South Korea boasts having the world's highest Internet penetration with more than one fifth of the population having access to high-speed Internet services. (News release)

**

HAM TESTING - SOUTH AFRICA: ZS EXAM SUCCESS

And talk about high exam scores. The South African Radio League has announced that during the October 2002 Radio Amateur Examinations that four candidates achieved the first place in the test. SARL says that each of these applicants emerged with an average of 99% in the overall exam. (SARL)

**

INTERNATIONAL – UK: FOUNDATION LICENSE PARTY

The United Kingdom plans to celebrate the first year of its new Foundation Class license with a big on-the-air QSO Party. The Foundation License for 'QSO Party' for M-3 prefix licensees and their friends on the 1st of January 2003 from 10:00 and 15:00UTC. Operations will be on 40 meters around 7.070 MHz, plus or minus any QRM. (RSGB)

**

DX

In DX, word of a new station on from the Sudan. His name is Marco. His call sign is ST1MN, and he is reportedly will be active on all of the High Frequency bands through the end of June 2003. (RSGB)

Also, VK8AN will be active as 4W6AN from Dili, East Timor. This, from around the 19th of December through the end of the year. Due to limited notice he will only be running about 15 watts to a dipole or groundplane antenna. QSL only via VK4AAR. (Via e-mail)

**

THAT FINAL ITEM: THAT FINAL ITEM: STAR TREK -- HERE WE COME

And finally this week a story about the ultimate form of communication. About sending yourself electronically to anyplace you might want to go. Bill Pasternak, WA6ITF, has the far out story of science fiction on its way to becoming science fact:

--
As incredible as it may seem, a Star Trek like transporter may be a step closer to reality. This, after physicists in Denmark make two samples of trillions of atoms interact at some distance.

The experiment involved a science called quantum entanglement. This is a mysterious theory of a controlled spiraling of two or more particles without any physical contact. Scientists say that these entangled states are needed for quantum computing and for teleportation.

Before the team at the University of Aarhus made its breakthrough other scientists had successfully developed entangled states of a few atoms. But the scientists in Denmark have now done it with very large numbers.

At the moment nobody is about to teleport anyone, anywhere. But the research, which was reported in the science magazine Nature makes the idea of instantly transporting an object from one place to another less far fetched.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF.
--

We know you are waiting for the obvious tag line, so we won’t disappoint you. If all goes well, maybe the term “Beam me up - Scotty” will be reality in our great, great, great grandchildrens lifetime. The only question is whether or not a 5 word per minute code test will be required to “communicate” using that rather exotic mode. (Future Technology)

Amateur Radio Newsline™ Report 1324 – December 27, 2002

Amateur Radio Newsline report number 1324 with a release date of Friday, December 27, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio responds to a Southern California gas leak and interference issues are front and center with the FCC. These stories and more come your way on Amateur Radio Newsline report number 1324 beginning right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAMS RESPOND TO SOCAL GAS LEAK

Ham radio is there to provide communications as a gas leak hits Huntington Beach California. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the rest:

--
Glorria Morrison, KE6ATG, is the Huntington Beach California Fire Department Emergency Services Coordinator. She was in the process of briefing the new Police Chief, Kenneth Small, on routine procedures on Wednesday, December 11th when the meeting was interrupted by a report of a natural gas leak. Nine fire companies were assigned to the incident. Public Works and Police Department personnel were also sent to the scene.

First order of business -- a near-by 55-unit apartment complex had to be evacuated. Fire Battalion Chief Jacques Pelletier requested that a Care and Reception Center be set up for displaced resident. Huntington Beach RACES was soon activated. It established a net and began logging-in availability of members for the response. 20 RACES made themselves available.

Meanwhile, a call was made to the Community Emergency Response Team Shelter Leader to activate five volunteers for service at the Care and Reception Center location. Tim Sawyer, WD6AWP, acted as net control operator. Huntington Beach RACES Chief Radio Officer Steven Graboff, W6GOS, responded to provide Amateur Radio, cell phone, Red Cross and fire radio communications. Other RACES operators were deployed to the Emergency Operations Center and the Fire Incident Command post at the gas leak scene.

Within 90 minutes the incident was over. The shelter was closed down and the residents went home. No injuries to the firefighters or the RACES volunteers were reported.

For the Amateur Radio Newsline, I'm Bruce Tennant., K6PZW, in Los Angeles.

--

RACES communications was utilized exclusively throughout this event because the city’s cellular telephone system was not working at the time. (KH6WZ)

**

RESCUE RADIO: ARES ASSISTS FOLLOWING MISSISSIPPI TWISTER

The ARRL Letter says that Amateur Radio Emergency Service teams from Jackson and Meridian Mississippi converged on the tiny community of Newton last week. This, to provide emergency communication following a devastating tornado on Thursday, December 19th.

The mid-day twister struck a Wal-Mart filled with holiday shoppers, blowing out the front windows and collapsing part of the roof. The tornado also damaged a furniture factory. According to news accounts, some 70 people were hurt, but no one was killed. Property damage in the town was said to have been widespread, and Governor Ronnie Musgrove has declared a state of emergency in Newton.

According to Mississippi Section Manager Malcolm Keown, W5XX, about a dozen amateurs from the Metro Jackson ARES and the Lauderdale County ARES groups turned out. They took turns supporting relief agencies in Newton which has no ARES organization of its own.

Keown said the ARES teams helped the Red Cross with damage assessment and with shelter communication. Hams also assisted the Salvation Army and the Southern Baptist Men's Kitchen canteen operations as well as making themselves available to local emergency management officials.

In the tornado's immediate aftermath, telephone service and electrical power were out in much of the town of nearly 4000 and in surrounding Newton County. (ARRL)

**
RESCUE RADIO: GUAM SUPERTYPHON - THE AFTERMATH
An update on the recovery effort on Guam following a typhoon that hit the island on December 8th. As reported last week, the giant storm packed sustained winds of 160 miles per hour. It damaged much of the island's infrastructure knocking out electrical power and all telephone service. Now the inhabitants of Guam are slowly digging out. We have this report:
--
By far the best source of what happened during and after the typhoon has been Duncan Campbell, KF6ILA portable KH2. He lives on Guam and survived the storm. He has also been posting regular updates to the QRZ.com website.
Campbell gives a reason why one key Guam station was off the air. He says that on Wednesday December 11th the high frequency ham station on the Naval Station from where he was operating was ordered to shut down because fuel to run generators that supply electricity was running low. The supply of fuel returned to normal on December 17th. Also, water and power is now back on at his home and there is some telephone service but long distance is still spotty, but life is stating to get back to normal.
One thing KF6ILA does not cover in his QRZ.com posts is why most other Guam

based stations have been off the air since the typhoon hit. But news video from the island pretty well covers that. The pictures show that the devastation was very wide spread. Its more than likely that antennas simply got blown away.
As far as medical services Campbell says that a military Field hospital from San Diego has been set up outside of Guam Memorial Hospital. He says its here to relieve the strain on both of Guam's regular hospitals. Both were damaged in the typhoon.
Finally, Campbell says that that he is now back at work and that there is a lot of post typhoon restoration taking place. That added to the times when the high frequency bands are open to the U-S mainland means that he has not been able to keep scheduled contacts.

Reporting from Auckland New Zealand, I'm Jim Meachen, ZL2BHF, for the Amateur Radio Newsline.
--

Another ham on Guam -- Don Palko, N7GZA -- adds to the story. He says that he was with KF6ILA when he was trying to maintain communications with the mainland U-S. He says hat it was Campbell hat brought Guam's one and only 2 meter repeater back on the air. He adds that the American Red Cross is on scene to help with the recovery and they have brought ham radio operators with them. (KF6LIA, N7GZA via QRZ.COM)

**

Break 1

Wishing you the very best of seasons greetings from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world including the 145.600 MHz repeater serving the city of Durban South Africa.

(5 sec pause here)

**

ENFORCEMENT: OLD PROBLEM - NEW SOLUTION?

The FCC is using a new diplomacy to deal with an old problem. Its telling a repeater owner that he will be held responsible if an unlicensed individual is relayed over his system. Amateur Radio Newsline's David Black, KB4KCH, has the details:

--
Wayne Curley, WA6NRB, of Montrose, California finds himself receiving an interesting warning letter from the FCC. Curley operates a popular repeater serving the Los Angeles area. It's on that repeater where the Commission alleges that Richard Burton, the former WB6JAC, has been appearing.

Burton and the FCC have a long history. Burton is a former ham who had his license revoked back in 19-81. The following year, he was convicted on four counts of transmitting without a license and two counts of making obscene transmissions.

That conviction got him sentenced to 8 years in a federal prison. But the judge then suspended all but the first six moths. Burton appealed. The Ninth District Court of Appeals threw out his obscenity convictions but let stand the charges of operating without a license. But it doesn't end there.

The Commission says that Burton transmitted without a license while on probation in 1984, 1990 and again in 1992. After a second conviction, he was fined $2000 and received a year's probation. On his third unlicensed operation conviction, he was sentenced to serve 7 months in prison and do a year on probation.

In 1992, Burton decides to try and get his ham license reinstated. The FCC says no. So he waits four years. In 1996, he passes a Technician class exam. Burton is issued the call sign KG6GKS but that license grant is short lived. As soon as the Commission realizes that the new license has gone to Burton, it sets the license aside, putting Burton off the air again, at least as a Commission licensee.

In may of 2,000, another federal grand jury indicts Burton for operating without a license. He's arrested that August. In January of 2001, Burton agrees to serve three months in jail. He does his prison time at a federal detention center near Fort Worth, Texas. Burton is also placed on one year's probation following his release -- and he's ordered to undergo psychological counseling.

Now, the FCC says that Burton is back on the air again, this time, using Wayne Curley's Los Angeles repeater. And it appears that--this time--the FCC has decided to simply give him no place to operate by holding Curley, as repeater operator, responsible for letting Burton's unlicensed signal to be relayed.

On December 4th, the FCC issued a Warning Notice to Curley. The letter reminds Curley that a repeater licensee is responsible for continuing violations of Commission rules. And it tells Curley that enforcement action against him may result if he fails to prevent violations from occurring over his repeater. The FCC says this could include fines, license suspension or even revocation if Curley fails to act.

But the FCC also gives Curley some advice. It tells him he has several options available to prevent recurring and deliberate violations of FCC rules from taking place on his repeater. This includes locking rules violators out...or using access tones...or even limiting the repeater's operation.

But the Commission also adds a warning. If he is not able to do this, the FCC says, Curley must take his repeater off the air.

For the Amateur Radio Newsline, I'm David Black, KB4KCH.

--

As we go to air its not known what enforcement action the FCC might be planning to take directly against the ex-WB6JAC. (FCC with background from ARNewsline and Westlink Radio Archive)

**

ENFORCEMENT: YOU CANT OPERATE - YOU AGREED TO A SUSPENSION

The FCC’s Enforcement Bureau has issued a warning notice to Cornwall Chan, W3CI, of Dresher Pennsylvania regarding operation on a 2 meter repeater back in November. The reason: Chan is not supposed to be on the air.

You may recall that W3CI had forfeited his license back to the Commission for a period of three years. This, in settlement of an earlier enforcement action regarding repeater interference.

Chan is supposed to stay off the air until September of 2003. The FCC says that if he shows up again before that date it will take further enforcement action against him. The FCC adds that in view of the alleged violation of its agreement with Chan that it has now dismissed his request to have his suspension period shortened. (FCC)

**

ENFORCEMENT: SORRY -- THATS NOT REPEATER INTERFERENCE

The FCC says that the signal being heard by another Ohio ham cannot be considered as interference because the ham is listening from far to high of a location. Commission spokesman Daryl Duckworth, NN0W, explains the situation and why the agency declined to get involved:

--
Duckworth: “The complaint of Kim Lozier, N8ZW, of Portsmith Ohio was dismissed. Lozier complained about what he perceived as interference from the KF8HL repeater. Our letter pointed out that Lozier was listening from an 800 foot altitude and that merely hearing another repeater with no disabling interference was sharing -- not interference, and that frequency coordination is not necessarily exclusive use.”

--

In a related matter a petition for reconsideration from the KF8HL repeater group in West Virginia was also dismissed as untimely. That petition had sought reversal of an earlier Enforcement Bureau ruling that KF8HL was an uncoordinated repeater and had the primary responsibility -- but not the sole responsibility to prevent interference to the KC8FKP system located near Portsmith Ohio. (FCC, RAIN)

**

CONVENTIONS AND HAMFESTS: RILEY AT FROSTFEST 2003

The FCC’s chief ham radio rules enforcer, Riley Hollingsworth, K4ZDH, will be the keynote speaker at the Richmond Virginia FrostFest 2003. The FrostFest is February 9, 2003 in Richmond, Virginia. The venue is the Showplace center. For information please visit www.frostfest.com on the World Wide Web. (W4PW)

**

AWARDS: WILL THERE BE A WAS A-M?

Amateur Radio Newsline’s Paul Courson, WA3VJB, reports that the ARRL has promised to consider a proposal for special recognition of full carrier Amplitude Modulation. This, as part of efforts by promoters of the mode to earn the popular Worked All States or WAS award.

The proposal for a WAS AM was jointly developed by Pete Markavage WA2CWA and Mark Bell, K3ZX. League staffers have told the two that the idea will be considered at an ARRL Membership Services Committee meeting in January.

Several stateside hams have indicated they have achieved or are close to achieving WAS AM by working stations on popular AM gathering points on 160, 75 and 40 meters. More information is on the web at www.amwindow.org (WA3VJB)

**

SPECIAL EVENT STATION: A CELEBRATION OF KIDS DAY

Its a special event station to help celebrate one of the most important events in the ham radio calendar. K1D will be on the air through January 5th to celebrate the January 4th Kid's Day operating event. That’s the twice a year outing where hams are encouraged to open their hearts and their stations to youngsters nationwide.

As to K1D, that station is special in several ways. Even the call signs of the people operating are in the spirit of the event -- W1DAD and K1MOM who in real life Peter and Jeanne Schipelliti.

So keep an ear open for K1D and if you work Peter or Jeanne, QSL to 7 Dearborn Ridge Rd, Atkinson, New Hampshire 03811. More on Kids Day is on line at www.arrl.org. (News release)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

NAMES IN THE NEWS: ZL1AMO CONTINUES HIS RECOVERY

I’m Ken Locke, N8PJN, with an update on the recovery of famed D-X’er Ron Wriight, ZL1AMO.

Judy Roush, AA7UC of the International DX Association has some positive news this week. While Wright is still in medical isolation and continues to fight the E-S-B-L infection, he is improving. Intravenous feeding has been discontinued and ZL1AMO is now eating solid food.

Rousch says that Wright is still weak but he is able to communicate. In fact, he’s doing so with his family using a mobile phone. And Roush says that

Wright is anxious to resume his ham radio activities as soon as he has recovered. In fact, he continues to ask the family if they are receiving e-mails from the amateur radio community.

Meantime, the International DX Association reports that the ZL1AMO Air Ambulance Fund is within $5,000 of reaching its $20,000 goal. The fund was started to assist Wright in paying the fee to bring him home from Fiji where he was when he took ill. Funds received so far have been forwarded to the air ambulance account in New Zealand.

For the Amateur Radio Newsline, I’m Ken Locke, N8PJN. (INDEXA)

**

RADIO LAW: HACKER PHONE FREEKS PALO ALTO

The city of East Palo Alto California is stuck with a thirty thousand dollar telephone bill thanks to an alleged hacker. ATT says that the intruders were able to infiltrate the city's phone system last July. Over a five day period numerous long distance calls were placed to the Philippines.

East Palo Alto's typical monthly phone bill is about ten thousand dollars. In July, it was 40-thousand. ATT offered to reduce the total amount by about $10,000 but said that East Palo Alto was responsible for the rest. The city says it has no intention to pay the additional charges. (Published news report)

**

EMERGING TECHNOLOGY: MORE PEOPLE CARRYING CELLPHONES THAN EVER BEFORE

A survey by a telecommunications firm reports that over half of the overall nations population living in major metropolitan areas now own mobile phones and subscribe to service. This, according to ongoing measurements performed by Telephia Incorporated in 44 markets.

Telephia says that while the average penetration rate was at 51 percent, a handful of cities had penetration rates in excess of 60 percent. Some of the cities mentioned are in Greenville, South Cariolina with 68 percent, Atlanta with 67% and 63 percent in Orlando, Florida.

Telephia adds that recent results from an Attitude and Behavior Survey found the percentage of frequent wireless callers increased from 38 percent last year to 48 percent this year. Also that overall wireless service satisfaction increased significantly over 2002. (Telephia release)

**

INTERNATIONAL-AUSTRALIA: NEW SHORTWAVE CENTER OPENED

A new $6 million dollar radio Voice of International Asia broadcast center has been officially opened on Australia's Sunshine Coast. This, by the man behind the project - multi millionaire Bob Edmiston - of the U-K. The studio originates mainly programming for transmission on shortwave. It uses the former Radio Australia transmitters near Darwin in VK8 and the footprint covers

one-third of the globe. (Q-News)

**

INTERNATIONAL - THE AMERICAS: ANOTHER LOOK AT BROADBAND

Proposed U.S. government policies could harm competition in the broadband Internet and affect international e-commerce. This says the Consumer Federation of America could result in reducing market choices and driving up monthly fees for users who want high-speed Internet access.

The FCC ruled in March that cable providers do not have to share their systems or provide open access for competing Internet services. The agency is currently reassessing its line-sharing rules for local-phone giants like Verizon Communications and SBC. (Published reports)

**

DX

In D-X, five Chillian stations will be active as CE6M from Mocha Island from January 15th to the 18th. They plan to operate 160 through 10 meters on SSB and CW. Q-S-L to P.O.Box 591, Temuco, Chile. (425 DX)

QRZ-DX reports that someone pirated the call sign 9S1X and used it to operate 80 metres on December 13th. No other information is available at this time. (QRZ-DX)

And, W8GEX and WZ8D will be active as N8Z from St. Croix, in the Virgin Islands through January 8th. They will be at the home of WP2Z and will operate on 6 to 160 meters. QSL direct to WZ8D. (GB2RS)

Lastly, Q-News reports that the P29BPL, the six meter beacon in Papua New Guinea is on the air, but with reduced power and a lower antenna location. This is reported to be a preliminary test to make sure there is no interference to TV receivers located nearby. (Q-News)

**

THAT FINAL ITEM: IN MEMORY OF ROGER MC CARTHY KD6CC

And for our last item of the year we have a tribute. A special remembrance of one ham for another. It was our Support Fund Administrator Andy Jarema, N6TCQ, who brought this very special remembrance to our attention. We feel it is fitting that he share it with you as well.

--

Normally when you hear my voice its to ask for donations. Not this time. This time I want to share something with you. Actually, its the note that accompanied a donation that we received last June. It was only a few lines but it really tugged at our hearts. See what it does to yours.

The note came from Rob Sweet, KG6DKW, not far from my home in Arcadia California. Here’s what it said:

“Thank you for providing Amateur Radio Newsline. Enclosed you will find a donation in the amount of $50. I would like to make this donation in memory of Silent Key KD6CC, Roger McCarthy, who was killed in a motorcycle accident on May 31st 2002. I never met Roger in real-life, but enjoyed talking with him on the 2 meter band, and exchanging pictures with him on slow-scan TV.”

How do you respond to a note like that? After you wipe away the tears, what do you say?

We talked about it for several months and finally realized that what you do is to help keep Roger McCarthy’s ham radio spirit alive. That’s what Rob Sweet, KG6DKW, wants to do.

So Roger -- this one is for you. This week we dedicate the final Amateur Radio Newsline report of 2002 to the spirit of the ham radio fellowship that you created while you were here among us.

Like Rob, we never met KD6CC, but we wish we had. He sure sound like the kind of ham radio neighbor any of us would be proud to have living next door. May he rest in peace on the other side of the great Ethereal Abyss and may the light of Amateur Radio friendship that he kindled -- live on in 2003 -- and forever.

In Arcadia California, I’m Andy Jarema, N6TCQ.

--

Thank you Andy.

**

Over the 14 years I held it while living in Wisconsin, W9WI became my identity. Hams around the world know me by this call. Being forced to change it to AC4XX-something when I moved to Tennessee would be like forcing me to change my name from Doug Smith to Bubba Davis. The idea of getting a 4th-district 2x2 never even crossed my mind.

==========

The issue being discussed is to a considerable degree a result of USA callsign policy. The *only* provisions for temporary calls are for 1x1 calls - K1B, N8O, W2L, etc.. You can't get a 2x1 temporary call appropriate for Alaska/Virgin Islands/Hawaii/etc..

So you have really three choices:
- Use the inappropriate 1x1.
- Arrange to use the call of a ham already resident on the island.
- Sign your mainland call /KP2.

#2 is probably the best idea but if you don't know anyone there, it really isn't an option.

QUOTE

With the clean up now underway the good news is that all the Amateur radio operators on Guam are believed to be safe. Campbell says that several hams are known to have lost their antenna systems and the islands only repeater was also blown off the air. This, the result of the collapse of a nearby cellular telephone tower striking it as it fell.

UNQUOTE

No doubt the result of some "professional engineer" designing the tower to fall that way.

Walt Davidson wrote:
> The worst mistake the FCC ever made was to discontinue the mandatory
> use of call area prefixes to indicate the area from which a station is
> operating.

This decision was probably inevitable when the decision was made back in the 1970s to allow Extra Class licensees to request any unassigned call in their district. People who'd been saddled with bad calls like WB9NME could now get something the other guy had some chance of being able to copy. To then face the prospect of having to switch again - to who knows what - when moving to another district would be nearly unthinkable. (I was on the verge of telling the FCC I'd moved in with my aunt in Boston when they decided to open up vanity calls to Extras in 1977. If they'd not done that, I'd be a WA1 today. Unless they'd assigned me WA1NME in which case I'd have probably given up ham radio<grin>!)

There are plenty of countries in which the callsign doesn't give you any idea of where the station is. (G3NYY: is that Dover, London, Plymouth, or Carlisle?) In others, how many of us have any idea how the assignment works? I know you can tell from a Brazilian call where in the country the guy is, but I have no idea which prefix is where. Likewise for UA9's and UA0's - all I know is UA0Y-something is Tannu Tuva, and I'll bet 95% of HF operators don't even know that. BY, VU, XE, F, DL all have either no call areas, call areas too large to be meaningful, or call areas that nobody outside the country understands. VY0 is larger than most European countries. Is VY0AA in Iqaluit, Qausuittuq, or Ikaluktutiak? (pronounce all three correctly and I'll concede the argument<grin>!)

Even if everyone *does* sign with their call area, how much is accomplished? You need Wyoming badly for WAS; you hear WB7NME calling CQ. Sorry, but it's FAR more likely he's in Seattle than Cheyenne. W0WI - probably in Minnesota. Probably *not* in North Dakota.

How do you handle the growing number of mobiles? People who have a vacation home in a different district? People who've just moved? What good does it do to force me to change from W9WI to KX4XX if tomorrow, K8ABC goes mobiling through the state on his way from Michigan to Florida?

Incorrect.

One of the things that jerks do is make blind
> judgments about people!

Do you mean "knuckle-dragging 4-landers with a Southern accent?

Or perhaps you meant "welfare mothers of color with their hands out?"

You know I could go on and on. Its all in the archives.

Doesn't Riley have a 4 call?

To claim that I'm a jerk on the air, without
> ever having had a QSO with me, in itself causes you to be suspected of

> off making such gratuitously disparaging remarks? Oh, never mind --
> I remember now -- you're a no-coder. I should have expected this.
>
> 73 de Larry, K3LT

Ding ding ding.

Now you're making blanket judgements about no-coders. Where does it
stop, Larry?

And it was you who said that you were perfectly capable of being a
jerk on RRAP without it coming out in your QSO's on the air. But then
you cited several instances where no one would come back to your calls
and plea's, re: Larry's personal SET.

I wonder why that was? Maybe they have jerk detectors wired into
their emergency radios.

Oh, goodness, Dave will be all upset. I am picking up on just one part of this post, Brian, so you'll have to forgive me my transgression.

I remember when I thought about trying out some DX/QSL stuff when I first got started in ham radio. Then, I kept hearing about this "via the Bureau" stuff. Some won't do anything but the Bureau. It sounded like a lot more problem than it's worth.

Bother you?! You're hilarious, Dave. I don't see any intellectualism coming from you on this newsgroup, ever. And yet, you pontificate as if it is a normal mode of operation for you.

You were provided evidence and you chose to ignore it. It's as simple as that, nothing more. Whether I was responding to the quoted material, or not--and I was, doesn't do a thing to negate the things I said.

Bubbye, Dave...

OH MY!

TWO RRAP'ers! Wow! And from THIS you make the absolutely ludicrous
assertion about poor operators-vs-RRAP participation from THAT...?!?!?

Just EXACTLY what did they do to you on the air to allow you to formulate
such a scathing rebuke, Brian?

Sheesh!

Yeah, it's the lack of "fastest" that wouldn't do for me. One thing I am not is a patient person, and I reserve patience for instances wherein it is absolutely required--not for amateur radio. I favor QSL direct and getting a card ASAP--although I'm not sure I'd be interested in paper chasing. My husband recently received a package from the "Buro" and he can't even remember the contacts he made now. And, he hasn't been on the air (he's a General Class) in--gosh--more than a year.

How come you cross-posted to the DX group? I don't think they'd appreciate that.

By the bureau means: Lots less trouble and it is of worth
Not addressing umpteen envelopes -- just one box to Connecticut
Not $1.00 to $2.00 or IRC's for return postage for each card -- just 10
cards or less for $1.00 or $4.00 for the first pound of cards or portion
thereof--approximately 75 cards.
A fairly long wait
You must be an ARRL Member to use the OUTGOING Bureau.
http://www.arrl.org/qsl/qslout.html

And the Incoming Bureau does not require ARRL membership.
http://www.arrl.org/qsl/qslin.html
Many of your contacts will send to the "Burro" and you probably have some
there now but you must send them a check so they can set up envelopes and
postage. Sending your address labels will help.

I use the bureau for all "common DX".
Rare or new ones - direct or by manager.
Stateside QSL Managers - yes with an SASE.
I tip all QSL managers - helps with print costs, etc.

Oh yes, it is a horrible situation :-)

During the WAE contest I usually sign my call as W0RLI/7 or W7/W0RLI
so the Europeans will not be confused about where I am located.

Maybe I should do that all the time :-)

It is apparent that only you, of all individuals operating from Somalia
during that time period, neglected to get permission in writing from
someone authorized to grant it. That it never dawned on you that this
would be the thing to do, marks you as a rube.

Wrong again, try ZC4.

ZD7 - St. Helena
ZD8 - Ascension I.
ZD9 - Tristan da Cunha and Gough I.

I remember when the FCC started giving out 2X2 KG6 calls to California
hams hearing an exchange to a ham got singled out during a pileup to a
DXpedition in a fairly rare entity: "59 and thanks for the Guam
contact. That's a new country for us".

At least in that case they had to actually have an address in the
"country" at the time the callsign was issued.

Actually I lived in the 7th area for 16 years before getting a "proper"
callsign.

Hams are "synchronized" to local time too. They simply use
international time.
You should understand that. I guess you need to use your leadership
qualities to stress the importance of being flexible in order to achieve
specific goals.

Jackie, the first time I fired up as a novice, I had a buddy who could copy code a lot better than I sitting there as a back-up ;) The first couple of times **was** unnerving! Too bad my friend (the backup) never went for a higher class license (back then, novice licenses were issued for 1 year and were **not** renewable. You could never have held an amateur license before to be eligible for a novice ticket).

>hasn't everyone in this hobby weighed in on this
>subject by now?

Not really.

Consider a simple fact:

Back in 1998 there were about 675,000 US hams. FCC proposed a sweping
restructuring, and asked for comments from all interested parties (not just
licensed hams). They got about 2200 replies, mostly from individuals, and
overwhelmingly from licensed hams. (You can view them online at the FCC website

http://www.fcc.gov

using the ECFS system.

IOW, not even 1% of licensed US hams bothered to respond to the FCC's request
for input.

>I put in my 2 cents on this survey- I'm one of the odd ones

Fair enough. When you get your HF rig set up, take a listen on the CW/data
parts of the ham bands and judge for yourself.
>
>I can say that I now know CW... at least, I can copy/send very well at 7.5

Why is voting on such an issue "improper and inherently unfair" as long as all interested parties get a vote? Is there something wrong with democracy?

Far as I can tell, the eHam survey doesn't require a license, so it's open to all interested parties.

I very much doubt you would say it was "improper and inherently unfair" if the vote was going the other way.

: KR6 Okinawa (Ryukyu)

Correct, but lacks detail.

: KR8 -- Swan Is

Incorrect.

: WB6AA was a Novice call for Canton Island.

Correct. I had a friend who was WB6AC. Rare DX, even back when the
tracking station was there. He called CQ incessantly without answer in the
Novice band, and was immediately bypassed when people heard "WB6....".

> parts of the ham bands and judge for yourself.

I meant more along the lines of, if I would find it useful, or more of a pain to use than it's worth. I'm sure many people still use CW and find it useful. We'll see if I do.

> Was it really all that hard to learn?

I didn't have trouble with it at all, but then again I learn other languages very easily, so I don't propose to speak for everyone when I say it was easy to learn.

> >I'm sure there are some readers here who're chuckling under their
> >breath about that.
>
> Not this one.

I was thinking of one in particular, who I killfiled long ago. He Without Error, who claims to have passed Extra in 8 minutes and calls some of us "CBPlussers". Even though he spells worse than a six year old and has no obvious command of English grammar, he feels he can judge people who are now taking the CW exam at 5 WPM and the "dumbed-down" writtens. You know who I'm talking about. He'd almost be a good troller if he weren't so patently obtuse.

Ah well. I've got to wait until 1/11 to take the CW and General exams. Then I've gotta wait until I can afford the IC-718 (or some similar HF rig) before I can get in on the fun.

Jackie

I think so! Nothing upsets me more on the air (other than "frequency kops" and profanity) than calling a W1 knowing I need a "1" area station for Sweepstakes multipliers and having him tell me he's in LAX.

If the FCC's not going to differentiate anymore, they might as well quit trying to figure out where the applicant resides and issue a corresponding call. Rather just start at KA1AAA and work thier way through to WZ0ZZZ for everyone unless they opt for a vanity call.

Clearly the UK is/was organized differently. The US colonies are all
directly governed by Washington and they have, at least the major ones,
have some degree of congressional representation.
As far as I'm concerned, I live in the USA. The US Immigration officials
at our entry points would seem to agree. If not the USA, then what
country is it???

What a sweeping statement. Are you saying that nearly all, or even
most, DX stations accept the ARRL DXCC as a worldwide standard? The
ARRL can't even get half of the US hams to join, let alone
participate. I'd wager that most DX hams have never submitted a thing
to the DXCC desk.

> Maybe we can get you and Vipul straightened out over time.

Why? I've finally got you pointed in the right direction on the "DX
station as Ragchewer" problem.

Zoran, I think you should let it go. There are about 4-5 OM's here who just don't get it. If they're happy to spend two hours on internet after every QSO just to find out who they just worked in contest - so be it. :-)

I would like to wish you all a very happy new year and especially to my friends; Bakir K9R in Kuwait, Heinz K0D in Frankfurt, Yoshi N1T in Yokohama, Bill W6O in South Africa, Wong N7Y in Thailand and not to forget David KBA9TYWER in the USA. (David, congrats on the new vanity call, I guess that old call KBA886TYWMM/65 was real pain in contest)

I'll meet you in the ARRL SSB contest next year, I'll be M3E, QTH Brisbane - East coast of Australia (Just in case you'd require QTH)

Ah, before I forget, I have to announce the next years DX pedition to Heard Island, we'll be using the callsign "VK" (We fought for months to get rid of that "0", can you imagine that, bloody idiots wanted to give as the call VK0 ... unbelievable, too long ...boy oh boy!)

Mike VK .... just VK (Don't tell anyone I'm on Norfolk)

(Zorane, pozdrav - Mirza VK4DX)

Ah. My bad. I thought HAI was vanity. It is apparently HVIE. Well, Dave,
you were right for once. I would have kept that call, too, though.

>

I don't want to discuss the movie, Dave--you've been doing that all by yourself. I want to discuss why you told someone you didn't believe them, then, when presented with the evidence that they *are* referring to a true story, you've never once even attempted to tell that person you are sorry--unless you've done it through private email.

When I was in Texas last year I called CQ on 50.525 MHz. But I forgot
to add a location to my callsign. The guy in the ham club at some local
college was excited until I told him that I was just on the other end of
town.....

Back in '94 when I was in Beaverton Oregon, my home packet BBS
was on a machine with the call W0RLI. But I haven't done packet
in years, 1200 baud is dreadfully slow even if the channel is not
busy.

It's not in one of our 50 states, but we still own it. Along with a few
other places like Puerto Rico and Guam. They get 1st Amendment
rights under our constitution and stuff.

They need a mailing address.

>Rather just start at KA1AAA and work thier way through to WZ0ZZZ for
>everyone unless they opt for a vanity call.

Uh huh.

Now here's the upside:

Back in the bad old days of gotta-match-the-call-district, some districts were maxed out on vanity calls while others weren't. Somebody with a nice 1x2 or 1x3 who moved to a new district might find they couldn't get a similar call in the new district, and couldn't keep the old one. You willing to trade in K4YZ for a 2x3 mouthful just because you moved?

I'm in the process of educating myself on all of the various HF rigs out there... the eham.net product reviews are helpful indeed. If I knew a bit more about these rigs and what to look out for, or if I could buy one from a local ham and try it out before buying it, I might consider buying a used one, but the warranty is indeed a big selling point for me. I have to admit that I don't know much about HF rigs and their various problems, yet, so buying used might present problems for one as uninitiated as me.

Also, the rigs I'm considering buying aren't all that expensive new (the IC-718 and the Icom MKIIG). Now, the antenna/tuner systems I am considering might actually end up costing more than the rigs themselves, which is okay if they perform the way I hope they will. I'll keep the 'group posted on my purchases. It's my goal to make General on 1/11 and have a rig/antenna system bought and set up by February 1st (if not sooner).

I'm headed to visit family in Arizona tomorrow and will be on a much-needed vacation for the next week, and thus away from the 'puter.

Hope everyone has a happy (and SAFE!!!) New Year, too!

Jackie

Because some people don't like it when it interferes with
their positions! 8^) We've already seen that this one doesn't like
much about ham radio, and wants to change it, even though most of it's
practiciners don't want it the way he does. Democracy for people lke
that is a bad thing

>Is there something wrong with democracy?

Winston Churchill had something to say about that.

I'm happy with it as long as it doesn't take a democratic vote
to abolish itself! ;^)

Lot of changes to the packet network here since '94.
Many 9600 baud ports all around the Metro area.
Lots of TCP/IP operation.

I moved from West Linn to Parrett Mountain in '97, and retired a couple years
later :-)

Getting back into DXing ... 239 entities since March 1.
Ameritron AL-80BQ arriving shortly, thank you Santa Claus.
Second tower sitting in bits outside the shack, waiting better weather.

Working on a log archiving program. Thus my interest in this thread.

Good to hear from you!

I suspect they "get it" just fine, but have the perspective to understand
that we will fail in any attempt to legislate such a thing, and thus you
should get back on the air even though conditions are terrible, and
work whatever you can hear and perhaps ASK them where they are
located or as you suggest spend 10 or 15 seconds to look up the information
about the callsign sometime later on, because during a contest one knows
where a given callsign is located from the exchange they send or from
the various spots found on the packet cluster and if you can parse this
sentence you probably had as much fun reading it as I had writing it.

And your reference in US law for this statement is...?

>> US regulatory law allows use of a "plain" US call sign in the US
>> Virgin Islands - without a "location indicator" - if that is the
>> call sign assigned to the operator. I was one of those folks who
>> fought long and hard several decades ago to get the FCC to change
>> the rules which formerly required detailed logging as well as such
>> indicators and the words "portable" and "mobile" when operating away
>> from the station's "authorized location", which is another concept
>> that no longer exists in American amateur regulations.
>
>Then you fought for a stupid system to replace a sensible and
>well-ordered one.

In those days, those of us in that group spent several hours a day
commuting in heavy traffic working mobile. Logging was darned near
impossible to do correctly. It was also determined that if the
FCC didn't care - and we made sure that it didn't - it was no one's
business whether we were at our "fixed station location" or elsewhere.

Not every ham is a DX chaser or contester....in fact I would
venture to say that the majority of US hams are neither.

>> In the U S of A, what is not required by the rules cannot be
>> required - it's optional on the part of the operator. I choose not to
>> use it.
>
>I am not disputing that you are entitled to act in this way. You have
>that prerogative. It serves to demonstrate how stupid you are!

And your professional experience in radio regulation is...?

>The worst mistake the FCC ever made was to discontinue the mandatory
>use of call area prefixes to indicate the area from which a station is
>operating.

If that was "The worst mistake the FCC ever made" you have a lot to learn about communications regulation in the USA. How long have you been involved in FCC matters professionally?

We Yanks learned that the way to keep "colonies" close is to make
them part of the US of A whether they are called that or not, and
give them all sorts of perks.

OTOH, you Brits went the other way in the latter half of the 18th
century and we all know how THAT turned out.

The FCC doesn't care where the applicant resides. Initial issues
are made corresponding to the mailing address specifed on the
application. As long as the U S Postal Service delivers (or
forwards military) mail there, and the applicant certifies that s/he
can receive mail at that address, it might as well be in East
Timbuktu.

All of this came about in the aftermath of the call sign selling
scandal in the late 1970s.

Mow it can be told - wanna know what we did with those notices?

They were placed in a file cabinet drawer in chronological
order and never touched again until five years later when they
were trashed.

Having dutifully submitted such over the years I was shocked to
find that out when I joined the agency, and when I had enough
"stripes" lobbied "the powers that be" to get the rule changed.

Took quite a while but we did it.

Zounds! there's an idea. 8^)

People are much more mobile than they were at one time. There are some
who would probably have to change callsigns on a yearly basis if we
followed the old rules.

There are aso a lot more hams now. Some places would end up
with interesting callsigns being assigned, while others would loaf
along.

If dx hunters are "owed" a specific callsign identity for the
location of the person they are hunting for, perhaps we should get
more specific for the county hunters, and everyone's callsign be
county specific. This would be a great help for them.

"N2EY" <n2ey@aol.com> wrote

: Then there was KG6GJX. Unassigned now, as I recall. Wonder if anyone remembers
: him and what he did?

I somewhere saw that call attributed to RM1 George Tweed, USN, a straggler who was left on Guam during the Japanese occupation, and about whom a book and movie were done ("No Man is an Island").

While George Tweed was a real person, but I don't know if he was a ham. In any case, since KG6xxx call signs weren't assigned until well after WW2, that story is a certifiable legend.

The book and movie set him up as a heroic sort of fellow who risked his life for the people of Guam, but a much different story was told by the Guamanians I've talked to. In their search for him, the Japanese commanders tortured and executed several Guamanians including a Roman Catholic priest. After the island was liberated, he took on the cloak of a great hero and did not even acknowledge the great debt he owed the native people. He was not well regarded there.

Indeed!

CQ Zones, IARU Zones, Counties, WAE countries, States / Provinces /
Prefectures / Oblasts / Cantons / Etc. ... grid squares (VUCC award),
telephone area codes, zip codes (WAZ anyone?).

So I figure it is best to just work on my WAS (Worked All Stations)
and WAC (Worked All Callsigns) awards :-) The rest will follow ...

You Gringos make us laugh. Why? Because you will hire a Mexican to wash your car but you don't want him livng next to you.
You Gringos also drool when you see a beautiful Latina woman in your neighborhood and some of you even say, "Those young Mexican women are good looking when they are young but they grow up to be fat.".
You Gringos said the same thing about Italian women, too.
Most of you middle aged Gringos are fat and you have bellies that hang down over your belts so far that you cannot see your zippers.
Still want to make fun of the beaufitul Latinas you would like to get your dirty hands on?
You Gringos should go on a diet...no beautiful woman wants a fat old man with breasts bigger than hers.

voting, as in an election is good. polling, done by an independent
organization with a randomly chosen sample is next best but can still be
biased if the questions are written poorly. call-in or internet polling is
nothing but a way to generate interest in the media outlet who runs it,
there is no scientific or social validity to it... it is best described as
the media making the news.

W/O George Ray Tweed, USN, hid from the Japanese for 31 months on Guam. With extensive help from the locals. He was able to receive news broadcasts from the USA and even "published" a paper with war news that was far more accurate than Japanese propaganda.
>
>While George Tweed was a real person, but I don't know if he was a ham. In

>well regarded there.

In the QST stories he credits "the natives" with helping him in many ways, but there is little acknowledgement of the terrible price paid by some of those who did so.

Perhaps that's why the call is still unassigned.

You're getting down to semantic differences between "United States" as a concept and "United States" as the name of a country.

True enough, the U.S. Virgin Islands (don't forget, someone else owns the other half<grin>) are not a state - are not part of the united states of America. (lower case intentional) They are, however, under the jurisdiction of the Washington government - they are part of a nation that calls itself the United States of America.

I can think of several other areas that are under control of a large central government but not necessarily on the same terms as the rest of that country. VK8 is not a state, but nobody would claim it isn't part of Australia. VE8/VY1/VY0 aren't provinces but are most assuredly part of Canada.

The *people* of the U.S. overseas possessions are certainly USA citizens. Unlike those of most U.K. overseas possessions, Puerto Ricans/USVI citizens/etc. have full U.S. citizenship and the right to move to the mainland.

That you said I was "wrong, wrong, wrong" then I pulled it out of a
readily available ARRL resource marks you, with all your vast overseas
operating experience, not even a novice, but merely a non-player in
operations from countries without a government.

You had no experience in such operations, yet you pass judgement on
others who have. You and Ed.

Good grief, Walt. Unfortunately, you're going to have trouble
getting people to agree with your definition.

By that definition, Pennsylvania isn't part of the USA
because it is a "commonwealth". How does that fit in with your theory?

I don't know anyone so computer/internet illiterate that it would take them two hours to find out the call sign info. Two seconds is more realistic (if one has the internet pulled up already).

And even faster is a callsign directory that can be resident
on your computer. Granted, they have to be updated every so often, but
even operating PSK-31, I can look up the callsign during a persons CQ,
and have their name and QTH in my log before I answer them. I'm
surprised anyone finds a problem here.

You cannot produce any documentation of authorization to operate there,
and it's not accepted for DXCC credit. I think YOU characterized it all by
yourself, Brian.

Dave reads the above 3 questions and my reply.

He concludes that I will manufacture a dozen 1n34a's.

Since I live here, I'll speak for PR as an example. There is a segment of independentistas here (about 4% at voting time) that also insist that Puerto Rico is not part of the US. Their claim is that the official political status of "Associated Free State" granted in 1952 by the US Congress is the workable equivalent to independence. (but oh!, there's the 'state' word if the argument is to be based solely on words and titles!) However, this nut fringe has attempted things like National passports and has been soundly rounded off by both the local government and the folks in Washington who will very clearly tell you that PR is indeed part of the US and must play by US rules. Most of our Federal entities (like the courts for example) are part of the hierachy of the NY/NJ district.
What Walt doesn't realize is that the American colonies are organized much different than the British ones. No visas or work permits are required of residents that might travel between the mainland and/or between the various entities. Our 'colonial' passports are the same as the mainland...not always so in the case of the UK 'colonies'.
So, if the local government says so, and the Feds say so, and the zillions of court cases disputing pro or con being 'part of the US" have all agreed...I think Walt might be wrong.

Then, why don't you put up or shut up about my giving the movie "Lorenzo's Oil" a review? You accused me of reviewing the movie, Dave, and I have already once asked you provide proof. You haven't. You're, as usual, a mountebank.

Brian:

On second thought, I've changed my mind. I *do* think it's not only
possible, but entirely likely, that you're a jerk on the air -- you surely
ARE one here on RRAP, and by your own standard, you'd have to be
one on-the-air as well!

> One of the things that jerks do is make blind
>> judgments about people!
>
>Do you mean "knuckle-dragging 4-landers with a Southern accent?
>
>Or perhaps you meant "welfare mothers of color with their hands out?"

Those were not blind judgments. Those were enlightened, thoughtfully-
considered judgments based on years of observation. And BTW -- my
"judgments" of the 'welfare mothers of color,' are shared by two
noted commentators by the names of Dr. Thomas Sowell and
Dr. Walter Williams. Obtain one of their books, check out the photo
on the book jacket, and tell me if you notice anything unique about
them!

>You know I could go on and on. Its all in the archives.

As are thoughtful apologies made for both of the above comments.
Of course, that doesn't cut any ice with you, doesn't it?

>Doesn't Riley have a 4 call?

Yup. K4ZDH.

>To claim that I'm a jerk on the air, without

>> 73 de Larry, K3LT
>
>Ding ding ding.
>
>Now you're making blanket judgements about no-coders. Where does it
>stop, Larry?

Don't look now, Brian, but this is RRAP. "It" isn't ever going to stop!

>And it was you who said that you were perfectly capable of being a
>jerk on RRAP without it coming out in your QSO's on the air. But then
>you cited several instances where no one would come back to your calls
>and plea's, re: Larry's personal SET.

No one responded to my "simulated emergency" calls on .52 simplex
because there weren't any receivers tuned to that frequency! BTW --
please provide ANY documentary proof that what I did that day was in
any way a violation of the FCC Part 97 Rules and Regulations, or in
any way a violation of the concept of "good amateur practice." I will
accept a ruling from K4ZDH, in spite of his 4-land call sign!

Put up or shut up -- BOY!

>I wonder why that was? Maybe they have jerk detectors wired into
>their emergency radios.

I'm sure the one on my radio would ring whenever you broke squelch!

I think they call that problem you have "transference". You screw up
and it somehow becomes my screw up. I'm not the guy setting out to make
my diodes.
I think Vipul has an edge on you.

We can interpret your response in a several ways. What is the last
question posed to you? We can assume that your non-sentence reply is in
response to it.

Since the other questions have to do with equipment or gear, we can
assume that you believe that diodes are equipment or gear. I think the
rest of us would agree that they are components or parts.

Since you place your response below the "Happy Holidays!" wish, we could
assume that "A 12-pack of 1N34A's" is a seasonal greeting used by your
family.

or the state of alaska or hawaii for that matter.

you know, the basic problem here is that the ARRL has designated all these
different types of things as 'countries' for their DXCC award and lots of
hams believe them. just because someone convinced a committee that
something warrented being called a 'country' for DXCC doesn't make it so.
there are many islands that are called countries only because they are some
arbitrary distance from somewhere else, or are run by a different department
within the U.S. government... but the fcc has jurisdiction over all of them
and as long as they do none of us are required to sign any kind of portable
designator under the present rules. the ARRL confuses things even more by
counting some of them as states in some contests and awards and then as
countries in others... and then lumps some of them together into sections
for other things.

>Because those who disagree often leave/don't join out of disinterest. This
>tends to reinforce in the voting those that prefer Morse

Voting is a moral responsibility of every eligible citizen, and unfortunately ONLY an moral one. If voting was a MANDATED function of citizenship, then perhaps things might seem "fairer" to some, but that will never happen.

That someone chooses to NOT "vote" on something for whatever silly personal excuses they have, then the outcome of the voting usually IS "sleighted". How could it be otherwise?

For those who think that "one vote" doesn't count, one need but reflect on the 2000 presidential election. The percentages of votes that seperated Algore from the White House were miniscule.

I am sure everyone (that is in the United States) in this forum knows more than one peson who whines and cries about the inequities of the political system, yet when asked how THEY voted, they "proudly" state they didn't vote. They assert they are "protesting" the "system", yet cannot explain how NOT voting makes any kind of a statement other than to allow those who would exploit that weakness to prosper.

Voting is, in and of itself, fair. It is the apathy and foolishness of those who elect to not exercise that privilege that skew the system. If one "leaves" because they disagree, then they just vacated the very chance they had to change things to thier liking. If they are "disintrested", who cares about what they want anyway?

The ARRL DXCC award is for working ENTITIES not COUNTRIES.
Many entities are also countries, but many are not.

See also the WAE "countries" list, which includes Bear Island
apart from Svalbard for example, but both count the same for DXCC.

So it is really quite simple: the entity (confusion intended) that runs the
contest or gives the award gets to set the rules any way they like.

So follow the simple rule of "Hear 'em, Work 'em, Sort 'em out later."

Which is essentially why the ARRL changed the term "country" to
"entity" in the DXCC rules (but let's not start that thread again).

I'm inclined to agree. I think we have the makings of a whole new
series of ad campaigns.

What would Jesus have drunk? - For new Gallo "Gallolee"

Where would Jesus have eaten? - For Long John Silver's new Mega-feast

Where would Jesus have stayed? - For Hampton Inn's Heavenly Rest suites.

>
>How long have you?

Just about forty years.

Three years as a regulatory engineer on the staff of the Israeli
Ministry of Communications (I was 4X4UQ in those days) where I was
the liaison with the FCC and ITU.

Twenty-eight years on the staff of the FCC doing both engineering
and legal enforcement and policy work - retired as District Director
of the San Francisco District.

Eight years as a communications attorney dealing exclusively in FCC
regulatory matters for amateur radio and public safety licemsees.

Keeps me off the dole, and permits me to enjoy ham radio daily.

Actually, someone pointed out that it isn't a vanity call at all...that was my bad. I thought HAI was vanity. There's a lot more codes than I remember, but that is beside the point.

Oh, and there aren't *any* callsigns that take the ARS "one step closer to extinction." The ARS isn't close to extinction at all, unless you want to believe it, Larry.

> on the book jacket, and tell me if you notice anything unique about
> them!
>

Your kind will always find ways to support your twisted, dimented, disgraceful thoughts, Larry. *If* you are telling us that these men are black, that makes no difference as to their opinions. If you are telling us that these men are black and believe the same way you do, then that doesn't make them any more right than you are, and you are very wrong.

There are abusers of every system. I suspect it was some of my parents' and my tax dollars that went to funding your college education you *say* you have, only to have you turn around and waste that money on never doing anything professional with your education. That's abuse. So, unless you wrap yourself up in your disgusting judgement calls of other people, then *YOU* put up or shut up.

> >

I don't know about for Brian. But, why would you state that there are apologies for comments that you made in the same post in which you defend them?!!!!? God, you sound more and more like a KKKer every day. Are they still active up there? Well, guess it doesn't matter--you are.

>

And there barely ever is. There are not very many areas where 146.520 is
monitored, Larry. If I recall correctly the only mission your personal SET
was to accomplish was so that you could then chide and sneer at those who
find emergency communication a true asset to the communities in which they
live. It's the *only* mission you ever have in life, Larry: to attempt to
make other people miserable, just like you.

Thought you didn't "do" VHF/UHF phone, Larry.

It is always disheartening to be confronted with a reality that people like you exist. But, the positive thing is that there are many more of us who *don't* think like your type and who won't let you just say whatever you think is right and popular without saying something back.

Oh Oh, looks like you got Kane on the ropes. Whenever
Phil starts losing a debate, this is one the standard "lines" he
resorts to. Either this or name calling, typical big government
liberal bureaucrat. You should really get some new
material Kane.

>I'm in the process of educating myself on all of the various HF rigs out >there... the eham.net product reviews are helpful indeed.

Yep, but remember one thing: They are user impressions. What one user loves, another may hate, and a rig that's good for some things (10 meter SSB) may not be so hot for something completely different (40 meter CW).

>If I knew a bit
>more about these rigs and what to look out for, or if I could buy one from a >local ham and try it out before buying it, I might consider buying a used >one, but the warranty is indeed a big selling point for me.

Last thing ya need is somebody else's headache.

> I have to admit
>that I don't know much about HF rigs and their various problems, yet, so >buying used might present problems for one as uninitiated as me.

Here's a blatant plug for ARRL membership from a longtime member:

Consider spending the $39 to join ARRL. Almost all of the products they have tested in the past 15-20 years are viewable on their website, but you gotta be a member to access the Product Reviews. (There are some exceptions). They actually buy the rigs anonymously and test them in the Lab, verifying performance and looking for problems. In some cases they do an expanded test report that appears on the website. I don;t know if they have tested the IC-718 yet.

If you have a friend with a pile of old QSTs, or membership, the Product Reviews can be a big help.

The way I figure it, if membership keeps me from making even one Big Mistake every 5-10 years, it was worth the money. QST's a good mag, too.
>
>Also, the rigs I'm considering buying aren't all that expensive new (the >IC-718 and the Icom MKIIG). Now, the antenna/tuner systems I am considering >might actually end up costing more than the rigs themselves, which is okay >if they perform the way I hope they will.

What antennas are you considering that cost so much?

Oh, really?

Perhaps you need to rush over to their web site and send the governor an
e-mail advising him. Here's their web site: http://www.usvi.org/

Now here's a really strange coincidence: The "chief of state" of the US
Virgin Islands is President George W. BUSH, with Vice President Richard B.
CHENEY. Do you suppose these two -- Bush and Cheney -- are related to US
President and Vice-President of the same names? Consult:
http://www.cia.gov/cia/publications/factbook/geos/vq.html

And while you are at it, tell these folks that they are in no way associated
with Great Britian:

What photo? If you mean the one that used to be on QRZ, how can you tell how big an ass is with only a picture of my turned to the passenger (my husband) when I was driving?

Somehow, though, it strikes me as ironic that if I thought like you, agreed with you, said things you like to hear, etc., that my looks wouldn't be an issue, Dave. After all, we'll never date, never marry, never have sex, never work together, etc., so why would you worry about the way I look?

Why *would* you say anything about someone's ass, Dave? And mention whapping in the same post? Now that I think about it, that was really weird--even for you.

We don't even CARE what you believe! The scenario that Jim Hampton and
others describe happens pretty often. Hams often know the original holders
of callsigns and the sounds of their

voices--even if they have been inactive for years. It just isn't easy to bootleg a call and get away with it. I've pinpointed unlicensed operators with the most unsophistocated equipment and, then again, I have access to some pretty darned accurate Doppler DF equipment that is used by USAF to locate downed aircraft. With that, I can drive right up to YOUR front door and say with 99.99% accuracy that the offending signal is originating from your residence if, indeed, it is.
We (USAF Auxiliary) have even determined that an ELT (emergency locator transmitter) is moving
down the highway, have isolated it, and stopped the offending UPS truck that was shipping/carrying
the accidentally activated unit to get it turned off.

You are trolling, of course, and are incredibly stupid if you truly believe that you would not be punished for operating an unlicensed ham station. But then, that is the reason that I see CB antennas on run-down houses with chipped bricks and plywood in the windows, and the requisite
'74 Buick with flapping fenders in the yard. Oh, there's that bad smell that seems to permeate the
entire area..... You stereotype hams as ALL old men, but CB has its stereo-
types as well. Me? I'd rather be stereotyped as an old man (I'm not) who made a good living in the railroad industry than as a bad-smelling, rotten-toothed cotton mill hand that never got much above minimum wage. At least, I can afford a decent radio shack. Go to Google Search and type in W4CLM. Click on the web address that it gives you. You will be taken to a website of a lady
whose radio SHACK is worth more than most Southern CBers entire houses!! The shelves upon
which her equipment resides are CUSTOM OAK built-ins and cost over $20,000. The equipment
adds another $40,000---and I'm just guessing~!!!!!!!!!
.....then there's her husband's model train room!!!!! So you see, those stereotypes can be promoted and/or defended against.

There are well-educated CB operators, operators that live in $150,000 houses--and there are those who live as described above. Everytime I have DFed a bootleg operator, it led me into one of those poor neighborhoods with the dreadful stench. Like Rabbit Ears in Fla who is serving time
for such misdeeds, it is those hopeless, dead-end job losers that have ONLY a CB "reddio" and a
6-pack of beer to look forward to that usually get themselves into trouble because of an inflated sense of self-worth and bravado that somehow gets magnified by his looking down into a mike that doesn't reflect who or what he is talking to..

Honestly, it has been tried many times (the bootlegging calls), and it doesn't work. They DO get caught and, yes, it is because the hams simply do not put up with shenanigans as are tolerated on CB.

Jerry

Oh, <giggle> I went back and looked some stuff up. You thought that I was
talking about physical dimensions when I told you it would help if you moved
about. Nope. I don't care what you look like, Dave. What I was referring
to is that, perhaps if you forced yourself to get out more, you'd begin to
experience real life...not the one that's in the book, or demanded of you by
protocol. Although, maybe you like predetermined things.

240 weighs more. 400 weighs a lot more.

>However, the lower loss may make
>a difference, particularly on receive when trying to pull in a QRP station.

Just the opposite.

The difference is less than 1 dB on the bands in question. Not enough to make "a big improvement" in radiated strength.

On receive, the limiting factor here when receiving weak signals is atmospheric noise. Said noise is easily heard on any of my receivers. Reducing the feedline loss in the way you propose will simply make the noise a little louder, but won't affect S/N in any real-world manner. To hear weaker signals on the bands described requires a better antenna, not a lower loss feedline.

In year's past there used to be one or two
frequencies on 75 Meters which handed out
awards to various 75 (and 20) Meter operators
and frequencies which stood head-and-shoulders
above the rest. Awards were given for the
widest signal, worst audio, biggest RF suckup,
most likely to blow up another amplifier in 24 hours
ettc etc.... What freq is this held on?
Is this still held on New Year's eve as in Year's
past? What is the Frequency ?

What does the number of seats have to do with anything?

>> And the private schools are full anyway.

(1) How do you figure that? And (2) what about the schools that open in response to availability of vouchers?

>> Vouchers will just make it cheaper for the parents of
>> kids already there, or allow the private schools to raise
>> their rates.

Vouchers will have no discernable impact on "elite" private schools. A voucher for $3K or so still won't get your kids into Choate Rosemary Hall, which probably charges $15-$20K per year these days. Some schools proably would raise tuition, both to capitalize on available money and to inhibit enrollment from folks they don't want. So what? Parents who can afford Choate are not the targets of vouchers--it's the African American parents with children stuck in hopeless schools who will benefit.

Note also that rich parents getting a $3K voucher are getting only a minor refund of their tax dollars; they're more than paying for their own vouchers. Those African American parents I've mentioned, who pay litter or nothing in taxes, are getting a positive benefit which is coming from the pockets of those with higher incomes. (Indeed, some conservative types object to voucher proposals for exactly that reason.)

>> And that just drains off money from the public schools.
`
No, it won't: if the same number of students attend as last year, then the money will be the same. If half leave, the money will be halved--but so will the student body. Available dollars per student will be unchanged.

>> So low income parents get shafted as their kids get even crappier
>> schooling.

Crappier schooling than that already provided to inner city kids is pretty hard to imagine. Will teachers start administering electroshock therapy? Hanging truants from the yardarm? How exactly could it get

worse?

> Yup. I'd be all for vouchers if the private schools had to play by the same
> rules as the public - for example, having to take any kid that wants in,
> regardless of special needs.

Excellent plan. Let's stack the deck so that private schools will become as rotten as public schools, and then let kids go to any school they choose. Bwahahaha! (But not the schools that REALLY rich kids go to. Senators' sons still need a good education, if they're to inherit their papas' dynasties!)

You both seem not to get it. The purpose of vouchers isn't to drive people wholesale from public schools. You're neglecting to consider how terrifying a SMALL flight from public school will be; administrators will react to prevent more flight. So GOOD public schools will see negligible impact from vouchers, while a very tiny movement of students can have a dramatic impact on BAD schools.

What impact? It's hard to say! Maybe changes in class size. Maybe increased willingness to fire incompetent teachers. Maybe larger classes, with higher pay for fewer (stringently chosen) teachers. Maybe single-sex classrooms, or reduced tendency to put problem students into mainstream classes (which actually harms the problem students as much as it does their classmates). Maybe any number of things I can't think of.

In addition, there is great potential for entrepreneurship to lead to genuine innovation. Small schools formed purely to collect those vouchers are not a bad thing: if they don't get the job done, then parents will withdraw the kids and send them somewhere else. Who knows what classroom models will be followed in those schools? But that's a good thing, you see: experimentation leads to innovation, which leads to improvement. And the profit motive can lead to lower cost methods of achieving equal or better results. A motive which is lacking in administrators who can always give the screw one more turn on the taxpayers.

And the kids can hardly be harmed by such experimentation more than they are already harmed by consistent application of methods we know full well don't work.

Jeesh Larry, I am a no-coder (with CSCE's waiting) and I do not think that same way as you are saying about him. As far as I am concerned, (with on exception) my opinions of people here are not swayed too much by what I see here, but actually "working them" on the air or a face-to-face contact is more where I start judging. I think that your statement below is too all-encompassing, and not true, unless you have personally met every single codeless tech. Then that kind of judgement would be more believeable.....

Happy New Years!

My response to this thread since I posted the question anyways...

Looking to set up my vehicle eventually as a multiband mobile (as that is all I can do until I move from where I am living now.)

The dream setup would be two rigs..... one 160-10m mobile all-mode, and one 6m/220/2m/70cm/33cm/23cm all-mode mobile. But that is dreaming at this point.

Maybe that would be the ultimate goal for the ARRL? After all, aren't these
the people (any elected officials that is) that we are going to look to for
defense, and support? Me thinks they would understand the hobby better if
they knew more about it if they were licensed also. I would almost join the
ARRL just to get a motion made to get that to happen.... :)

Very simple in morse.... KC8***/call district. On voice modes, callsign and the two words "mobile" and the number of the call district you are in. Ex: KC8PMX/4 or KC8PMX mobile 4. Short, sweet and gets the point across.

Why on Earth you Americans always take for granted that all hams
worldwide have computer and internet right next to their radio?
I am sure that at any given time, of all amateurs currently opearting on
HF bands not more than 10% are connected to internet. And many many have
not internet access at all.

If I am in the contest and I hear station K2G CQing, if I am multiplier
station I'll just walk over him, just another USA - Zone 5, no thanks I
have it. And poor guy is on Guam, a new multiplier indeed. How would I
know ? Internet ? Give me a break.

The other point, I'm located in XE, K2G as I would assume being NY or NJ
state station would be some 30ï¿½ (NE) the real K2G is on Guam, some 100ï¿½
to the left of NY state.

>>> Vouchers will just make it cheaper for the parents of
>>> kids already there, or allow the private schools to raise
>>> their rates.
>
>Vouchers will have no discernable impact on "elite" private schools.

Exactly! They're just a discount for those already attending.

>A
>voucher for $3K or so still won't get your kids into Choate Rosemary
>Hall, which probably charges $15-$20K per year these days.

Which means the poor won't be able to use those vouchers anyway.

>Some
>schools proably would raise tuition, both to capitalize on available
>money and to inhibit enrollment from folks they don't want. So what?

Vouchers are paid for with tax dollars, that's what.

>Parents who can afford Choate are not the targets of vouchers--it's
>the African American parents with children stuck in hopeless schools

>who will benefit.

And what schools will those kids go to? How many private schools exist for them, and how many of those schools charge the voucher amount?

>Note also that rich parents getting a $3K voucher are getting only a
>minor refund of their tax dollars; they're more than paying for their
>own vouchers. Those African American parents I've mentioned, who pay
>litter or nothing in taxes, are getting a positive benefit which is
>coming from the pockets of those with higher incomes. (Indeed, some
>conservative types object to voucher proposals for exactly that
>reason.)

The whole idea of public education is to guarantee a free, appropriate public education to all citizens, not just the rich. This is done because it's good for the society, not just the individuals.

>>> And that just drains off money from the public schools.
>`
>No, it won't: if the same number of students attend as last year, then
>the money will be the same. If half leave, the money will be
>halved--but so will the student body. Available dollars per student
>will be unchanged.

What if nobody leaves the public schools but all the kids now in private schools get vouchers? Where's all that voucher money supposed to come from?
>
>>> So low income parents get shafted as their kids get even crappier
>>> schooling.
>
>Crappier schooling than that already provided to inner city kids is
>pretty hard to imagine.

We're not just talking about the inner city.

>> Yup. I'd be all for vouchers if the private schools had to play by the same
>> rules as the public - for example, having to take any kid that wants in,
>> regardless of special needs.
>
>Excellent plan. Let's stack the deck so that private schools will
>become as rotten as public schools, and then let kids go to any school
>they choose.

Are you saying that kids with special needs make a school "rotten"? Sure looks like it!

The point is that if even one kid in a school has special needs (say, is in a wheelchair), the public school HAS TO acomodate the kid. The private school doesn't.

>Bwahahaha! (But not the schools that REALLY rich kids go
>to. Senators' sons still need a good education, if they're to inherit
>their papas' dynasties!)

>
>You both seem not to get it. The purpose of vouchers isn't to drive

It entertains me to know that is what you believe. It is evident that
you form many of your opinions based on what you feel. You have little
knowledge of ham radio or how it is regulated but you have endless
opinions.

Yep, that photo. How can I tell? Proportionality, Kim.
Proportionality.
Don't forget that you've told us your height and weight.

> Somehow, though, it strikes me as ironic that if I thought like you, agreed

Mike, we don't. When operating any event where our location is a
multiplier, we sign portable. For example, on Guam, I would sign
"N0iMD portable KH2."

For everyday use from Ohio, I don't sign, "portable 8," and am guilty
as charged.

No, not at all. We did find plenty of accomodating amateurs to
provide the boys with some interesting perspectives on their world. I
recall one who was on a cruise through the Islands and spoke to the
boys for about 45 minutes. He answered every crazy question teh boys
came up with. He was a good sport.

Only there were no other BSA stations on when we were on. That would
have been sweet.

But they represent you to the FCC.

And if you didn't give them money, they couldn't be DXCC for the
world, as you claim.

Yet I was authorized to operate there, by my commander, just as the
requirements on the ARRL web site state. If DXCC doesn't accept it,
so be it.

I wasn't there for DXCC or Duck Hunting.

Kim, actually, the Buro is the easy part. Trying to mail direct to
some foreign countries takes quite a few dollars in postage, and if
you sweeten it with a green stamp or two, the mail is subject to
pilferage.

Buro is the way to go. But some countries don't have a Buro, and if
they do, the amateur must be a member of the countries amateur radio
society. So in the USA, less than a third of amateurs could get cards
- if the ARRL ran it that way. France does it that way, I think.

Personally, I don't put anything in the log book that I didn't work,
and my log books are good enough for me.

Nah.. More like eight years. And that doesn't change shit. The UNIX-systems are still pretty much the same by design.. But Mitnick wasn't so damn great.. As far as I know he didn't wrote any tools himself.. A little scriptkiddie pherhaps? :)

Anyhow.. The repression from the state in this case is horrible, as in most cases when both hackers and US.gov is involved.. And the US state talks about their freedom.. Pff.. ;)

>And poor guy is on Guam........

The 'poor guy' using K2G for a contest in Guam deserves to be ignored.
If he's using K2G, he specifically asked for K2G. And if he asked for
K2G for a contest in Guam, he doesn't know much about contesting.

K2G is a 'special' call sign that should be used by the Girl Scouts in
New Jersey, not a contester in Guam. I doubt the intentions of the
three letter calls were to provide people with short calls for CQWW.

The call sign dilema currently being discussed is a result of the
Zero/Hero syndrome we have developed in amateur radio. Nobody
wants to be a zero. Everybody wants to be a hero. Thats why we
sign our email:

K0HAM, ex 9M2HAM, ex E21HAM, bla bla bla....... which in hamspeak
says:

I am now a Zero, but don't forget, I used to be a Hero........

The Zero/Hero system is a direct result of the fact that we aren't
interested in talking to other hams anymore, we are only interested in
obtaining post cards for DXCC clicks.

When I talk to you on my radio, I don't care WHO you are, I don't
care how interesting talking to you may be, I don't care if we have
anything in common, and I don't care to learn anything about you.
I only care if I need a post card from WHERE you are........

Anyway, if you intend to use K2G for a contest from Guam, don't
forget that appropriate phonetics would be Kilowatt Two Goomba.

Happy Holidays Walter.

> not internet access at all.
>

The lack of sales of the printed callbooks support the premise that the majority of hams who care about QSLing and getting awards do have access to computers so can use either a CD ROM callbook or access the Internet. If they don't have one of their own, they spend time at the library or other publicly available facilities using the computers there. You are, of course, aware that the printed callbooks have been discontinued due to lack of sales. The callbooks are only available on CD ROM and even that looks to be phased out as so many people simply access the data online.

It's like anything else in life. At some point, it proves to be necessary to go with the flow like it or not.

: does yours do Hans?

It's a reasonably good transmitting antenna given its footprint, but noisy
on receive (the curse of verticals!). To receive I use a horizontal loop
and during contests string some temporary beverages.

>>
>> (1) How do you figure that?
>
> There is competition to get into most private schools.

So what? You seem to be laboring under the illusion that vouchers are intended to enable any student in the country to go to any school in the country. That's absurd, and it's also irrelevant to the actual intent of vouchers.

>> And (2) what about the schools that open
>> in response to availability of vouchers?
>
> Compare the amount of most proposed vouchers to the typical tuition of a
> decent private school.

Fairly glib answer. There are plenty of private schools with tuition in the <5K range, including most charter and Christian schools. And don't forget the parents who could cough up a grand or two, but not five. Finally, don't forget that a school catering to parents with vouchers will charge accordingly: 20 students times $3K is $60K per year--enough to pay a teacher $40K, cover expenses, and net $10K per class, even without larger class sizes or creative cost containment measures.

So you seem to be arguing that (1) vouchers won't enable anyone to afford any private school unles they could also afford it without vouchers, and (2) even if they could afford it, there's nowhere for them to go. Neither statement is self-evidently true--in fact both are wildly false. You are essentially attacking the straw man position that with vouchers, all kids would go to Deerfield, Stoneleigh-Burnham and Choate.

>> Vouchers will have no discernable impact on "elite"
>> private schools.

>
> Exactly! They're just a discount for those already attending.

Right--which is irrelevant to the voucher discussion.

>> A voucher for $3K or so still won't get your kids into

> Which means the poor won't be able to use those vouchers anyway.

AT CHOATE. So what?

>> Some schools proably would raise tuition, both to
>> capitalize on available money and to inhibit enrollment
>> from folks they don't want. So what?
>
> Vouchers are paid for with tax dollars, that's what.

So what? Those same rich parents are paying for their vouchers 100
times over in their disproportionate tax burden. The real
beneficiaries of the program are folks whose vouchers exceed their
total tax liability.

> The whole idea of public education is to guarantee a free, appropriate public
> education to all citizens, not just the rich. This is done because it's good
> for the society, not just the individuals.

And it fails miserably. We are churning out illiterates (and corpses)
at a frightening rate, and we're not even doing it cost-effectively.
Producing an illiterate graduate can be done for considerably less
than $30,000 per child. Interestingly, you are defending an expensive
monopoly which is an abject failure at its stated intent. If your goal
was to keep minorities down, you couldn't be approaching it more
effectively than you are.

> What if nobody leaves the public schools but all the kids now in private
> schools get vouchers? Where's all that voucher money supposed to come from?

You raise an interesting question here. This question is really an
admission that rich people are paying for others' education, while
deriving no benefit whatsoever from the tax dollars they pay into the
public school system. For example, I pay property tax to the school
district, but have no child in the public school--while apartment
dwellers, however rich or poor, get a free ride. It's an interesting
issue indeed that you raise, but I don't think we can easily address
the inequities in school funding in this thread.

>> Crappier schooling than that already provided to inner city kids is
>> pretty hard to imagine.
>
> We're not just talking about the inner city.

We aren't? I was.

> Are you saying that kids with special needs make a school "rotten"? Sure looks
> like it!

Oops...I wish I'd read this far before replying to any of your other
stuff. I didn't mean to waste my time on an idiot who likes throwing
ad homina around. Have a nice day.

One of the most exciting evenings I spent in a bar was in Hong Kong back in 1976 (or was it 77 ?). It was a topless place -- was featured in a James Bond movie.

Anyway, there was a crowd of South Africans, a bunch of Aussies, some Kiwis, and a few stodgy Brits. The fun began when one of the assholes -- excuse me, I meant to say "when one of the Brits" -- announced that they were all part of the same Commonwealth and it was time for a toast to the dear old Queen.

At which point one of the South Africans -- obviously a student of the Rev. Wm. Archibald Spooner -- stood up and toasted the "queer old dean" and announced that the Commonwealth could kiss his South African ass (I did not realize he had his donkey with him).

This led one of the gents from the former American colonies to ask an Aussie why they played football in shorts.

At that point the place erupted into one big family squabble that was finally decided by the appearance of the Hong Kong police.

God, those were good days . . . . then the Chinese commies took over.

Give that man a cigar! "KR8" was the only exception to the "K$6" scheme of
Pacific possession/protectorate call signs.

We know that KG4xx was (and still is) the Navy-assigned prefix for amateurs
at Guantanamo Bay, Cuba. The Navy also used the KG1xx series of calls.
Where were "KG1xx" sailors stationed?

The KA#xx, like KA6AA, calls were assigned by US military to servicemen
stationed where? There license grant prohibited them from communications
with what country?

Gawd, I remember that but just can't remember !!! Seems like it was some ichi-gawa enclave related to Ryukus (sp).

Silly me, I still light up at KG1s hoping they are Greenland.

As for those zero calls like K0HB, wasn't the zero call area something stolen from the REAL 1-9 hams?

And as for this idiot 1x1 call that some goober requested for his USVI "DXoperation"...a guy that unattuned to DXing. You probably won't hear such a measly guy anyway and its not likely that you'll suffer for missing this contact.

Dave, world travel--in and of itself--does not mean that one has experienced life. I suspect your "world travel" as you call it was as much in a vacuum as it could possibly be; since I gather that much of your world travel was as an employee of the US Govt. Not sure what freedoms you allowed yourself to really get out and meet and greet the countries you were in. I know many military folks who would have loved to get to know the *real* people and places they were--rather than only an enemy and a war and their results.

You strike me, and always have, as a very arrogant elitist. You don't allow others much thought different from your own; feel compelled to call them into question; set their mistakes as examples while setting yourself apart from your own. You seem to be a very selfish individual with only an agenda of superiority over anyone whom you view to be "in your way." You constantly bring up things such as that *you* are a DXer and *you* have traveled the world, blah, blah, blah. That means nothing to many people, and why should it?

Truth lies somewhere in the middle of extremes, Dave, and you are definitely an extreme. Much of what I post to you is done so as much--if not more--to be as contrary as I can possibly be to you. Because it bugs you. And, because I suspect people like you need shocking once in a while.

>
>And it fails miserably.

I disagree. While some public schools are awful, most are not.

And the fact remains that private schools can pick and choose, while public
schools cannot.

Tell ya what - give any public school system the right to expel or not admit
students at their sole discretion, and watch the quality of those public
schools soar. They'll cherry-pick the good students just like the private
schools do.

>We are churning out illiterates (and corpses)
>at a frightening rate, and we're not even doing it cost-effectively.

Who is "we"? The school district I live in churns out very well educated
students from its public schools. No illiterates that I know of, and no
corpses. We take pride in our schools - all of them.

>Producing an illiterate graduate can be done for considerably less
>than $30,000 per child.

We spend a lot less per year to produce very literate ones.

>Interestingly, you are defending an expensive
>monopoly which is an abject failure at its stated intent.

No, I'm showing the inherent unfairness of comparing public and private schools
as if they were playing on a level field. They aren't.

> If your goal
>was to keep minorities down, you couldn't be approaching it more
>effectively than you are.

Let's cut to the chase: Do you support the idea that every child deserves a
free, appropriate public education, regardless of economic status, minority
status, or disability, or not?
>
>> What if nobody leaves the public schools but all the kids now in private

Untrue.

> For example, I pay property tax to the school
>district, but have no child in the public school--while apartment
>dwellers, however rich or poor, get a free ride.

No, they do not. Apartment dwellers pay property tax indirectly. The landlord
pays the property tax, which money is derived from apartment dwellers' rents.
The apartment dwellers don't get an income tax deduction for the property tax,
but homeowners do.

>It's an interesting
>issue indeed that you raise, but I don't think we can easily address
>the inequities in school funding in this thread.

School funding is the entire issue. With enough funding, every child could be
given a full-costs voucher for whatever school they wanted to attend - public,
private, religious, or whatever.
>
>>> Crappier schooling than that already provided to inner city kids is

You're avoiding a question that is central to the whole problem. Who deals with
the special-needs kids? The private schools can ignore them, while the public

schools can't.

I'm not throwing ad homina at anyone - just pointing out what your quote looked like. Shall I dig up the exact paragraph from Google?

Then you let your imagination run wild with you, Dave. When that photo was taken, I was around 155-160 lbs., still the same height, and--as ever--beautiful. I have gained weight since then. I eat a lot more, and don't play as hard as I used to. I now weigh 220 lbs., down from 235 lbs., and hope to lose even more. What do you look like, Dave, and should it matter to me? Would it make a bit of difference to me about your posts and how I think of them? I suspect that, between the two of us, you are the one stuck on how someone looks.

> >

>

I removed the photo because there are enough crazies on this newsgroup that knowing what I look like concerns me, Dave. Is that OK with you? I am a very opinionated person, and saw people threatening each others' jobs and personal safety back then. Is it quite all right with you that I have it off, Dave?

> >
> > Why *would* you say anything about someone's ass, Dave? And mention

I don't think rereading a comment from you would explain anything about why looks matter and why you would comment on them. But, have fun thinking my ass anyway.

You ignored my last on the WB6XX. I'm going to say that both KR6 and KR8 were Ryukyu (Okinawa) but that the KR8 callsign indicated that the holder was a Japanese citizen of the islands while the KR6's were the Americans. How'd I do?

From old callbooks, Logbooks, old DX buddies:
For KG1 -- KG1 US Forces in Greenland

For KA#xx KA# - US Forces in Japan Now JA (Foreigners now 7J)
KA1 was Phillipines
KA2,3,4,5, and 8 for Honshu.
KA6 for Shikoku
KA7 for island of Kyusho
KA9 for Hokkaido
KA6 Ryukyu Islands, Okinawa
KA0 Iwo Jima. Now JD1
I believe that Japanese law forbade JA's to QSO KA's and vice versa

How about NY4 -- issued way back before US hams routinely got N calls
--
I Doubt, Therefore I Might Be

Ryan:

A "no-coder" is a very specific thing. It is a person who doesn't simply
dislike and not use the Morse code and has a personal opinion against
code testing. A "no-coder" for the purposes of this newsgroup is someone
who considers the Morse code and the CW mode, and those who support
same, to be patently evil. Is this what you think? If not, then the post in
question didn't apply to you. In fact, the total number of "no-coders" that
it would apply to would be a very small number of the total ham
population. However, since they are also a highly vocal minority, they
take the heat they deserve in this newsgroup and elsewhere.

Jim:

Tuner, yes -- an MFJ 949E. The antenna will already work OK on 20 or 10 as
it is, but I use the tuner just to take it down to a dead-flat match or to get
it to
serve as a semi-radiating dummy-load on 40-meters.

>bands
>described requires a better antenna, not a lower loss feedline.

Hmmm. Hadn't thought about from the noise angle. OK, Jim -- you win!
Shall I send the Cupie doll to your callbook address?

BTW -- I've thought of trying some 450-ohm ladder line to feed my dipole, but the total length would be around 15 feet. Is this good or bad? Am I going to have a "radiating" feedline? Currently the antenna is fed by a scrap piece of RG-58 about 12 feet long. I also have heavy-duty 300-ohm twinlead -- would that be just as good? I'm also thinking about creating a new dipole which would be a half-wave on 40 meters, but it would have to be folded quite drastically. What are the issues here?

They were part of the "none of the above" too...

In this past November election, Oregonians soundly defeated an initiative proposal that would have provided a "none of the above" choice in judicial elections. Most of us saw that it and its proponents and supporters were pretty stupid.

>Maybe that would be the ultimate goal for the ARRL? After all,

One of the five Oregon congressional representatives is a ham. Other than his support for the CC&R preemption bill, I don't respect his political stands on other vital issues. Fortunately I'm not in his district and I do respect and agree with most of the positions that my district congressrep takes.

Trent Lott caused no problems because of apologies, Larry, and how keen of you to miss that entirely. Trent Lott opened mouth when he shouldn't have--for him. Which reveals a lot about the abilities of people like Trent Lott and you. Other than someone's feelings about something, what they say and when they say it says a lot for just how regarded they *should* have been all along. Trent--for him--was pretty damned stupid to say what he said and I am sure he kicked himself in his ass the minute he did so. If he was pretty stupid at that moment, has he just been lucky all the other moments in his career? I suspect so.

That goes down as one of the dumbest things you've ever written. I
wasn't on a "See Europe in Ten Days" trip, Kim. I lived in a country
for two to three years at a time. I didn't shop in a PX, I bought on
the local economy. I'v travled the countries to which I've been
assigned, traveled the adjacent countries, mingled, talked, eaten and
slept.

> Not sure what freedoms you allowed yourself
> to really get out and meet and greet the countries you were in.

You'll likely never be sure.

> I know many
> military folks who would have loved to get to know the *real* people and
> places they were--rather than only an enemy and a war and their results.

Good for them.

> You strike me, and always have, as a very arrogant elitist.

That is something you'll have to deal with, isn't it? This would seem
to be another time when you feel something and are wrong about it.

> You don't allow
> others much thought different from your own;

I don't control the thoughts of others.

> feel compelled to call them into question;

...only if I see them as incredibly stupid.

> set their mistakes as examples

...that depends entirely upon the attitude of the other individual.

> while setting yourself apart
> from your own.

Let's see. There was my prior marriage and a few typos here. I'll
admit to both.

> You seem to be a very selfish individual with only an agenda
> of superiority over anyone whom you view to be "in your way."

Do you consider yourself to be "in my way"? I don't. I do find that
you often shoot from the hip without thinking things through. I've
noted that you often form opinions based on little or no knowledge of
the subject. I find that you are the type to choose a tacky callsign
and then bray to the world that you don't care what anyone else thinks
about it. I find that you can be coarse or vulgar in any venue. Which
one of us exhibits selfish traits?

> You
> constantly bring up things such as that *you* are a DXer and *you* have
> traveled the world, blah, blah, blah. That means nothing to many people,
> and why should it?

Constantly? I don't think so. Both of the things cited by you happen
to be true. I am a DXer. I've been a DXer for decades from both sides
of the pileup. That can't be disputed.

I have traveled the world. It is a fact. I have four diplomatic
passports and two tourist passports filled with entry and exit stamps
and visas for various countries. If it bothers you, learn to deal with
it.

> Truth lies somewhere in the middle of extremes, Dave, and you are definitely
> an extreme.

As determined by you? There's probably a homeless guy somewhere feeling
sorry for me too.

> Much of what I post to you is done so as much--if not more--to
> be as contrary as I can possibly be to you. Because it bugs you.

It does? Shouldn't I begin to feel bugged? Why then do I usually feel
that you are loopy?

> And,
> because I suspect people like you need shocking once in a while.

...sort of like what you told us you wanted to say to some women at
cocktail parties, Kim? You do a lot of things for shock value, don't
you? Your callsign is an example.

Old Arrogant Dave K8MN
sitting up on top of the hill eating from the fine china using the best
sterling ware while swilling expensive bordeaux from the Belarussian
lead crystal we bought in Tallinn.

"I wonder what the poor did for Christmas?"

I have plenty of friends who are overweight though I've never heard any
describe themselves as "as ever--beautiful". I carry some extra pounds
and have never described myself as beautiful. I'm about fifteen pounds
heavier than you but I'm nearly a foot taller.

My comment had nothing to do with looks mattering. See how you tend to
expand things because you "feel" them? My comment had to do with you
not being able to understand something even if it whacked you on your
stern.

> But, have fun thinking my ass anyway.

Oh I am, Kim--though probably not in the way you meant.

Jacinta, I must beg to differ with you. There are NO self-respecting, unmarried Mexican babes, in shape or out (mostly out...short and squat... in these parts) who wouldn't marry a fat, drunken, slovenly, rich or poor American man IF (like Sid, the New Mexico ham with the Mexican squaw) it meant they could get a Green Card to give themselves and their extended families a legal "GO PAST GO" card to legally cross the border and escape their hopelessly depressing 3rd world poor and corrupt surroundings. It doesn't matter what these babes personally prefer in terms of looks, it's the chance to make the big USA bucks that matters most. They're all gold miners, just like USA women. Good taste is not the issue. Once in a great while I see a nice looking Latina (usually NOT from Mexico or Guatemala, however!). No, I would much prefer a smart, petite and pretty Asian women any time of the day or night, and guess what..the majority of them are smart, petite and pretty, unlike your basic Mexicana/Guatemalan women.

Now that I think back on it, I used to post via a program called
"7plus" very small picture files on packet for world wide distribution.
A comet hit Jupiter in 94, and I got many images of that off the Internet.
Many were blurry, so I could shrink the images without losing
visual information. Then they became jpgs a few K large. Then
the 7plus program would split the jpg file into several pieces and
also prepare them to go thru a 7 bit ASCII channel. I'd get lots
of error reports, almost all were identical. Which would lead me
to believe that a machine nearby yours tended to corrupt the
data before it got to most of the rest of the world. I used to
download the posts I just uploaded to be sure they got into
your machine correctly.

And my machine was a 486 running windows3.11, a Kantronics
TNC, a modified Motorola HT220 and a Jpole antenna hanging
on the wall in my apartment.

Speak for yourself, white man. In Minnesota renters get a tax credit based
on the real estate taxes paid by their landlord.

Jim, at least in my area, "Charter" schools have (had) been
springing up like weeds for a while now. They are a hoot. They run a
gamut from schools with superior children of superior parents, to
schools which mysteriously neglect to teach certain controversial
aspects of science. They really want the vouchers. They take the
school district to court. They use the bus service. Oh by the way, on
the required testing, they have NOT been doing as well as the other
children in the area. Fortunately, they are now dwindling a bit.

Oh, and yes, our taxes are going up quite nicely to support
all this.

Let's see, we have a poor Black family in a small town (the
people this program is supposed to benefit IIRC) they don't like the
school their children are going to. So with Dad and Mom both working
for say - minimum wage - they are going to send the kids where? 3000
dollars is going to pay for what school? Where?

Wow, talk about irrelevant statements! You take Jim to task
with several "so what's" and then and then throw in this? Lets see, if
the amount of taxation is relevant to the voucher issue, then perhaps
the people who pay the most in taxes should get their shildren's
entire education paid for? Ridiculous? you bet.

Dear Reader,

You may be getting tired of the endless Heil - W5TIT nattering, but
you may not know how to kill all such threads with a news reader which
supports regular expressions in its filtering rules. The answer is
simple: Filter on the references header, and filter on the sequence
of references. A useful regular expression pair is

References: .*airnews\.net> <.*earthlink\.net>

and

References: .*earthlink\.net> <.*airnews\.net>

with your filters set to kill all posts for which either condition is
true. The pair of rules also has the added advantage that any
followups to a Heil - W5TIT ego battle thread are also killed.

Extension of these rules to include other ego battling pairs of users
should be obvious.

Happy nattering-free New Year!

>>> lbudney-google@nb.net (Len Budney) writes:
>
> Then what IS the intent of vouchers? To allow some students to have a
> tax-funded choice of public or private schools?

To put competitive pressure on public schools to change. That doesn't require many students to exercise the option: its existence is one form of pressure. And its exercise on a smallish scale is another form of pressure: parents with some gumption can drive their kids to a better school district and use the vouchers there; parents with some money can add the voucher and pay a private tuition; many Christian and charter schools can absorb students at the value of the vouchers; parents can threaten the school board with the exercise of their new prerogative; other options exist besides.

Indeed, schools are already feeling pressure from the home-schoolers, and they're yelping like they were being tortured. That pressure may have a strong positive effect on schools, though it's a bit early to tell--but it's telling how amazingly angry educators are about it! The sad thing is, the pressure is not being brought to bear on minority school districts, where parents don't have the resources to home-school.

> I'm arguing that vouchers won't create a viable alternative to public schools
> where such alternatives are most needed.

You've said it, but you haven't begun to make a cogent argument why it's true. You're just pretending that the world is all full up.

What's tedious about this conversation is that you aren't really introducting a logical argument for your position. If you tried to prove logically that there is no place for anyone to go except public schools, you'd realize (I hope) how ridiculous that is and desist. But instead you resort to jibes instead of argument, like "If there's anywhere to go," or "If anyone gives a darn," or "As long as handicapped children are euthenized, maybe," etc.

> Are there quality private schools all over the country just waiting for
> voucher students?

Are you insane? There are thousands and thousands of charter and private schools out there--almost a dozen in the nondescript town I grew up in. Each can absorb a few, and a few is enough to terrify a

school board that was complacent in its monopoly power over its
powerless students.

If ONE classroom's worth is depopulated in a rotten school--just 30
kids--what do you think its administration will do? It's hard to
justify a $128K superintendant's salary in the face of such flight...

>> You are essentially attacking the straw man position
>> that with vouchers, all kids would go to Deerfield,
>> Stoneleigh-Burnham and Choate.
>>
> Nope. I don't know any of those schools.

Agreed--you don't seem to know much about what's out there, but from
your position of ignorance you're pretty sure that what's available is
"nothing".

>>>> Some schools proably would raise tuition, both to
>>>> capitalize on available money and to inhibit enrollment
>>>> from folks they don't want. So what?
>>>
>>> Vouchers are paid for with tax dollars, that's what.
>>
>> So what?
>
> So the taxpayers - all of them - should have a say, don't you think?

In what? The administration of every private school in the country? In
who gets to go to school where? You sound like you'd be more
comfortable in Cuba.

By the way, as ill-articulated as this point of yours is, it's why I'm
dead against vouchers. Too many Americans, like you, can't distinguish
socialism from freedom, and would use vouchers as a lever to impose
their ideas on private schools--and the result will be a rotten
education for everyone, pulling the good schools down to the level of
the public schools. A smart private school would refuse vouchers
outright--but ironically, it's YOU who would argue, under the
circumstances, that schools may not refuse vouchers because it is
discriminatory.

>> Those same rich parents are paying for their vouchers 100
>> times over in their disproportionate tax burden.
>
> How? Quote us some figures to show how rich folks are paying "100 times over".

Define "rich", first. There are plenty of folks a few towns over from
me whose PROPERTY taxes are over $10,000, and whose INCOME taxes are
over $100K--plus a township tax of $10K, and a state tax of about
$28K. I'm guessing that you have very little clue what the
distribution of the tax burden looks like in this country.

>> The real beneficiaries of the program are folks whose
>> vouchers exceed their total tax liability.
>
> If and onbly if they can actually use the vouchers.

No. Those parents win when the administration begs them not to use
their vouchers, and listens respectfully to their demands.

> I disagree. While some public schools are awful, most are not.

Except, ironically, that the "some" include essentially ALL inner city
and minority districts. You can only call that a partial victory if
you don't mind seeing ALMOST ALL minorities deprived of a decent
education, "since after all there aren't that many of them."

> Tell ya what - give any public school system the right to expel or not admit
> students at their sole discretion, and watch the quality of those public
> schools soar. They'll cherry-pick the good students just like the private
> schools do.

There are also many private schools specifically for problem students.
Why does it surprise me that you're ignorant of that fact?

> Let's cut to the chase: Do you support the idea that every child deserves a
> free, appropriate public education, regardless of economic status, minority
> status, or disability, or not?

This question is irrelevant to your central claim, which is that
public schooling is the only way on earth to achieve this goal.

>>> What if nobody leaves the public schools but all the
>>> kids now in private schools get vouchers? Where's all
>>> that voucher money supposed to come from?
>>
>> You raise an interesting question here.
>
> Then answer it.

Couln't begin to, under the circumstances: you are laboring under
ignorance along every important dimension: you think that the world is
chock full of students; that all possible non-public education spots
already exist and are already taken; have no knowledge of the relative
tax burdens of various citizens; have no idea of the relative
distribution of children among various classes; and don't know the
first thing about what it actually costs to educate somebody.

In my college days I enjoyed the way kids would chew the fat in coffee
shops, solving the world's problems--a feat made all the easier by
their complete ignorance of the nature of the problems themselves. I
no longer enjoy the useless habit of coming together to pool
everyone's ignorance and hope that an answer will pop out. And I'm
tired of addressing your knee-jerk answers to serious, non-trivial
questions.

> You're avoiding a question that is central to the whole problem. Who deals
> with the special-needs kids?

I'm not ignoring them. It's possible that the public schools will continue to deal with them--but will be forced to provide appropriate specialized care, if parents are no longer forced to tolerate the hindrance of their childrens' education that results from mainstreaming children who can't handle the academics.

On the other hand, private arrangements are possible. In one elementary school I attended, the care of the mentally retarded was semi-privatized. The Datahr program had the use of classroom facilities, but kept special needs kids separate and provided appropriate care, with extensive support from charities, volunteers and other sources. Worked fairly well, actually.

That's the fundamental question you're ignoring here. When people are free to come up with answers, they come up with answers you didn't anticipate. The instinct of a socialist is to say, "I can't think of another way. There IS no other way. Anyone trying another way will be severely punished."

That's basically why many conservatives oppose vouchers: it's a redistribution of wealth.

I oppose vouchers because they will give the federal government a whip to crack over private schools. It's always the same story: "Here's some money. Like it? Good! Now...HERE are some conditions, if you want to keep getting it..."

Um, Mike, the question "Who is paying for it?" is indeed relevant.
It's why many argue (accurately) that vouchers are unconstitutional:
they are a redistribution of wealth. What makes it seem so irrelevant
is the fact that we have so much redistribution already, that
protesting against more of it sounds ridiculous.

> Jim an idiot? I think not.

Maybe not. I have no idea why he can't frame a cogent argument on this
subje

> He's one of the more thoughtful people here.

That's sure saying a lot!

> And he doen't resort to calling people names when losing
> an argument.

Losing? Under the circumstances, it wouldn't be fair to say we're
HAVING an argument. The point to be affirmed or denied has never been
clearly specified, and Jim is not making any arguments--only some
"observations" which lack context. If he tried to affirm, "That there
is no room for any more children in private schools, and never will be
under any circumstances," then we could see what his argument is
exactly--at the moment, we only have this bare assertion of his, whose
absurdity is evident on its face.

>
> How many poor people send their children to private schools?
> Here is wher I think voucherfare falls flat on it's face.

The question is asinine on its face. How many poor people drive ferraris? They don't because they can't.

The relevant question is, "How many WOULD, if they had a check for $3K in their hands?" Remember, though, that "private school" is a red herring: most voucher proposals include the option of sending their child to a public school in another district.

I wonder if that's the reason for the opposition from Democrats? "Oh no! Carpools full of black kids coming to school with MY JOHNNIE! We'd better do something!"

>> Vouchers are paid for with tax dollars, that's what.
>
> ANd what exactly is the idea of the government taking money
> from people and then giving it back? As soon as that happens there are
> strings attached.

Yes, those are the two problems! Taking it and then giving it back--to people who didn't pay it in the first place: that's "redistribution of wealth", which is explicitly forbidden in the Constitution. And, as you notice, they give it back with strings attached. Those are both cogent reasons why many conservatives oppose vouchers.

> Jim, at least in my area, "Charter" schools have (had) been
> springing up like weeds for a while now.

Impossible! Jim already demonstrated with inescapable logic that the private schools are all full, and there will never be another one!

> They are a hoot. They run a gamut...

Human endeavors usually run the gamut...

> Let's see, we have a poor Black family in a small town (the
> people this program is supposed to benefit IIRC) they don't like the
> school their children are going to.

Right...a majority of African Americans favor vouchers for that reason--despite Jesse Jackson's efforts to tell them it's a Bad Thing.

> So with Dad and Mom both working for say - minimum wage...

You are already off base here. About 70% of black kids are not raised in two-parent families. So erase the Dad if you want a more representative description here.

> - they are going to send the kids where? 3000 dollars is going
> to pay for what school? Where?

"In my area, 'Charter' schools have been springing up like weeds for a while now..." --Mike Coslo

But don't forget parents who care enough to carpool to a better school district--meaning, usually, a "white" school district. *Your* school district, maybe.

I do not and did not claim that you were a bootlegger based upon
violation of DXCC rules. You were a bootlegger because you have no
documentation to support your claim that you had permission to
operate. You have no military or UN issued paperwork? Too bad.

>
> Then you have nothing to bitch about.

...other than your claim of operating from Somalia without written permission from someone authorized to do so.

To summarize:

It is apparent that only you, of all individuals operating from Somalia during that time period, neglected to get permission in writing from someone authorized to grant it. That it never dawned on you that this would be the thing to do, marks you as a rube.

How many or you, or should I say does anyone know the
full story behind U.S. amateur radio operations in Iceland? This
question applies to the "Agreed Area" only. "Agreed Area" is the
term the U.S. and Icelandic governments use when referring to
the NATO base at Keflavik. It is an interesting story and
illustrates how ham radio bickering and envy exists even at the
international level. HINT: The dispute involved call sign
usage.

Back To The Subject Title
First there is no reason to do away with CQ -- it is traditional and
understood by the Amateur Radio Community world wide. Learn the protocol
before trying to change it and then it will be a lost cause. Hams are going
to use Handle (name) no matter how much you object.

Second -- say want you are seeking (HF)
CQ - invites any Ham Station Anywhere for a contact and possible ragchew
CQ DX (outside USA) Or CQ DX Asia
CQ Alabama for Worked all States
CQ Boston MA and Vicinity (for whatever reason maybe Ham Stores)
CQ for a short QSO- Testing Station
CQ DX -- No QSL's Only A QSO (should generate a real pileup)
CQ East Coast USA - Checking Propagation
CQ 10/10
ETC

CQ Dog Lovers -- is stretching it

CQ is NOT used on local VHF - its FM channelized and no need for it. 6M -yes
2M tropo or meteor yes.

I know that we used the prefix "KG1" there for a number of years just as we use "KG4" in Cuba, and this was probably written into the SOFA, but beyond that I don't know a "full story".

We had a similar SOFA in Japan which assigned the "KA#" prefixes, and I dimly recall that "KG3xx" was also briefly used by US forces, perhaps in Greenland?

Our SOFA with Germany was different in that it assigned calls which came out of the host country prefix block.

>I prefer to automate the process...(SNIP)

Fine. That's your preference. Still leaves you as an anonymous coward. A punk. A putz.

>And you should realize that a man like yourself who uses an AOL news
>reader is hobbling on crutches and lacks the necessary experience to
>intelligently critique anyone else's Usenet methodology.

Oh..I see..You're so "net-savvy" so it makes it OK for YOU to suggest that everyone else cut out Dave and Kim's exchanges, but I suggest you just ignore them and I am "on crutches".

Beats having the crutches where a proctologist dares to tread, such as yourself, Anonymous Putz.

>What a net-fool you are: You are so very foolish that you are clearly
>incapable of understanding the realities of the net. It would be an
>exercise in futility to try and explain them to you.

Sounds like yet another Lennie-ghost. Never fails...Lennie "disappears" and the anonymous putzii flourish...Lennie "reappears" and the ghost disappear...Hmmmmmmmmmmmmm........

>Instead, welcome to my kill file.

I'll run right out to my Doc's office and get a script to help me with all the sleep I wuill lose over being in some Anaonymous Coward's killfile.

I love how these testicleless creeps pop out from the woodwork with
anonymous addresses, suggesting that "real" people be killfiled.

This guy is in the same category with those who mislead people into
thinking they served in the Armed Forces or were "Special Forces" when all they
did was peel potatoes for three years.

Loser with a LARGE "L".

>
>I operated exactly to the ARRL recommendation.

Except that you do not have ONE shred of evidence that you had SOME
authority to operate except "my commander said I could".

In a "nation" where street murders, kidnapping and bribery are all daily
fare, I am sure your Amateur Radio activites went unnoticed. However in the
eyes of the International community, you were unlicensed and operated without
authority.

>> In fact, you have nothing which supports your operation from Somalia.

Yep, I'm quite happy with my DX activities as well. I only wish I
knew why the other DXers on here get so upset about everything all the
time. Perhaps its something as simple as a lack of fiber in their
diet.

Happy New Year.

Now, Dave, you should know as well as anyone that you have to have a
piece of paper with someone's signature on it to back up such claims.

I think that an application for DXCC is that piece of paper.

So, of all the amateurs worldwide, how many have submitted for DXCC?

Of all the DXers worldwide, how many have submitted for DXCC?

Or do you have some other way to measure it?

I listened to Rush one day. A woman called in to complain that Rush
was always blaming welfare on blacks. He denied saying any such
thing, and reminded the woman that far more whites are on welfare than
are blacks.

So what was your point about "welfare mothers of clolor with their
hands out?"

I disagree. There is nothing at all wrong with "CQ from K8MN" on 2m or 70cm FM, especially on a simplex calling frequency. Beats the heck out of "monitoring" or "listening". Everyone is doing that whether they announce it or not.
